**Canada's Total Trade:**—The Dominion's total trade for July, 1936, amounted to \$138,789,000, compared with \$109,208,000 in July, 1934, and with \$113,247,000 in July, 1935; the increase for the month of July, 1936, over the same month in 1934 amounting to \$29,581,000 or 27.1 per cent, and over the same month in 1935 to \$25,542,000 or 22.6 per cent. Canada's total trade for the twelve months August-July, 1935-36 amounted to \$1,520,404,000, compared with \$1,213,669,000 for the same twelve months period in 1933-34, and with \$1,296,940,000 for the same period in 1934-35; the increase for the twelve months of 1935-36 compared with 1933-34 amounting to \$306,735,000 or 25.3 per cent, and compared with the same period in 1934-35 to \$223,464,000 or 17.2 per cent. Canada's total trade in each month of the period August-July, 1935-36 shows an increase over the corresponding months of the same period in 1933-34 and 1934-35.

**Canada's Total Imports:**—For the month of July, 1936, Canada's total imports amounted to \$53,821,000, as compared with \$44,144,000 in July, 1934, and with \$48,414,000 in July, 1935; the increase in July, 1936, over the month of July, 1934, amounting to \$9,677,000 or 21.9 per cent, and over the same month in 1935 to \$5,407,000 or 11.2 per cent. For the twelve months period August-July, 1935-36, Canada's total imports were valued at \$589,153,000, compared with a similar import trade during the same period in 1933-34 valued at \$489,129,000, and compared with the same period in 1934-35 at \$530,722,000; the increase for the period, August-July, 1935-36 over the same period in 1933-34 amounting to \$100,024,000 or 20.4 per cent, and over the same period in 1934-35 to \$58,431,000 or 11.0 per cent. For each month of the period August-July, 1935-36, the Dominion's total imports show an increase over the corresponding months of the same period in 1933-34 and 1934-35, except for December, 1934-35.

**Canada's Total Domestic Exports:**—Canada's total domestic exports for the month of July, 1936, amounted to \$83,899,000, compared with a similar export trade in July, 1934, valued at \$64,398,000, and with the same month in 1935 at \$63,286,000; the increase for the month of July, 1936, over July 1934 amounting to \$19,501,000 or 30.3 per cent, and over the same month in 1935 to \$20,613,000 or 32.6 per cent. The total domestic exports of Canada for the twelve months period August-July, 1935-36 were valued at \$918,751,000, compared with \$717,715,000 for the same period in 1933-34, and with \$756,922,000 in 1934-35; the increase for the period August-July, 1935-36 over similar period in 1933-34 amounting to \$201,036,000 or 28.0 per cent, and over 1934-35 to \$161,829,000 or 21.4 per cent. The domestic exports from Canada during each month in the period, August-July, 1935-36 exceeded similar exports for the corresponding months of the same period in 1933-34 and 1934-35.

## TABLE OF CONTENTS

### REVIEW OF CANADA'S FOREIGN TRADE, 1936-37:—

	PAGE
Summary.....	7
Comparison of Value and Volume of Canada's Trade.....	8
Principal Imports into Canada, 1936-37.....	9
Imports of One Hundred Leading Commodities.....	10
Imports for Canadian Industry.....	12
Principal Exports from Canada, 1936-37.....	13
Exports of Eighty-six Leading Commodities.....	14
Distribution of Canada's Trade by Continents and Countries.....	15
Canada's Merchandise Trade Balance.....	18
Trade of Canada with the United Kingdom.....	20
Discrepancy between Canada—United Kingdom Trade Statistics.....	21
Principal Imports into Canada from United Kingdom, 1936-37.....	22
Principal Exports from Canada to United Kingdom, 1936-37.....	23
Trade of Canada with United States.....	24
Discrepancy between Canada—United States Trade Statistics.....	24
Principal Imports into Canada from United States, 1936-37.....	26
Principal Exports from Canada to United States, 1936-37.....	27
Exports to United States in Relation to United States Tariffs.....	28
Trade of Canada with Empire and Foreign Countries.....	31
Proportions of Trade in Raw and Manufactured Products.....	32
Exports of Gold in Canadian Statistics.....	38
Trade of Canada Compared with World Trade.....	39
World Trade in 1936.....	40
Canada's Position in World Trade.....	43
Production and Export, by Countries, of Canada's Principal Export Commodities...	46
Historical Summary of Canada's Trade by Decades.....	49

### CONDENSED STATISTICAL RECORD OF CANADIAN TRADE, 1936-37:—

#### Summary Tables—

1—Trade of Canada with All Countries, 1867-68 to 1936-1937.....	56
2—Trade of Canada with United Kingdom, 1867-68 to 1936-37.....	58
3—Trade of Canada with United States, 1867-68 to 1936-37.....	60
4—Trade of Canada by Main Groups, 1933-34 to 1936-37.....	62
5—Trade of Canada by Principal Countries, 1933-34 to 1936-37.....	64
6—Imports by Main Groups and Principal Countries, 1936-37.....	66
7—Exports by Main Groups and Principal Countries, 1936-37.....	69
8—Principal Imports into Canada.....	72
9—Principal Domestic Exports from Canada.....	75
10—Canada's Principal Imports from the United Kingdom.....	79
11—Canada's Principal Domestic Exports to the United Kingdom.....	82
12—Canada's Principal Imports from the United States.....	85
13—Canada's Principal Domestic Exports to the United States.....	88

## PREFACE

All features of previous issues of the Condensed Preliminary Trade Report are continued in the present number. It consists of two main sections—a Review of Canada's Foreign Trade during the fiscal year just closed (1936-37), and a series of statistical tables ("Condensed Statistical Record of Canadian Trade"), partly summary and historical, but mainly a presentation of the main items of the trade of Canada with the more important countries of the world.

In the first section, the external trade of Canada is examined from several angles and the outstanding features of the year are set out in both text and tabular form. This section also contains an historical summary of Canada's import and export trade by decades for 1889-90 to 1929-30 and for the fiscal year 1936-37, distinguishing imports and exports for principal countries and commodities.

All tables have been revised and expanded to meet altered conditions of trade. Canada's trade with ninety-eight different countries is dealt with.

Throughout the report, figures for the fiscal year ended March 31, 1936-37, are unrevised; those for earlier years are final.

The report was prepared in the External Trade Branch of the Dominion Bureau of Statistics under the direction of Mr. A. L. Neal, B.A., B.Sc. (econ.), Acting Chief.

R. H. COATS,  
Dominion Statistician

DOMINION BUREAU OF STATISTICS,  
OTTAWA, June 22, 1937.

## REVIEW OF CANADA'S FOREIGN TRADE, 1936-37

For the fourth consecutive fiscal year Canada's foreign trade in 1936-37 achieved a substantial expansion over the preceding fiscal period and maintained a rate of recovery exceeding that of world international trade generally. In each month both imports and domestic exports were greater in value than in the corresponding month of the year before. For the full twelve months ended March 31, 1937, imports reached a value of \$671,876,000 and exports \$1,074,244,000, being increases over 1935-36 of 19.4 per cent and 25.0 per cent respectively. Compared with the depression low reached in 1932-33 the value of trade in 1936-37 represented a gain of 65.3 per cent for imports and 101.0 per cent for exports.

Imports and exports in 1936-37 gained in quantity as well as value, the former gaining by 15.8 per cent over 1935-36 in quantity and the latter by 17.5 per cent. While the trade of Canada in value is still below the levels attained before the world economic crisis, examination of leading imports and exports reveals that on a quantity basis recovery has proceeded a great deal further.

The increase in Canada's trade had a wide geographical distribution. Imports from all continents but Africa, which supplied less than 8 per cent of the total, increased in 1936-37 over 1935-36. Exports to all continents increased in the same period. The United States remained Canada's most valuable external market and most important source of supply, the United Kingdom being second with a long lead over the next nearest competitor.

### CANADA'S IMPORTS, EXPORTS AND TOTAL TRADE, 1913-14 TO 1936-37

Fiscal Years	Total Imports	Total Exports			Total Trade	Excess: Imports (-) Exports (+)

1936-37.....	671,875,566	1,031,181,909	13,082,314	1,044,258,220	1,746,119,786	(+) 402,368,654

NOTE.—It is pointed out with reference to the statistics in the above table, and particularly regarding Canada's imports in 1935-36 and 1936-37 throughout this report, that the excise duty, which has been included in the value of distilled spirits, chiefly whiskey, imported into Canada from countries entitled to the British Preferential Tariff since the fiscal year 1920-21, is excluded as from April 1, 1935. Imports in 1935-36 and 1936-37, particularly from United Kingdom, are consequently lower than would otherwise be the case.

It will be noted from the statistics in the table above that Canada has expanded sales abroad to a greater extent than purchases from other countries. In consequence, the balance of trade, which has been substantially in Canada's favour in recent years, became even more favourable in 1936-37, amounting to \$402,369,000. This large favourable balance of trade has been surpassed in only two fiscal years since Confederation, viz: 1917-18 when abnormal war conditions prevailed and in 1924-25.

Coincident with the expansion of import trade the amount of duty collected increased from \$82,784,000 in 1935-36 to \$92,145,000 in 1936-37. Notwithstanding this increase in duty collected the average ad valorem rate (i.e. the amount of duty expressed as a percentage of the value of imports) declined from 14.7 per cent on all imports in 1935-36 to 13.7 per cent in 1936-37. On dutiable imports alone, the rate was 26.7 per cent in 1935-36 and 24.9 per cent in 1936-37. The proportion of imports which were free of duty was substantially the same in both years.

## COMPARISON OF VALUE AND VOLUME OF CANADA'S TRADE 1935-36 AND 1936-37

It is important to bear in mind when comparing trade over different periods that changes in value are not necessarily a measure of changes in the quantity or volume of merchandise involved. Changes in the values of imports and exports over a period may be caused either by variations in quantity, by fluctuations in prices or by a combination of those factors. A preliminary compilation has been made comparing the value and volume of Canada's trade for the fiscal year 1936-37 with that of 1935-36. The results are set forth in the table below. The declared values by main groups are shown for both years, together with the values obtained by re-valuing the quantities of 1936-37 at the average unit prices prevailing in 1935-36. By this means the element of price fluctuation is eliminated and a comparison of the volume of trade in the two years is obtained.

In imports the volume of "Animals and Animal Products" declined slightly notwithstanding an increase of 14.6 per cent in value. All other main groups increased in both value and volume of imports. The total value of imports increased from \$562,719,000 in 1935-36 to \$671,876,000 in 1936-37, an increase of 19.4 per cent. If the prices of import commodities had not risen, the value would have increased, nevertheless, to \$651,890,000 indicating an expansion in volume of 15.8 per cent.

Exports also increased in both value and volume, gaining by 25.0 per cent in the former and 17.5 per cent in the latter. All main groups shared in the general expansion except "Iron and Its Products" which registered a slight decline in volume and only a small increase in value.

## COMPARISON OF VALUE AND VOLUME OF CANADA'S TRADE

(Fiscal Year 1936-37 compared with 1935-36)

## PRINCIPAL IMPORTS INTO CANADA, 1936-37

In 1936-37 imports under the main group of Agricultural and Vegetable Products amounted to \$131,400,000 compared with \$110,343,000 in 1935-36, an increase of 19.1 per cent. Principal items accounting for this increase were: Fresh, dried and canned fruits; nuts; vegetables; beans; corn; oats; sugar; cocoa and chocolate; coffee; tea; vegetable oils (non edible); raw rubber; flaxseed; brandy; gin; wines; gums and resins and spirits of turpentine. Items showing decreases were: Biscuits; rice; olive oil; molasses and syrups; hops; whiskey; raw tobacco and broom corn.

Important items showing increases in the group of Animals and Animal Products, which increased 14.6 per cent, or from \$24,314,000 in 1935-36 to \$27,863,000 in 1936-37, were: Horses; fish; furs; bone, ivory, and shell products; animal bristles; hides and skins; manufactures of leather; fish oils and edible gelatine. Imports of unmanufactured leather; lard and its compounds and sausage casings, declined.

Under the group of Fibres, Textiles and Textile Products, important increases were registered by raw cotton; raw wool; wool carpets; hemp, dressed or undressed; as well as cotton yarn and fabrics; cotton and linen handkerchiefs; flax, hemp and jute yarn; flax, linen and jute fabrics; wool piece goods; woollen yarns; blankets; sisal fibre; binder twine; commercial fishing lines; hats and caps; oilcloth; rags and waste and artificial silk fabrics; while decreases were shown by linen thread; raw silk and manila fibre. The whole group increased by 16.7 per cent over 1935-36.

Imports under Wood, Wood Products and Paper increased from \$23,272,000 in 1935-36 to \$28,928,000 in 1936-37, a gain of 24.3 per cent. The chief items were: Lumber; wood pulp; cork manufactures; paper and manufactures and books and printed matter.

Iron and Its Products was the largest main group of imports in value, and amounted to \$150,239,000 in 1936-37, compared with \$114,254,000 in 1935-36, being an increase of 31.5 per cent. The chief items showing increases were: Rolling-mill products; pipes and tubes; chains; Diesel engines; farm implements; stamped and coated products; tools; automobiles; automobile parts; railway car parts; stoves; machinery and hardware. Items showing decreases included iron ore and castings and forgings.

Imports of Non-Ferrous Metals and Products increased 10.0 per cent, or from \$33,685,000 in 1935-36 to \$37,038,000 in 1936-37. Under this group the following leading imports show increases: Aluminium (chiefly bauxite); brass; copper; nickel; tin in blocks; zinc; alloys; clocks and watches; electric apparatus; gas apparatus and manganese oxide; while imports of precious metals; ores, n.o.p. and printing materials, decreased.

Leading items under the Non-Metallic Mineral group, which gained 10.9 per cent in imports on 1936-37 over 1935-36, include asbestos; clay and products (largely tableware of china); coal; glass; crude petroleum; lubricating oils; stone and products; diamonds, unset and sulphur. Imports of gasoline; carbons, electric and salt, declined.

Principal items showing increases under the Chemical group, which gained 10.6 per cent in imports in 1936-37 over 1935-36, were: Acids, compounds of tetraethyl lead; drugs and medicines; dyeing and tanning materials; explosives; fertilizers; paints; soap; cellulose products and sodium compounds. Potassium compounds showed a decrease.

Imports under the Miscellaneous group increased 31.1 per cent over 1935-36 in 1936-37. Included among the items accounting for the increase were: Amusement and sporting goods; household and personal goods; mineral waters; musical instruments; scientific equipment; ships and vessels; vehicles, n.o.p.; works of art; express and post office parcels; precious stones and waste paper clippings. Decreases included containers; articles for exhibition and settlers' effects.

**Imports of One Hundred Leading Commodities:**—The Statement below shows imports into Canada of one hundred leading commodities, or groups of commodities. Further details of imports by commodities will be found in Table 8, on page 72 of this report. The items shown in the following statement constitute 81.4 per cent of total imports in 1936-37. Examination of the table reveals that eighty-four of the hundred items increased in value of imports, while of the fifty-one items for which quantity statistics are shown, thirty-nine increased in volume. Industrial machinery, with an increase in imports of over \$9,000,000, moved from fourth to third place, displacing automobile parts, imports of which increased by \$4,600,000. Farm implements and machinery and automobiles also scored notable increases in imports.

**Imports for Canadian Industry:**—Canada, like other manufacturing countries, is dependent on imports in large measure for its supply of numerous raw materials, such as petroleum oils, coal, raw cotton, rubber, raw silk, sisal fibre, iron ore, bauxite, sulphur, manganese oxide, etc. The extent of imports of commodities such as these is indicative of economic progress and industrial activity in Canada. The following table shows the imports into Canada of seventy commodities for Canadian industry. The list is not exhaustive but it represents, none the less, 38 per cent of total imports in 1936-37, or \$254,360,662. The increase over 1935-36 was \$32,489,880, being a gain of 15 per cent. The figures have been aggregated according to the amount of industrial processing the items have already undergone, 52 per cent, or \$131,162,030 being raw materials; 20 per cent, or \$52,270,658, being semi-manufactured; and 28 per cent, or \$70,927,974, being manufactured but subject to further processing in Canada.

In conjunction with the items in the table below which represent materials for industry, important imports which are of the nature of equipment for industry are also significant. Imports of machinery other than farm machinery increased by over \$9,000,000 to \$31,088,819; farm implements increased by \$4,600,000 to \$10,803,750; engines and boilers gained \$423,000 to reach a value of \$8,663,262; tools and hand implements increased \$511,000 to \$2,156,538. These imports of materials and equipment have probably been stimulated by lower tariff levels, but, in addition, they must undoubtedly reflect the demands of expanding Canadian industry, increased buying power and consumption.

## CANADA'S IMPORTS OF SEVENTY LEADING COMMODITIES FOR CANADIAN INDUSTRIES

(Fiscal Year ended March 31, 1936-37 compared with 1935-36)

## PRINCIPAL EXPORTS FROM CANADA, 1936-37

Agricultural and Vegetable Products, the largest main group of exports in point of value, increased from \$242,862,000 in 1935-36 to \$346,451,000 in 1936-37, an increase of 42.6 per cent. This increase was largely accounted for by important gains in exports of wheat; barley and rye; as well as increases in exports of vegetables; bran; shorts and middlings; cereal foods; wheat flour; maple sugar; alcoholic beverages; oilcake; rubber manufactures; clover and flaxseed; hay and raw tobacco. Under this group exports of fruits (largely apples); malt; oats and hops, declined in 1936-37 compared with 1935-36.

Export items showing increases under the group of Animals and Animal Products, which increased by 32.7 per cent from \$100,932,000 in 1935-36 to \$133,941,000 in 1936-37, included cattle; horses, poultry; swine; fresh fish; furs, undressed; hides and skins; unmanufactured leather; manufactures of leather; meats, principally bacon and hams (fresh beef declined); cheese; fish oils; lard and compounds and tankage. Among the items under this group for which exports were smaller in 1936-37 were dried and canned fish and processed milk.

Exports of Fibres and Textiles increased from \$10,274,000 in 1935-36 to \$12,830,000 in 1936-37, or by 24.9 per cent. Important items showing increases under this group were: Raw wool; cotton and woollen clothing; silk socks and stockings; artificial silk; binder twine; felt manufactures and rags. Exports of silk manufactures decreased.

Owing to greater exports of planks and boards; pulpwood; square timber; wood pulp; newsprint and books and printed matter, as well as other smaller items in the group, exports of Wood, Wood Products and Paper increased from \$181,832,000 to \$223,918,000, or 23.2 per cent, from 1935-36 to 1936-37. Moderate declines were registered by exports of pickets; shingles and paper board, n.o.p.

Exports of Iron and Its Products increased from \$52,368,000 in 1935-36 to \$53,173,000 in 1936-37. Pigs, ingots and billets; scrap iron; rolling mill products; hardware and cutlery and machinery were among the items accounting for the increase; while exports of automobiles and parts; engines and boilers and farm implements, declined.

Exports under the Non-Ferrous Metals group increased by 8.3 per cent, from \$212,547,000 in 1935-36 to \$230,152,000 in 1936-37. This increase would have been larger but for the fall in exports of non-monetary gold, which declined from 2,383,472 ounces, valued at \$83,414,854 in 1935-36, to 2,188,199 ounces, valued at \$76,667,269 in 1936-37. The decline in exports of this item is largely due to the fact that the Bank of Canada since February, 1936, has been holding gold under earmark for clients abroad.

Items under the Non-Ferrous Metals group showing increases included aluminium; brass; copper; lead; nickel; platinum; zinc and electric apparatus.

Increased exports of asbestos; clay products; glass and glassware; petroleum products; artificial abrasives and gypsum principally accounted for the increase, 36.7 per cent, under the Non-Metallic Mineral Products group in 1936-37 as compared with 1935-36. Decreases were shown in coal; coke and creosote oil.

Acids; drugs and medicines; cobalt oxide; fertilizers; paints and varnishes and sodium compounds were among the items under the Chemicals and Allied Products group showing increases; while soap declined.

Exports of Miscellaneous Commodities increased by 17.4 per cent in 1936-37 over 1935-36. The increase was fairly generally distributed by items including containers; electrical energy; settlers' effects and stationery, n.o.p.; films and musical instruments declined considerably.

The following table shows exports of eighty-six leading commodities from Canada in 1936-37 with increase or decrease, compared with 1935-36. The items shown account for over 94 per cent of total exports. Seventy of the eighty-six items increased in value of exports, and forty-two of the items for which quantities are recorded increased in volume.

## DISTRIBUTION OF CANADA'S TRADE BY CONTINENTS AND COUNTRIES

In 1936-37 Canada purchased more goods from every continent, except Africa, than in 1935-36. As a source of supply to Canada, North America was in first position by a wide margin. Imports from North America were predominantly from the United States, which supplied more than half the Dominion's total imports, and more than twice those obtained from Europe. As percentage of the total, imports from Europe declined in 1936-37 as compared with the previous year, while the proportion from North America increased. The relative share of North America in Canada's imports is still below that of 1931-32.

Canada sold more goods to Europe in 1936-37 than to any other continent. Total exports to Europe amounted to \$488,300,000, of which the United Kingdom absorbed \$408,000,000. North America, which constituted Canada's largest external market in the previous year, took second place in 1936-37 with exports of \$460,400,000, although the United States, to which exports amounted to \$435,000,000, again purchased more than any other individual country. The continents of Europe and North America, including the great consuming markets of the United Kingdom and the United States, accounted together for 89.4 per cent of Canada's exports in 1936-37, compared with 88.9 per cent in the previous year. The remaining 10 per cent was fairly evenly distributed among the other continents.

The following statement on imports from forty leading countries shows how predominant the two great English-speaking countries are as a source of supply of Canadian imports. The United States supplied approximately 59 per cent of the Dominion's imports in 1936-37, while the United Kingdom, although having only about one-third the United States share in Canada's imports, had, nevertheless, more than ten times as large a share as Argentina which ranks third. Argentina moved into third place as a source of supply from fifteenth place in 1935-36 as a result of a striking increase in imports of 213.1 per cent. The countries shown in the table account for about 99 per cent of total imports in each year. The wide geographical distribution of the increase in imports is indicated by the number of plus signs in the last three columns of the table. Imports from thirty-four of the forty countries increased in 1936-37 as compared with 1933-34; thirty-two increased as compared with 1934-35; and twenty-six increased as compared with 1935-36.

The following table shows "Canada's Domestic Exports to Forty Leading Countries". The countries shown account for over 98 per cent of total domestic exports in each year. The United States and United Kingdom rank first and second respectively as export markets, the United States being first in the last three fiscal years, while the United Kingdom was first in 1933-34. Statistics of Canadian exports, by countries, should be read with the qualification that all the goods shown as exported to some countries may not finally be consumed in those countries, while on the other hand other countries may ultimately buy and use more Canadian goods than the Canadian export statistics indicate. For example, exports to the United Kingdom are known to include large amounts of wheat and other grains shipped "on order". The final destination is not known at the time of exportation from Canada. Similarly, considerable quantities of Canadian exports are consigned to one or other of the great European free ports and thence transhipped to the country of consumption. Since the country of final destination in these cases is not known at the time when the goods leave Canada, even to the owners, exports to such countries as the United Kingdom, Belgium, Netherlands, etc., which carry on a large entrepôt trade, are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries such as Norway, Switzerland, Czechoslovakia, etc., which obtain Canadian goods indirectly, would be correspondingly higher than the Canadian export statistics indicate.

## DOMINION BUREAU OF STATISTICS

As with the corresponding table on imports, the wide geographical extent of the recovery in export trade is indicated by the predominance of plus signs in the last three columns of the table below. Exports to thirty-six of the forty countries increased in 1936-37 as compared with 1935-36. Compared with 1934-35, there were thirty-four increases, and with 1933-34, thirty-two increases.

## CANADA'S MERCHANDISE TRADE BALANCE, 1936-37

Canada has had a progressively increasing favourable merchandise balance of trade each year since 1931-32. In the fiscal year 1936-37 exports increased to a greater extent than Canada's purchases from abroad and the favourable balance of trade again increased, amounting to \$402,369,000. This large favourable balance of trade has only been exceeded in two fiscal years since Confederation, viz.: 1917-18, when abnormal war conditions prevailed, and in 1925-26.

The table which follows shows the trade balance with leading countries over a series of comparative years. It will be noted that the trade balance was favourable with every continent but South America. In Europe the only important countries with which Canada's trade resulted in a substantial unfavourable balance were Czechoslovakia, Germany and Switzerland. The merchandise trade balances with European countries do not exactly represent the real situation. A large quantity of grain, especially wheat, shown in Canadian export statistics as destined to the United Kingdom via the United States, is diverted to other destinations, chiefly European countries. As a result, the credit balance with the United Kingdom would be substantially reduced, and the exports to other European countries increased correspondingly.

## TRADE OF CANADA WITH THE UNITED KINGDOM, 1936-37

The trade of Canada with the United Kingdom declined relatively less during the depression and recovery began somewhat sooner than was the case with trade with most other areas. Both imports and exports in 1936-37 continued the upward movement of recent years. Table II on page 58 of this report gives a summary of Canada's trade with the United Kingdom over a long series of years. Imports in 1936-37 were valued at \$129,524,098, the highest figure in any fiscal year since 1930-31, while domestic exports, valued at \$407,996,698, were higher than for any year since 1928-29.

Imports of goods free of duty constituted a slightly larger proportion of the total in 1936-37 as compared with 1935-36, and a substantially larger proportion as compared with earlier years. Imports of free goods from the United Kingdom in 1936-37 constituted 53.4 per cent of the total; in 1935-36, 52.5 per cent; in 1934-35, 47.3 per cent; in 1933-34, 45.7 per cent; and in 1932-33 only 35.5 per cent. Duty collected on imports from the United Kingdom increased in amount to \$15,574,132 from \$14,966,000 in the previous year. Largely owing to the increase in free imports relative to dutiable imports, the average ad valorem rate of duty (i.e. the amount of duty expressed as a percentage of the value of imports) declined to 12 per cent. This is lower than for any year in the present century and compares with a high of 21.9 per cent in 1931-32 and with 12.7 per cent in the previous year. The lower rate in 1936-37 as compared with 1935-36 is due not entirely to the higher proportion of free imports, which rose but from 52.5 per cent to 53.4 per cent, since the average rate of duty on dutiable imports, alone, dropped from 26.7 per cent in 1935-36 to 25.8 per cent in 1936-37.

Exports to United Kingdom have been increasing more rapidly than imports from that source, resulting in larger merchandise balance of trade in favour of Canada, which amounted to \$279,496,563 in 1936-37, compared with \$204,559,674 in 1935-36. Canadian statistics of exports to United Kingdom, however, give an exaggerated picture of that part of the Empire as a consumer of Canadian goods. This matter is discussed in the following section on the discrepancies between Canadian and United Kingdom statistics.

**Discrepancy between Canada-United Kingdom Trade Statistics:**—Imports into Canada from the United Kingdom should agree fairly well with the corresponding export figures from the United Kingdom to Canada, since the value of merchandise imported into Canada from the United Kingdom is the fair market value or price thereof at the time when the same is exported directly to Canada, while the value of merchandise exported from the United Kingdom to Canada is the f.o.b. value. There is, in fact, a considerable discrepancy between the two sets of figures (the Canadian figures being greater) chiefly in the trade in distilled spirits. The Canadian value of distilled spirits imported from the United Kingdom is in excess of the United Kingdom export value to Canada, due to the fact that since April 1, 1920 to March 31, 1935, the Canadian value not only included the United Kingdom declared export value, but the British excise tax as well. Since April 1, 1935, the discrepancy is not so marked. From 1921 to 1935 (calendar years) the Canadian imports of distilled spirits from the United Kingdom and the exports from the United Kingdom to Canada, year by year, vary somewhat in the quantity and materially in the value. The variation in the quantity is probably due to the fact that the distilled spirits may not be taken out of the Customs warehouse by the importer for some time subsequent to importation. From 1920 to 1936 Canada's imports of distilled spirits from the United Kingdom amounted to 19,304,903 proof gallons, valued at \$351,854,427, while the United Kingdom exports to Canada totalled 19,282,537 proof gallons, valued at \$120,053,246, a slight discrepancy in the quantity but a very considerable discrepancy in the value over a period of years. For the year 1920 the total imports into Canada from the United Kingdom, as well as the imports of distilled spirits, agree fairly well with the total exports and exports of distilled spirits from the United Kingdom to Canada. The statistics in the following table illustrate this feature.

**UNITED KINGDOM'S TOTAL EXPORTS AND EXPORTS OF DISTILLED SPIRITS TO CANADA CONTRASTED WITH CANADA'S TOTAL IMPORTS AND IMPORTS OF DISTILLED SPIRITS FROM THE UNITED KINGDOM**  
(Calendar Years, 1920 to 1936)

(a) Domestic exports only.

NOTE.—Value of Exports from the United Kingdom to Canada converted into Canadian currency at par of exchange (\$4=8666).

There is a greater discrepancy between Canada's statistics of exports to the United Kingdom and the United Kingdom's statistics of imports from Canada. The discrepancy prior to 1931 was due largely to the diversion of grain, especially wheat, shipped via the United States from the original destination—the United Kingdom—to other destinations. For the years 1931 and 1932, the discrepancies were not so pronounced, because a much smaller quantity of wheat was shipped to the United Kingdom via the United States in these years. In 1933, 1934 and 1935, the discrepancies were due partly to diversion of wheat, as in former years, and to a change in policy in recording gold, whereby exports of non-monetary gold bullion are included under "Merchandise", and not as formerly under "Coin and Bullion". This non-monetary gold is recorded in United Kingdom import statistics under "Coin and Bullion", and not under "Merchandise".

**EXPORTS FROM CANADA TO THE UNITED KINGDOM CONTRASTED WITH UNITED KINGDOM IMPORTS FROM CANADA**

	Years ended December 31—					
	1931	1932	1933	1934	1935	1936
	\$	\$	\$	\$	\$	\$
Exports from Canada to United Kingdom....	172,597,542	179,094,627	258,834,168	298,132,352	307,714,364	400,749,376
Imports into United Kingdom from Canada...	153,976,090	170,973,643	210,849,402	251,478,006	275,929,635	373,342,773

Canada's declared exports to the United Kingdom do not represent the actual amount of Canadian products received by the United Kingdom from Canada, the British imports being much less than the Canadian exports. The discrepancy is due in large measure to diversion of Canadian grain, especially wheat, from its original destination—the United Kingdom—to other destinations, chiefly continental Europe. This diversion takes place principally in the movement of Canadian products to the United Kingdom via the United States. If an adjustment were made for this diversion the revised exports to the United Kingdom would be less, and those to continental Europe greater than the declared exports.

**Principal Imports into Canada from the United Kingdom, 1936-37:**—The increase in imports from the United Kingdom in 1936-37 as compared with 1935-36, was common to all main groups with the exception of Agricultural and Vegetable Products. Fibres and Textiles, as usual, was the largest single main group in Canada's imports from the United Kingdom and amounted to \$46,633,288 in 1936-37, as compared with \$40,594,719 in the preceding year, an increase of 14.9 per cent. Imports of Iron and Its Products constituted the second main group, being valued at about half the Textile group, or \$23,033,333 in 1936-37, an increase of 12.1 per

cent over the \$20,551,388 recorded in 1935-36. Imports under Agricultural and Vegetable Products declined from \$18,007,399 in 1935-36 to \$17,923,553 in 1936-37. Non-Metallic Minerals increased 1.3 per cent to \$13,102,638 from \$12,932,009 in the same period; while Chemicals and Allied Products gained 9.8 per cent to \$6,957,434 from \$6,336,345; and Animals and Animal Products increased to \$5,070,766 from \$3,792,424 or 33.7 per cent; and Miscellaneous Commodities rose to \$6,962,416 from \$6,317,717, or 10.2 per cent.

Some of the principal items imported into Canada from United Kingdom in 1936-37 were as follows. Comparative figures for 1935-36 are given in parentheses: Plates and sheets, iron, \$11,170,070, (\$10,623,395); coal, \$6,754,277, (\$7,706,769); worsted tops, \$5,518,984, (\$4,585,797); worsted and serges, \$4,814,633, (\$3,942,599); flax, hemp and jute products, \$4,331,876, (\$4,066,803); oils, vegetable, \$4,328,395, (\$4,529,492); whiskey, \$3,431,055, (\$3,710,956); cotton piece goods, dyed or printed, \$3,360,355, (\$3,250,986); tea, \$2,998,675, (\$2,714,461); tableware of china, \$2,871,083, (\$2,538,470); woollen yarn, \$2,840,345, (\$2,587,173); machinery, \$2,776,280, (\$2,476,531); cotton yarn, \$2,458,341, (\$2,324,179); books and printed matter, \$2,254,729, (\$2,155,244); wool, raw, \$1,990,866, (\$1,624,398); rum, \$1,968,724, (\$2,199,837); artificial silk products, \$1,770,466, (\$892,689); furs, chiefly raw, \$1,631,091, (\$845,699); paints and varnishes \$1,555,349, (\$1,346,596); glass and glass ware, \$1,429,446, (\$925,033); leather, unmanufactured, \$1,357,812, (\$1,341,983); wire, iron, \$1,308,138, (\$1,057,495); electric apparatus, \$1,295,755, (\$1,022,964).

Further details respecting principal imports from United Kingdom will be found in Table 10 on page 79 of this report.

**Principal Domestic Exports from Canada to United Kingdom, 1936-37:**—The increase in Canada's domestic exports to the United Kingdom in 1936-37 as compared with 1935-36, was common to all main groups. Agricultural and Vegetable Products was the largest single main group, accounting for nearly half the total domestic exports in both years, and amounted to \$197,083,567 in 1936-37, compared with \$154,261,975 in 1935-36, an increase of 27.8 per cent. Non-Ferrous Metals and Their Products took second place in value of exports to the United Kingdom, amounting to \$75,819,787 in 1936-37, compared with \$61,821,441 in 1935-36, an increase of 22.6 per cent. Exports of Animals and Animal Products, the third largest group, amounted to \$73,350,911 in 1936-37, as compared with \$54,592,114 in 1935-36, an increase of 34.4 per cent. Wood, Wood Products and Paper had exports valued at \$36,064,065 in 1936-37, as compared with \$28,772,934 in 1935-36, an increase of 25.3 per cent. Exports of Iron and Its Products were valued at \$13,032,283 in 1936-37, compared with \$11,159,695 in 1935-36, an increase of 16.8 per cent. Exports of Chemicals and Allied Products amounted to \$4,191,193 in 1936-37, compared with \$3,212,081 in 1935-36, an increase of 30.5 per cent. Exports of Fibres, Textiles and Textile Products increased from \$2,330,793 in 1935-36 to \$2,508,340 in 1936-37; Non-Metallic Minerals increased from \$2,207,869 in 1935-36 to \$2,730,516 in 1936-37; and Miscellaneous Commodities increased from \$3,197,996 in 1935-36 to \$3,216,036 in 1936-37; being increases of 7.6 per cent, 23.7 per cent; and 0.6 per cent, respectively.

Some of the principal exports from Canada to the United Kingdom in 1936-37 were as follows:—Comparative figures for 1935-36 are given in parentheses:—Wheat, \$153,247,606, (\$111,656,432); bacon and hams, \$27,839,974, (\$19,030,333); copper and products, \$25,587,108, (\$16,381,403); planks and boards, \$20,768,318, (\$13,926,422); nickel and products, \$13,244,478, (\$16,367,262); wheat flour, \$10,661,520, (\$9,577,241); furs, undressed, \$10,159,382, (\$9,259,525); cheese, \$9,334,456, (\$6,001,637); aluminium products, \$8,289,268, (\$6,012,387); platinum concentrates, \$8,052,314, (\$5,174,200); lead and products, \$8,024,985, (\$5,234,346); paper, \$7,027,436, (\$6,997,774); zinc and products, \$6,766,597, (\$6,724,160); fish, \$5,364,510, (\$6,424,191); leather, unmanufactured, \$5,343,490, (\$3,426,423); apples, fresh, \$4,662,634, (\$8,456,959); rubber and manufactures, \$4,625,107, (\$3,436,653); lard and compounds, \$3,841,468, (\$2,338,263); cereal foods, \$3,788,426, (\$3,388,607); machinery, except farm, \$3,713,677, (\$2,560,694); footwear of rubber, \$3,490,742, (\$2,513,000); cattle, \$2,767,267, (\$190,240); tobacco leaf, \$2,653,121, (\$2,531,612); oats, \$2,508,878, (\$3,491,878); pigs, ingots and blooms, iron, \$2,222,118, (\$1,353,852); bars and rods, iron, \$1,246,176, (\$1,314,274); acids, \$1,088,035, (\$710,500); farm implements and machinery, \$1,086,548, (\$774,526); abrasives, artificial, crude, \$1,038,343, (\$752,513).

Further details respecting principal exports to United Kingdom will be found in Table 11, on page 82 of this report.

## TRADE OF CANADA WITH THE UNITED STATES, 1936-37

The United States is Canada's most valuable external market and most important source of supply. In recent years it has absorbed more than forty per cent of the Dominion's export and has supplied nearly sixty per cent of all imports into Canada.

Imports into Canada from the United States in 1936-37 were valued at \$394,419,012, compared with \$319,479,594 in the preceding year and a depression low of \$232,548,055 in 1932-33. In 1936-37 forty per cent of Canada's imports from United States were free of duty. Duty collected on imports increased from \$49,902,003 in 1935-36 to \$56,323,541 in 1936-37. Notwithstanding this increase in revenue, the average rate of duty on dutiable imports (i.e. the amount of duty as percentage of the value of imports) declined from 26.3 per cent in 1935-36 to 23.8 per cent in 1936-37.

Domestic exports from Canada to the United States were valued at \$435,014,544 in 1936-37, compared with \$360,302,426 in the preceding year and with a depression low of \$197,424,723 in 1932-33.

The balance of trade with the United States was somewhat less favourable in 1936-37 than in 1935-36, dropping from \$52,648,180 to \$51,670,305. In this connection, however, it should be borne in mind that actual exports of non-monetary gold have been, in a measure, replaced by increased holdings of gold under earmark by the Bank of Canada. (See statement, page 38).

## CANADA'S TRADE WITH THE UNITED STATES, BY MONTHS, APRIL-MARCH, 1933-34, 1934-35, 1935-36 AND 1936-37

**Discrepancy Between Canada-United States Trade Statistics:**—In considering the discrepancy between Canada's statistics of trade with the United States, and the United States statistics of trade with Canada, many factors must be noted. In the United States, Alaska, Hawaii, and Puerto Rico are considered as United States territory for trade and other purposes, while in Canada they are considered as separate entities. In the United States, raw gold, gold

bullion, non-monetary, silver ore and silver bullion are not included in the general trade figures, whereas in Canada these non-ferrous metals are included. When these adjustments are made in the exports from Canada to the United States there is still a discrepancy in the movement of products from Canada to the United States, as recorded in the trade figures of the two countries amounting to less than 2 per cent in 1928 and 1929; about 3.7 per cent in 1930; 6 per cent in 1931, 1932, 1933; 2 per cent in 1934; about 7.4 per cent in 1935; and about 9.9 per cent in 1936, as indicated in the following table:—

## MOVEMENT OF GOODS FROM CANADA TO THE UNITED STATES

(Calendar Years, 1928 to 1936)

Calendar Years	Imports into United States from Canada	Exports from Canada to United States (c)	Discrepancy: Excess Imports (b) Exports (a)

(c) Canadian figures adjusted by adding to the exports to United States, exports to Alaska, Hawaii and Puerto Rico, and deducting exports of raw gold, gold bullion, non-monetary, silver ore and silver bullion.

With reference to the above discrepancy, it is significant (1) that in the years 1928 to 1930 Canada exported large quantities of alcoholic beverages to the United States, while the United States in these years recorded no imports of alcoholic beverages from Canada; and (2) that from 1928 to 1935 the United States wheat imports from Canada were much in excess of Canada's wheat exports to the United States, due to the fact that large quantities of wheat shipped to overseas countries via the United States were diverted to the United States, this diverted wheat being credited to Canada in United States trade statistics, though Canada had no export record of such diversions. If these differences, 1930 to 1935, are taken into account, it will be found that the discrepancy in the foregoing table in favour of the United States in 1930 would be reduced by about \$4,000,000; in 1931 by \$7,000,000; in 1932 by about \$5,000,000; in 1933 by about \$5,700,000; in 1934 by about \$3,800,000; and in 1935 by about \$13,800,000.

There is a considerable discrepancy between the Canadian imports from the United States and United States exports to Canada, even when adjustments are made in Canada's imports. This is largely due to United States recording in their exports to Canada, especially grains, mainly wheat, which are only intransit via Canada to overseas countries. The United States Department of Commerce is aware that a large percentage of the exports shown as shipped to Canada are really only intransit to overseas countries via Canada. On pages 31 and 32 of Trade Information Bulletin No. 602 re "Foreign Trade of the United States, 1928", the Bulletin states that "The figures of trade by continents, as originally published, are somewhat misleading in the case of exports to North America and to Europe. This is due to the fact that especially during recent years large quantities of grain have been shipped through Canada to foreign countries, almost exclusively to Europe, which, because the exporter at the time of shipment does not know the final destination, are credited to Canada". Such shipments do not appear in the import or export trade of Canada, being considered as intransit trade. The amount of these grain shipments to Canada has varied in recent years, in 1928 amounting to \$82,800,000 and in 1936 to \$1,449,346. It will appear from the statistics in the following table that when these grain shipments are eliminated from the United States exports to Canada, the revised United States exports to Canada and Canada's adjusted imports from the United States agree fairly well, except for the years 1932 and 1935. In fact, the discrepancy between the two sets of figures is less than 4 per cent, except for the years 1932 and 1935.

## MOVEMENT OF GOODS FROM THE UNITED STATES TO CANADA

(Calendar Years, 1928 to 1936)

Calendar Years	Total Unrevised Exports from United States to Canada	Less United States Exports of Grains to Canada	Total Revised Exports from United States to Canada	Canada's Adjusted Imports from United States (c)	Excess Canadian Imports (a) U.S. Exports (b)
	\$	\$	\$	\$	\$

(c) Canadian figures adjusted by adding to the imports from United States, imports from Alaska, Hawaii and Puerto Rico and deducting imports of gold, unmanufactured, for commercial purposes, and silver bullion.

**Principal Imports into Canada from the United States, 1936-37:**—All main groups shared the increase in Canada's imports from the United States in 1936-37 as compared with 1935-36. Iron and Its Products, the largest main group, increased from \$88,428,437 to \$121,742,147, an increase of 37.7 per cent. Non-Metallic Minerals and Their Products, the next group in importance, increased by 12.1 per cent, from \$78,088,621 in 1935-36 to \$87,523,572. Agricultural and Vegetable Products increased from \$30,959,760 to \$38,267,822, a gain of 23.6 per cent. Fibres, Textiles and Textile Products gained 15.8 per cent, increasing from \$32,094,435 to \$37,176,542. Non-Ferrous Metals and Their Products increased from \$23,305,389 to \$25,384,213, or 8.9 per cent. Wood, Wood Products and Paper increased from \$17,863,399 to \$23,060,903, a gain of 29.1 per cent. Animals and Animal Products gained 15.4 per cent, being valued at \$12,659,575 in 1936-37, compared with \$10,973,245 in the previous year. Chemicals and Allied Products gained 10 per cent over the previous year, increasing in value of imports from \$17,500,123 to \$19,388,229. Miscellaneous Commodities showed a larger relative gain in 1936-37 over 1935-36 than any other main group, increasing by 44.2 per cent, imports being valued at \$29,216,009 in 1936-37 and \$20,266,185 in 1935-36.

Some of the principal items imported into Canada from the United States in 1936-37 were as follows. Comparative figures for 1935-36 are given in parentheses:—Crude petroleum, \$31,401,179, (\$27,408,732); machinery, except farm, \$27,403,682, (\$18,562,224); automobile parts, \$27,180,371, (\$22,580,553); coal, \$26,355,389, (\$25,044,086); raw cotton, \$19,257,365, (\$16,402,279); rolling mill products, \$17,597,625, (\$11,851,580); fruits, \$15,539,422, (\$12,565,713); electric apparatus, \$10,345,049, (\$7,597,602); farm implements and machinery, \$10,141,308, (\$5,712,752); automobiles, \$9,636,151, (\$2,943,156); books and printed matter, \$9,604,884, (\$7,284,803); engines and boilers, \$7,502,600, (\$7,272,560); refined petroleum, \$6,863,396, (\$6,071,228); silk and products, \$5,395,986, (\$6,123,129); stone and its products, \$4,996,627, (\$3,653,782); paper, \$4,955,607, (\$4,015,053); furs, chiefly raw, \$4,706,597, (\$3,674,730); vegetables, all kinds, \$4,439,492, (\$3,302,454); rubber and its products, \$4,181,685, (\$3,397,346); lumber and timber, \$3,964,469, (\$2,865,014); glass and glassware, \$3,747,325, (\$3,318,732); clay and products, \$3,400,560, (\$2,711,582); oils, vegetable, \$3,208,603, (\$2,562,430); aluminium and products, \$2,944,919, (\$2,646,866); paints and varnishes, \$2,522,492, (\$1,987,443); brass and products, \$2,391,690, (\$1,891,077); dyeing and tanning materials, \$2,254,144, (\$2,289,751); leather and manufactures, \$2,203,656, (\$2,296,124); hides, raw, \$2,105,281, (\$1,541,221); gums and resins, \$1,726,489, (\$1,339,981); iron ore, \$1,584,701, (\$1,572,932); manila, sisal, istle, etc., \$1,257,949, (\$804,011).

Further details respecting principal imports from the United States will be found in Table 12 on page 85 of this report.

**Principal Exports from Canada to United States, 1936-37:**—The increase in exports from Canada to the United States in 1936-37, as compared with 1935-36, was common to all main groups with the exception of Non-Ferrous Metals and Their Products. The decline of 3·7 per cent in this group is largely owing to the fact that the actual exports of gold bullion have been replaced by holdings of gold under earmark by the Bank of Canada during the year. Wood, Wood Products and Paper, the largest main group in Canada's exports to the United States, increased from \$125,247,878 to \$153,717,675, a gain of 22·7 per cent. Agricultural and Vegetable Products increased from \$44,663,210 to \$76,203,221, a gain of 64·8 per cent. Animals and Animal Products increased from \$34,058,519 to \$46,431,986, a gain of 36·3 per cent. Non-Metallic Minerals gained 47·7 per cent, increasing from \$11,566,497 in 1935-36 to \$17,080,392. Chemicals and Allied Products showed an improvement in exports of 16·6 per cent, being valued at \$8,699,580 in 1936-37 as compared with \$7,458,104 in 1935-36. The other principal groups of exports, namely: Fibres, Textiles and Textile Products; Iron and Its Products and Miscellaneous Commodities gained 15 per cent; 12·2 per cent and 21 per cent, respectively.

Some of the leading exports from Canada to the United States in 1936-37 were as follows. Comparative figures for 1935-36 are given in parentheses:—Newsprint paper, \$89,166,874, (\$72,956,142); wood pulp, \$28,602,029, (\$23,140,252); wheat, \$21,698,808, (\$16,660,253); whiskey \$21,450,569, (\$15,918,595); nickel, fine, \$21,067,972, (\$15,433,539); planks and boards, \$14,165,558, (\$9,448,877); barley, \$11,826,336, (\$1,221,567); cattle, \$11,010,036, (\$7,019,224); pulpwood, \$8,544,006, (\$6,901,315); furs, undressed, \$7,363,645, (\$5,623,071); asbestos, \$7,101,580, (\$4,911,947); shingles, \$6,432,913, (\$7,609,429); bran and shorts, \$4,591,824, (\$2,398,136); abrasives, artificial, crude, \$4,410,575, (\$3,295,236); lobsters, fresh, \$2,129,553, (\$1,815,551); horses, \$1,899,446, (\$1,216,246); cheese, \$1,493,372, (\$425,724); potatoes, \$1,362,490, (\$303,476); laths, \$1,043,498, (\$727,597).

Further details respecting principal exports from Canada to the United States will be found in Table 13 on page 88 of this report.

**Exports to United States in Relation to United States Tariffs:**—Under the Underwood Tariff, which was in force in the United States from October 3, 1913 to May 27, 1921, Canada increased domestic exports to the United States from \$139,725,000 to \$542,323,000 from 1912-13 to 1920-21 while the exports of farm products in 1920-21 totalled \$190,790,000. Under this Tariff 88·4 per cent of Canada's exports to the United States in 1920 was admitted duty free. Under the Emergency Tariff, which was in force from May 27, 1921 to September 21, 1922, and the Fordney-McCumber Tariff, from September 21, 1922 to June 18, 1930, Canada's exports of farm products (chiefly raw materials) from 1920-21 to 1929-30, decreased from \$190,790,000 to \$92,134,000, while under the Hawley-Smoot Tariff, which came into force on June 18, 1930, Canada's exports of farm products to the United States show a further decline, the exports amounting to \$6,048,000 in 1932-33. In 1933-34 they had increased to \$28,655,000, in 1934-35 to \$49,294,000, and in 1935-36 to \$61,897,000 being \$30,237,000 less than in 1929-30. A heavy duty was imposed on fish under the Fordney-McCumber and Hawley-Smoot Tariffs, which seriously affected the market in the United States for Canadian fish, while in June, 1932, the United States placed a heavy duty on softwood lumber and copper, which also seriously affected Canada's exports of lumber and copper to the United States.

The statistics in the following table showing Canada's exports of certain farm, fish, copper and lumber products to the United States, years 1920-21 to 1936-37, reflect the extent to which the exports of these products were affected by changes in the United States Tariff Acts of 1921, 1922, 1930 and 1932. The Canada-United States Trade Agreement became effective on January 1, 1936.

CANADA'S EXPORTS OF CERTAIN FARM, FISH, LUMBER AND COPPER PRODUCTS TO  
THE UNITED STATES, 1920-21 TO 1936-37, AFFECTED BY UNITED STATES

The Canada-United States Trade Agreement, which became effective on January 1, 1936, opened to the Dominion wider markets in all main divisions in Canada's production. Concessions were secured in respect to 88 items. Of these, 63 represented reductions in previously existing duties, 4, a guarantee of existing rates against increase and 21, assurance of continued free entry.

In agricultural products concessions were obtained on cattle, cream, seed potatoes, clover and grass seeds, hay, turnips and maple sugar. Substantial reductions were secured on fresh or frozen halibut, salmon and certain fresh lake fish, pickled or salted salmon and smoked herring. On lumber and timber a cut of 50 per cent was provided in Customs duties and excise taxes. In the mineral field, feldspar, talc, lime and various ferro-alloys were given reductions. Among manufactured products concessions were obtained for acetic acid, pulpboard in rolls for wall-board, whiskey, patent leather and harness and saddlery leather. The existing free entry was assured during the operation of the Agreement for a score of items of which newsprint, wood pulp, pulpwood, shingles and lobsters are specially notable.

The following table shows Canada's exports to United States according to the various types of concession gained. The figures are for the calendar year 1936, the first full year's operation of the Agreement, with comparative figures for 1935.

## PROPORTIONS OF TRADE IN RAW AND MANUFACTURED PRODUCTS

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed; a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century, Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported, rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the rapid decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages of both imports and exports of manufactures on a value basis.

# CONDENSED PRELIMINARY TRADE REPORT

33

In Canada, grains (chiefly wheat) and in the United States, raw cotton, grains (principally wheat) and raw tobacco are the leading commodities which comprise the bulk of the exports of raw materials. It is of interest to note the results in Canada and the United States when certain staple raw materials of farm origin, which are reproducible annually, are eliminated, such as grains, fresh fruits and vegetables, seeds and raw tobacco, for both countries, and raw cotton for the United States. The results, for the years 1900 to 1937, are set forth in the following table:—

RAW MATERIALS EXPORTED FROM CANADA 1899-1900 TO 1936-37 AND THE UNITED STATES, 1899-1900 TO 1936

(Values in Millions of Dollars)

It will be observed from the statistics in the following table, showing "Canada's Imports and Exports by Leading Countries, according to Degree of Manufacture", fiscal year 1936-37, that Canada's imports from those countries with highly developed manufacturing industries consist of manufactured products, and her exports to those countries are made up largely of raw and semi-manufactured products; while on the other hand Canada's trade with countries whose industries are not so highly developed consist chiefly, in the case of imports, of raw and semi-manufactured products, and in the case of exports, of manufactured products.

### EXPORTS OF GOLD IN CANADIAN STATISTICS

In Canadian trade statistics gold exported as merchandise is included as such as a part of the total commodity exports. Gold exported is considered merchandise when the export does not reduce domestic monetary reserves. The present procedure was determined by the Bureau of Statistics in conference with the Bank of Canada and the Department of National Revenue and dates from April 1, 1936. Statistics for earlier years have been revised back to 1926. In former times there was a movement of gold from Canada in the form of "Gold bearing quartz, dust, nuggets and gold bullion obtained direct from mining operations". When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as "Gold bearing quartz, dust, etc.", began to be exported in the form of bullion and was recorded under Coin and Bullion as distinct from Merchandise. In order to maintain comparability with the statistics of previous years, and also since Canada is a large gold-producing country and exports of gold are as much a part of national production as any other item, it was considered expedient to make the change indicated.

Since February, 1936, the Bank of Canada has been holding gold under earmark for clients abroad. This fact directly influences exports. Holdings of gold under earmark from February, 1936 to March, 1937, are shown below:—

#### BANK OF CANADA HOLDINGS OF EARMARKED GOLD

## TRADE OF CANADA COMPARED WITH WORLD TRADE

World international trade continued a moderately upward progress in the calendar year 1936. Despite the absence of a marked or general disposition towards the relaxation of the policies of economic nationalism which have retarded trade in recent years, the continuance of internal recovery and exchange stability have made possible some slackening in Western Europe of the more rigid types of trade restriction. At the same time a number of Governments, including Canada and notably the United States of America, have pursued the objective of freer trade and lower tariffs which they are gradually realizing by means of trade agreements with countries sharing their outlook. Reduction in world stocks of primary commodities, and the consequent more normal readjustment of supply and demand, has resulted in increased trade. The successful localization of major political disturbances has also been a favourable factor.

Total above Countries.....	16,919,572	18,518,953	15,680,331	16,962,524	(+) 9.5	(+) 8.2

The statistics in the table above indicate the generality of the upward movement in world trade in 1936. Of the thirty-three countries, twenty-four show increases for both imports and exports, while only eight countries failed to increase imports and only five did not expand exports. Canada's imports increased by 15.9 per cent and exports by 23.0 per cent compared with 9.5 per cent and 8.2 per cent, respectively, for the total of the thirty-three countries. Canada was surpassed in percentage of increase of imports by only five countries, viz.: Chile, Finland, New Zealand, Russia and United States, and in percentage increase of exports by New Zealand only with an increase of 23.2 per cent, compared with Canada's 23.0 per cent.

**Canada's Position in World Trade:**—During the calendar year 1936, Canada advanced in relative position among the leading trading nations, occupying fifth place in value of total trade as compared with sixth place in 1935. In import trade Canada moved from ninth place in 1935 to eighth in 1936, and advanced in rank as an exporting country from fifth to fourth position, being surpassed by only the United States, United Kingdom, and Germany. The table below gives further details respecting the relative position of the leading commercial countries of the world.

## TRADE OF TWELVE LEADING COMMERCIAL COUNTRIES OF THE WORLD IN CANADIAN CURRENCY

(Calendar Year, 1936)

Note.—The figures in parentheses represent relative position in 1935.

**Production and Export By Countries of Canada's Principal Export Commodities:—**

The trade of Canada is, of course, partly the result of the necessity to procure abroad those commodities which are lacking in Canada or which domestic industry does not supply in sufficient quantity; but perhaps in even greater measure it derives from the Dominion's great wealth of natural resources and productive capacity, which can only be most profitably exploited through wide participation in external markets.

In the production of many important commodities Canada ranks high among the countries of the world. The Dominion is first in the production of asbestos, nickel and newsprint, supplying normally over half the world's asbestos, over eighty per cent of the world's nickel, and more newsprint than the rest of the world combined. In the production of copper and zinc Canada stood third in 1936. With respect to the latter, however, the comparison is based on metal output; on a mine output basis the comparison would be more favourable to Canada. In gold and lead production Canada was in fourth place in 1936, and fifth place in respect to output of automobiles. According to figures issued by the Automobile Manufacturers Association, New York in "Automobile Facts and Figures", the total world output of automobiles in 1936 comprised 5,816,022 units, of which the United States furnished 4,454,115 units; the United Kingdom 481,447 units; Germany 297,512 units; France 201,737 units; and Canada 162,167 units. In wheat production Canada was probably in sixth position, although statistics for Russia are not available at the time of publication.

In export trade the Dominion led the world during 1936 in exports of wheat, newsprint paper, nickel and asbestos, and in exports of wheat flour occupied second place, being exceeded by Australia. Canada ranked third with respect to exports of automobiles, and fourth in exports of rubber tires and wood pulp. Canada also ranks high in the world's exports of many other products, such as lumber and timber, fish, copper, barley, cheese, raw furs, whiskey, meats, farm implements, cattle, gold, silver, rye, oats, rubber, footwear, leather and hides.

**EXPORTS OF AUTOMOBILES FROM PRINCIPAL AUTOMOBILE-PRODUCING COUNTRIES OF THE WORLD**

## HISTORICAL SUMMARY OF CANADA'S TRADE BY DECADES

(Fiscal Years 1889-90 to 1929-30 and 1936-37)

The statements which follow show the long term trend of Canada's imports and exports by commodities and countries in the fiscal years 1890, 1900, 1910, 1920, 1930 and 1937. In the interpretation of trends it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889; 52.1 in 1899; 59.5 in 1909; 134.0 in 1919; 95.6 in 1929; and 74.6 in 1936. These calendar years approximate the fiscal years shown in the tables following. The fiscal year 1910 was influenced by the general development boom in Western Canada; 1920 was affected by the feverish activity which immediately followed the War; 1930 represented the end of the security inflation period and the beginning of the downturn; while in 1936-37 recovery from the depth of the depression was well established, although world trade in general remained sluggish compared with internal recovery in many countries.

During the period of 47 years covered by the statement below, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus, in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus and aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000, but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products and meats, have become relatively less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century many of the leading imports are now raw materials required by Canadian industries.

## DOMINION BUREAU OF STATISTICS

## CANADA'S LEADING IMPORTS

Over the period of 47 years covered by this statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. Of the five leading exports in 1935, four were unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1935 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, lead, aluminium and platinum. Furthermore, expansion in the gold-mining industry has kept pace with that of the aforementioned metals, and exports of Non-Ferrous Metals are now greater than Wood, Wood Products and Paper, and second only to Agricultural and Vegetable Products.

## SUMMARY OF CANADA'S IMPORTS BY PRINCIPAL COUNTRIES

(Fiscal Years 1889-90, 1899-1900, 1909-10, 1919-20, 1929-30, 1936-37)

## PREFACE

All features of previous issues of the Condensed Preliminary Trade Report are continued in the present number. It consists of two main sections—a Review of Canada's Foreign Trade during the fiscal year just closed (1937-38) and a series of statistical tables ("Condensed Statistical Record of Canadian Trade") partly summary and historical, but mainly a presentation of the main items of the trade of Canada with the more important countries of the world.

In the first section, the external trade of Canada is examined from several angles and the outstanding features of the year are set out in both text and tabular form. This section also contains an historical summary of Canada's import and export trade by decades for 1889-90 to 1929-30 and for the fiscal year 1937-38, distinguishing imports and exports for principal countries and commodities.

All tables have been revised and expanded to meet altered conditions of trade. Canada's trade with ninety-eight different countries is dealt with.

Throughout the report, figures for the fiscal year ended March 31, 1937-38, are unrevised; those for earlier years are final.

The report was prepared in the External Trade Branch of the Dominion Bureau of Statistics under the direction of Mr. A. L. Neal, B.A., B.Sc. (econ.), Chief.

R. H. COATS,

Dominion Statistician

DOMINION BUREAU OF STATISTICS,  
OTTAWA, July 2, 1938.

## REVIEW OF CANADA'S FOREIGN TRADE, 1937-38

Canada's external trade in the fiscal year ended March 31, 1938, again recorded an increase over the preceding fiscal period. Declines in imports in the last three months and in exports in the last half of 1937-38, as compared with 1936-37, were offset by gains earlier in the year. For the full twelve months ended March 31, 1938, imports reached a value of \$799,070,000 and exports \$1,084,821,000, being increases over 1936-37 of 19 per cent and 1 per cent, respectively. Compared with the depression low reached in 1932-33 imports in 1937-38 represented a gain of 97 per cent and exports 103 per cent.

Imports gained in quantity as well as volume. The quantity of exports in 1937-38 declined by 8.6 per cent as compared with the previous year, this decline being more than counterbalanced by a rise in export prices.

1937-38.....	799, 069, 918	1, 070, 228, 609	14, 592, 595	1, 084, 821, 204	1, 883, 891, 122	(+) 285, 751, 286

NOTE:—It is pointed out with reference to the statistics in the above table, and particularly regarding Canada's imports in 1935-36, 1936-37 and 1937-38 throughout this report, that the excise duty which has been included in the value of distilled spirits, chiefly whiskey, imported into Canada from countries entitled to the British Preferential Tariff since the fiscal year 1920-21, is excluded as from April 1, 1935. Imports in 1935-36, 1936-37 and 1937-38, particularly from United Kingdom, are consequently lower than would otherwise be the case.

It will be noted from the statistics in the above table that in spite of the sharp decline in exports during the last six months of 1937-38 as compared with 1936-37, the balance of trade, although reduced from the extraordinarily high figure recorded last year, remains favourable to the extent of \$285,751,000.

## DOMINION BUREAU OF STATISTICS

Coincident with the expansion of import trade, the amount of duty collected increased from \$92,282,000 in 1936-37 to \$103,574,000 in 1937-38. Notwithstanding this increase in duty collected, the average ad valorem rate (i.e. the amount of duty expressed as a percentage of the value of imports) declined from 13.7 per cent on all imports in 1936-37 to 13.0 per cent in 1937-38. On dutiable imports alone, the rate was 24.9 per cent in 1936-37 and 23.9 per cent in 1937-38. The proportion of imports which were free of duty was substantially the same in both years.

## COMPARISON OF VALUE AND VOLUME OF CANADA'S TRADE 1936-37 AND 1937-38

It is important to bear in mind when comparing trade over different periods that changes in value are not necessarily a measure of changes in the quantity or volume of merchandise involved. Changes in the values of imports and exports over a period may be caused either by variations in quantity, by fluctuations in prices or by a combination of those factors. A preliminary compilation has been made comparing the value and volume of Canada's trade for the fiscal year 1937-38 with that of 1936-37. The results are set forth in the table below. The declared values by main groups are shown for both years, together with the values obtained by re-valuing the quantities of 1937-38 at the average unit prices prevailing in 1936-37. By this means the element of price fluctuation is eliminated and a comparison of the volume of trade in the two years is obtained.

In imports all main groups increased in both volume and value. The total value of imports increased from \$671,876,000 in 1936-37 to \$799,070,000. If there had been no increase in prices of import commodities, the total value would have increased nevertheless to \$759,219,000, indicating an expansion in volume of 11.5 per cent.

In exports the first two groups, viz.: "Agricultural and Vegetable Products" and "Animals and Animal Products" suffered declines in volume. The former, owing principally to curtailed shipments of wheat, declined by 42.9 per cent in volume, although higher prices restricted the drop in value to 32.1 per cent. The latter declined by 3.1 per cent in volume but registered a gain of 1.6 per cent in value. Exports of other groups showed gains in both value and volume.

PRINCIPAL IMPORTS INTO CANADA, 1937-38

In 1937-38 imports under the main group of Agricultural and Vegetable Products amounted to \$146,335,000 compared with \$131,400,000 in 1936-37, an increase of 11.4 per cent. Principal items accounting for this increase were: Fresh fruits; vegetables; oats; peas; rice; wheat; sugar; coffee; whiskey; gums and resins; vegetable oils, inedible; plants and trees; rubber, crude; rubber tires; clover seed and flaxseed. Items showing decreases were: Dried and canned fruits; nuts; beans; corn; biscuits; molasses and syrups; brandy; rum and raw tobacco.

Important items showing increases in the group of Animals and Animal Products, which increased 9.1 per cent, or from \$27,863,000 in 1936-37 to \$30,400,000 in 1937-38, were: Animals for exhibition; cattle for improvement of stock; bone, ivory and shell products; bristles, animal; hides and skins; leather and manufactures; butter; grease for soap and leather; gelatine and isinglass; glue, powdered or sheet and sausage casings. Imports of horses, fish, furs, cheese and gelatine, edible, declined.

Under the group of Fibres, Textiles and Textile Products, increases were registered by cotton yarns and fabrics; jute fabrics; raw silk; raw wool; woollen yarn; wool carpets; overcoatings; worsteds and serges; wool socks and stockings; artificial silk yarns and fabrics; manila fibre and oilcloth; while decreases were shown by raw cotton; cotton lace; hemp, dressed or undressed; worsted tops; sisal, istle, etc. fibre; binder twine and rags and waste. The whole group increased by 3.9 per cent over 1936-37.

Imports under Wood, Wood Products and Paper increased from \$28,928,000 in 1936-37 to \$34,221,000 in 1937-38, a gain of 18.3 per cent. The chief items were: Logs; railroad ties; lumber; pulpwood; cork manufactures; paper and manufactures and books and printed matter.

Iron and Its Products was the largest main group of imports in value, and amounted to \$209,237,000 in 1937-38, compared with \$150,239,000 in 1936-37, being an increase of 39.3 per cent. The chief items showing increases were: Iron ore; pigs, ingots, blooms and billets; scrap iron; castings and forgings; rolling mill products; tubes, pipes and fittings; wire; chains; Diesel engines; traction engines, farm, and parts; machinery (except farm); automobiles and parts; railway cars and parts; and stoves (except electric). Items showing decreases included automobile engines and cutlery.

Imports of Non-ferrous Metals and Products increased 27.1 per cent, or from \$37,038,000 in 1936-37 to \$47,064,000 in 1937-38. Under this group the following leading imports show increases: Aluminium (chiefly bauxite); brass; copper; nickel; tin in blocks; zinc; alloys; clocks and watches; electric apparatus; gas apparatus; metallic articles for agricultural implements; manganese oxide; ores, n.o.p.; printing materials and equipment for vessels. Imports of precious metals decreased.

Leading items under the Non-Metallic Mineral group, which gained 16.9 per cent in imports in 1937-38 over 1936-37, include asbestos; clay and products (largely tableware of china); coal; glass; petroleum products; stone and products; carbons, electric; diamonds, unset; salt and sulphur. Imports of coke for fuel declined.

Principal items showing increases under the Chemical group, which gained 11.4 per cent in imports in 1937-38 over 1936-37, were: Acids; nitrate of ammonia; compounds of tetraethyl lead; drugs and medicines; explosives; fertilizers; glycerine; paints; perfume and sodium compounds. Cellulose products; dyeing and tanning materials; potassium compounds and soap showed a decrease.

Imports under the Miscellaneous group increased 18.7 per cent in 1937-38 over 1936-37. Included among the items accounting for the increase were: Amusement and sporting goods; brushes; household and personal goods; musical instruments; scientific equipment; ships and vessels; vehicles, n.o.p.; works of art; express and post office parcels; settlers' effects and waste paper clippings. Decreases included containers; mineral waters; articles for exhibition; articles re-imported; articles for ships' stores; electrical energy and incubators and brooders.

**Imports of One Hundred Leading Commodities.**—The statement below shows imports into Canada of one hundred leading commodities, or groups of commodities. Further details of imports by commodities will be found in Table 8, on page 70, of this report. The items shown in the following statement constitute 80.0 per cent of total imports in 1937-38. Examination of the table reveals that seventy-five of the hundred items increased in value of imports, while of the fifty-one items for which quantity statistics are shown, twenty-eight increased in volume. Industrial machinery, with an increase in imports of over \$17,000,000, moved from third to first place, displacing crude petroleum and coal, imports of which increased by \$7,000,000 and \$4,000,000, respectively. Farm implements and machinery, automobiles, and iron plates and sheets also scored notable increases in imports.

**Imports for Canadian Industry:**—Canada, like other manufacturing countries, is dependent on imports in large measure for its supply of numerous raw materials, such as petroleum oils, coal, raw cotton, rubber, raw silk, sisal fibre, iron ore, bauxite, sulphur, manganese oxide, etc. The extent of imports of commodities such as these is indicative of economic progress and industrial activity in Canada. The following table shows the imports into Canada of seventy commodities for Canadian industry. The list is not exhaustive but it represents, none the less, 36 per cent of total imports in 1937-38, or \$287,033,717. The increase over 1936-37 was \$32,744,744, being a gain of 14 per cent. The figures have been aggregated according to the amount of industrial processing the items have already undergone; 50 per cent, or \$143,805,770, being raw materials; 22 per cent, or \$61,649,402, being semi-manufactured and 28 per cent, or \$81,578,545, being manufactured but subject to further processing in Canada.

In conjunction with the items in the table below, which represent materials for industry, important imports which are of the nature of equipment for industry are also significant. Imports of machinery, other than farm machinery, increased by over \$17,000,000 to \$48,367,372; farm implements increased by \$8,400,000 to \$19,245,768; engines and boilers gained \$2,200,000 to reach a value of \$10,872,390; tools and hand implements increased \$469,000 to \$2,625,960. These imports of materials and equipment reflect the demands of expanding Canadian industry, increased buying power and consumption.

## CANADA'S IMPORTS OF SEVENTY LEADING COMMODITIES FOR CANADIAN INDUSTRIES

(Fiscal Year ended March 31, 1937-38 compared with 1936-37)

## PRINCIPAL EXPORTS FROM CANADA, 1937-38

Agricultural and Vegetable Products decreased from \$346,451,000 in 1936-37 to \$235,324,000 in 1937-38, a decrease of 32.1 per cent. This decrease was almost entirely accounted for by the drop in exports of grains, principally wheat, barley, oats and rye. Other commodities which showed decreases were: Vegetables; bran, shorts and middlings; screenings; sugar and products; alcoholic beverages; oilcake; oils, inedible; fodders, n.o.p. and hay. Under this group fruits; cereal foods; malt; oatmeal and rolled oats; wheat flour; rubber manufactures; seeds and raw tobacco, showed increases.

Export items showing increases under the group of Animals and Animal Products, which increased by 1.6 per cent from \$133,941,000 in 1936-37 to \$136,113,000 in 1937-38, included cattle for improvement of stock; poultry, n.o.p.; fish; hair; leather manufactures; meats (principally bacon and hams); cheese; processed milk; fish oil and eggs. Among the items under this group for which exports were smaller in 1937-38 were: Animals for exhibition; cattle, except for stock; horses, n.o.p.; swine, n.o.p.; furs; hides and skins; leather, unmanufactured; lard and compounds; tallow and tankage.

Exports of Fibres and Textiles increased from \$12,830,000 in 1936-37 to \$14,225,000 in 1937-38, or by 10.9 per cent. Important items showing increases under this group were: Flax, hemp and jute products; cotton and woollen clothing; silk socks and stockings; artificial silk; binder twine; felt manufactures and gloves and mitts. Exports of silk manufactures; raw wool and rags decreased.

Owing to greater exports of logs; pickets; poles; planks and boards; pulpwood; square timber; wood pulp; book, newsprint and wrapping paper, as well as other smaller items in the group, exports of Wood, Wood Products and Paper increased from \$223,918,000 to \$253,435,000, or 13.2 per cent, from 1936-37 to 1937-38. Moderate declines were registered by exports of laths; shingles and books and printed matter.

Exports of Iron and Its Products increased from \$53,173,000 in 1936-37 to \$69,744,000 in 1937-38. Pigs, ingots and billets; tubes and pipes; engines and boilers; farm implements; hardware and cutlery; machinery; tools and automobiles and parts were among the items accounting for the increase; while exports of scrap iron; rolling mill products and wire, declined.

Exports under the Non-Ferrous Metals group increased by 27.1 per cent, from \$230,152,000 in 1936-37 to \$292,453,000 in 1937-38. Items under this group showing increases included aluminium; brass; copper; lead; nickel; precious metal (except platinum concentrates); zinc and electric apparatus. Items which showed declines were platinum concentrates and cobalt ore.

Increased exports of asbestos; clay products; coke; creosote oil; artificial abrasives and gypsum principally accounted for the increase of 12.5 per cent, under the Non-Metallic Mineral Products group in 1937-38, as compared with 1936-37. Decreases were shown in coal; glass and glassware; petroleum products and sulphur.

Cellulose products; drugs and medicines; cobalt oxide; fertilizers; paints and varnishes; soap and sodium compounds were among the items under the Chemicals and Allied Products group showing increases, while acids declined.

Exports of Miscellaneous Commodities increased by 21.2 per cent in 1937-38 over 1936-37. Contributing to the increase were aeroplanes and parts; containers; electrical energy; films; refrigerators and parts; settlers' effects and ships.

The following table shows exports of eighty-six leading commodities from Canada in 1937-38 with increase or decrease, compared with 1936-37. The items shown account for over 93 per cent of total exports. Sixty-one of the eighty-six items increased in value of exports and twenty-nine of the items for which quantities are recorded increased in volume.

## DISTRIBUTION OF CANADA'S TRADE BY CONTINENTS AND COUNTRIES

In 1937-38 Canada purchased more goods from every continent, except South America, than in 1936-37. As a source of supply to Canada, North America was in the first position by a wide margin. Imports from North America were predominantly from the United States, which supplied over sixty per cent of the Dominion's total imports, and more than two and one-half times those obtained from Europe. As a percentage of the total, imports from Europe declined in 1937-38 as compared with the previous year, while the proportion from North America increased.

Canada sold more goods to Europe in 1937-38 than to any other continent. Total exports to Europe amounted to \$480,600,000 of which the United Kingdom absorbed \$409,400,000. North America took second place in 1937-38 with exports of \$453,400,000, although the United States, to which exports amounted to \$423,100,000, again purchased more than any other individual country. The continents of Europe and North America, including the great consuming markets of the United Kingdom and the United States, accounted together for 87·3 per cent of Canada's exports in 1937-38, compared with 89·4 per cent in the previous year. The remaining 13 per cent was distributed principally between Asia and Oceania, the former taking as much, and the latter more than South America and Africa combined.

The following statement on imports from forty leading countries shows how predominant the two great English-speaking countries are as a source of Canadian imports. The United States supplied 60 per cent of the Dominion's imports in 1937-38, while the United Kingdom, although having about one-third the United States' share in Canada's imports, had, nevertheless, almost ten times as large a share as British Straits Settlements which ranks third. The countries shown in the table account for about 99 per cent of total imports in each year. The wide geographical distribution of the increase in imports is indicated by the number of plus signs in the last three columns of the table. Imports from thirty-six of the forty countries increased in 1937-38 as compared with 1934-35; twenty-seven increased as compared with 1935-36; and twenty-four increased as compared with 1936-37.

The following table shows "Canada's Domestic Exports to Forty Leading Countries". The countries shown account for over 98 per cent of total domestic exports in each year. The United States and United Kingdom rank first and second respectively as export markets, the United States being first in the last four fiscal years, while the United Kingdom was first in 1933-34. Statistics of Canadian exports, by countries, should be read with the qualification that all the goods shown as exported to some countries may not finally be consumed in those countries, while on the other hand other countries may ultimately buy and use more Canadian goods than the Canadian export statistics indicate. For example, exports to the United Kingdom are known to include large amounts of wheat and other grains shipped "on order". The final destination is not known at the time of exportation from Canada. Similarly, considerable quantities of Canadian exports are consigned to one or other of the great European free ports and thence transhipped to the country of consumption. Since the country of final destination in these cases is not known at the time when the goods leave Canada, even to the owners, exports to such countries as the United Kingdom, Belgium, Netherlands, etc., which carry on a large entrepôt trade, are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries such as Norway, Switzerland, Czechoslovakia, etc., which obtain Canadian goods indirectly, would be correspondingly higher than the Canadian export statistics indicate.

## CANADA'S MERCHANDISE TRADE BALANCE, 1937-38

The restrictive effect of unfavourable crop conditions and the economic recession in the United States and elsewhere on Canada's exports became apparent in the last half of the fiscal year, 1937-38. In each month since October exports declined as compared with the same month in the previous year. Imports reacted more slowly and reflected less drastically the declining activity of world trade. In consequence the Dominion's visible trade balance, although remaining favourable for the seventh year in succession, was smaller than in the two previous fiscal years, amounting to \$285,751,000 as compared with \$299,753,000 and \$402,369,000 in 1935-36 and 1936-37 respectively.

In the fiscal year 1937-38 exports of foreign gold coin from Canada amounted to \$40,440,000 as compared with \$707,000 in the previous year. This gold is excluded from the merchandise total in export statistics, although it is equivalent to all intents and purposes to Canadian gold. The decline in exports and favourable trade balance mentioned above, and in the table below, relate to merchandise trade only, and are therefore exaggerated when cognizance is taken of the outward movement of foreign gold coin.

## TRADE OF CANADA WITH THE UNITED KINGDOM, 1937-38

Trade of Canada with the United Kingdom declined relatively less during the depression and recovery began somewhat sooner than was the case with trade with most other areas. Both imports and exports 1937-38 continued the upward movement of recent years. Table II on page 56 of this report gives a summary of Canada's trade with the United Kingdom over a long series of years. Imports in 1937-38 were valued at \$144,999,566, the highest figure in any fiscal year since 1930-31, while domestic exports, valued at \$409,411,682, were higher than for any year since 1928-29.

Imports of goods free of duty constituted a slightly larger proportion of the total in 1937-38 as compared with 1935-36 and 1936-37 and a substantially larger proportion as compared with earlier years. Imports of free goods from the United Kingdom in 1937-38 constituted 53.6 per cent of the total; in 1936-37, 53.4 per cent; in 1935-36, 52.5 per cent; in 1934-35, 47.3 per cent; and in 1933-34 only 45.7 per cent. Duty collected on imports from the United Kingdom increased in amount to \$16,080,989 from \$15,574,132 in the previous year. The average ad valorem rate of duty, (i.e., the amount of duty expressed as a percentage of the value of imports) declined to 11 per cent. This is lower than for any year in the present century and compares with a high of 21.9 per cent in 1931-32 and with 12.0 per cent in the previous year.

Exports to the United Kingdom failed to expand as rapidly as imports from that source in the fiscal year 1937-38, contrasted with a more rapid growth of exports in previous years. The favourable balance of trade which amounted to \$279,512,776 in 1936-37 declined to \$265,783,757 in 1937-38.

Canadian statistics of exports to United Kingdom, however, give an exaggerated picture of that part of the Empire as a consumer of Canadian goods. This matter is discussed in the following section on the discrepancies between Canadian and United Kingdom statistics.

**Discrepancy between Canada—United Kingdom Trade Statistics:**—Imports into Canada from the United Kingdom should agree fairly well with the corresponding export figures from the United Kingdom to Canada, since the value of merchandise imported into Canada from the United Kingdom is the fair market value or price thereof at the time when the same is exported directly to Canada, and the value of merchandise exported from the United Kingdom to Canada is the f.o.b. value. There is, in fact, a considerable discrepancy between the two sets of figures (the Canadian figures being greater) chiefly in the trade in distilled spirits. The Canadian value of distilled spirits imported from the United Kingdom is in excess of the United Kingdom export value to Canada, due to the fact that from April 1, 1920, to March 31, 1935, the Canadian value not only included the United Kingdom declared export value, but the British excise tax as well. Since April 1, 1935, the discrepancy is not so marked. From 1921 to 1935 (calendar years) Canadian imports of distilled spirits from the United Kingdom and the exports from the United Kingdom to Canada, year by year, vary somewhat in the quantity and materially in the value. The variation in the quantity is probably due to the fact that the distilled spirits may not be taken out of the Customs warehouse by the importer for some time subsequent to importation. From 1920 to 1937 Canada's imports of distilled spirits from the United Kingdom amounted to 20,275,779 proof gallons, valued at \$357,453,574, while the United Kingdom exports to Canada totalled 20,146,810 proof gallons, valued at \$125,039,058, a slight discrepancy in the quantity but a very considerable discrepancy in the value over a period of years. For the year 1920 the total imports into Canada from the United Kingdom, as well as the imports of distilled spirits, agree fairly well with the total exports and exports of distilled spirits from the United Kingdom to Canada. The statistics in the following table illustrate this feature.

**UNITED KINGDOM'S TOTAL EXPORTS AND EXPORTS OF DISTILLED SPIRITS TO CANADA CONTRASTED WITH CANADA'S TOTAL IMPORTS AND IMPORTS OF DISTILLED SPIRITS FROM THE UNITED KINGDOM**

(Calendar Years, 1920 to 1937)

Calendar Years	Total Exports from United Kingdom to Canada	Total Imports into Canada from United Kingdom	Exports of Distilled Spirits from United Kingdom to Canada		Imports of Distilled Spirits into Canada from United Kingdom

(a) Domestic exports only.

NOTE.—Value of Exports from the United Kingdom to Canada converted into Canadian currency at par of exchange (\$4=8666).

Several factors operating in different directions are involved in the discrepancy between the figures respecting the eastward flow of trade from Canada to the United Kingdom, as recorded in Canadian and United Kingdom statistics.

**EXPORTS FROM CANADA TO THE UNITED KINGDOM CONTRASTED WITH UNITED KINGDOM IMPORTS FROM CANADA**

It is known that large quantities of wheat and other grains which are recorded in Canadian statistics as destined for the United Kingdom do not reach that country but find an ultimate market elsewhere. This is the principal factor in the excess of the Canadian export figures over the United Kingdom import statistics covering presumably the same trade for the years 1932-36, as shown in the above statement. On the other hand, the values in the United Kingdom statistics are C.I.F. and greater than the Canadian F.O.B. export values. In 1937 the exports of wheat from Canada to United Kingdom were unusually small and in contrast to other years the value of wheat diverted from the United Kingdom—the declared destination—was insufficient to outweigh the difference between the United Kingdom C.I.F. import valuations and the Canadian F.O.B. export valuations. There are other forces operating to cause differences in the trade figures, such as the time lag between the time the exports are recorded on leaving Canada and the time the imports are recorded on arrival.

**Principal Imports into Canada from the United Kingdom, 1937-38:**—The increase in imports from the United Kingdom in 1937-38 as compared with 1936-37, was common to all main groups with the exception of Non-Metallic Minerals and Their Products. Fibres and Textiles, as usual, was the largest single main group in Canada's imports from the United Kingdom and amounted to \$50,668,409 in 1937-38 as compared with \$46,633,288 in the preceding year, an increase of 8.7 per cent. Imports of Iron and Its Products constituted the second main group, being valued at \$31,084,817 in 1937-38, an increase of 35.0 per cent over the \$23,033,333 recorded in 1936-37. Imports under Agricultural and Vegetable Products increased from \$17,923,553 in

1936-37 to \$18,507,786 in 1937-38 or 3.3 per cent and Animals and Animal Products from \$5,070,766 to \$5,752,255 or 13.4 per cent. Non-Metallic Minerals showed a decrease of 0.1 per cent from \$13,102,638 in 1936-37 to \$13,092,732 in 1937-38. Wood, Wood Products and Paper increased from \$3,761,818 to \$3,952,707 or 5.1 per cent. Non-Ferrous Metals from \$6,062,639 to \$7,271,504 or 19.9 per cent. Chemicals and Allied Products from \$6,957,434 to \$7,685,055 or 10.5 per cent and Miscellaneous Commodities from \$6,962,416 to \$6,963,105.

Some of the principal items imported into Canada from United Kingdom were as follows. Comparative figures 1936-37 are given in parentheses: Plates and sheets, iron \$15,266,108 (\$11,170,070); Worsteds and serges \$6,279,711 (\$4,814,633); Coal \$5,851,535 (\$6,754,277); Wool, noils and tops \$5,518,112 (\$5,911,141); Vegetable oils \$5,247,513 (\$4,328,395); Distilled spirits \$5,106,292 (\$5,680,584); Flax, hemp and jute products \$4,606,524 (\$4,331,836); Machinery, except farm \$4,278,928 (\$2,776,280); Tableware of china \$3,384,616 (\$2,871,083); Tea \$3,214,952 (\$2,998,675); Woollen yarns \$3,166,808 (\$2,840,345); Cotton goods, dyed or printed \$3,130,305 (\$3,360,355); Cotton yarns \$2,763,071 (\$2,458,341); Artificial silk products \$2,259,611 (\$1,770,466); Books and printed matter \$2,235,682 (\$2,254,729); Electrical apparatus \$2,132,015 (\$1,279,542); Cotton piece goods, bleached or unbleached \$2,010,315 (\$1,603,705); Leather, unmanufactured \$1,956,574 (\$1,357,812); Paints and varnishes \$1,801,118 (\$1,555,349); Wool, raw \$1,752,192 (\$1,990,866); Wire and manufactures \$1,509,693 (\$1,308,138); Glass and glassware \$1,391,229 (\$1,429,446); Furs (chiefly raw) \$1,317,572 (\$1,631,091).

Further details respecting principal imports from United Kingdom will be found in Table 10 on page 77 of this report.

**Principal Domestic Exports from Canada to United Kingdom, 1937-38:**—The increase in Canada's domestic exports to the United Kingdom in 1937-38 as compared with 1936-37 was common to all main groups except Agricultural and Vegetable Products, which declined 26.3 per cent from \$197,083,567 to \$145,274,200. Despite this decline, Agricultural and Vegetable Products remained the largest single main group, accounting for 35.5 per cent of the total domestic exports to United Kingdom. Non-Ferrous Metals and Their Products remained in second place, increasing 42.3 per cent from \$75,819,787 in 1936-37 to \$107,926,841 in 1937-38. Exports of Animals and Animal Products, the third largest group, increased from \$73,350,911 to \$77,996,863 or 6.3 per cent. Wood, Wood Products and Paper increased 25.9 per cent from \$36,064,065 in 1936-37 to \$45,394,428 in 1937-38. Exports of Iron and Its Products were valued at \$16,523,218 in 1937-38 compared with \$13,032,283 in 1936-37, an increase of 26.8 per cent. Chemicals and Allied Products valued at \$4,191,193 in 1936-37 increased 22.7 per cent to \$5,144,611 in 1937-38. Exports of Miscellaneous Commodities increased from \$3,216,036 in 1936-37 to \$3,983,039 in 1937-38; Fibres, Textiles and Textile Products increased from \$2,508,340 to \$3,800,047; and Non-Metallic Minerals and Their Products increased from \$2,730,516 to \$3,368,888; being increases of 23.8 per cent, 51.5 per cent and 23.4 per cent respectively.

Some of the principal exports from Canada to the United Kingdom in 1937-38 were as follows. Comparative figures for 1936-37 are given in parentheses: Wheat \$89,793,196 (\$153,247,606); Copper and products \$35,242,762 (\$25,587,108); Bacon and hams \$32,622,079 (\$27,839,974); Nickel and products \$29,605,514 (\$13,244,478); Planks and boards \$23,106,201 (\$20,768,318); Wheat flour \$13,517,262 (\$10,661,520); Cheese \$11,862,240 (\$9,334,456); Aluminium and products \$11,368,956 (\$8,289,268); Paper and products \$9,270,519 (\$7,027,436); Lead, in pigs, etc. \$9,145,964 (\$8,024,985); Furs, undressed \$8,885,527 (\$10,159,382); Zinc spelter \$8,804,247 (\$6,755,236); Apples, fresh \$7,243,374 (\$4,662,634); Platinum concentrates \$7,116,351 (\$8,052,314); Barley \$6,535,898 (\$2,966,467); Fish \$6,074,563 (\$5,364,510); Wood pulp \$5,180,546 (\$1,944,910); Rubber footwear \$4,963,514 (\$3,490,742); Raw tobacco \$4,930,022 (\$2,653,121); Machinery, except farm \$4,492,832 (\$3,713,677); Pigs, ingots, etc., iron \$4,184,908 (\$2,222,118); Cereal foods \$4,059,487 (\$3,788,426); Leather, unmanufactured \$4,051,287 (\$5,343,490); Lard and compounds \$3,067,398 (\$3,841,468); Oatmeal and rolled oats \$2,743,523 (\$2,648,493); Doors of wood \$2,688,707 (\$2,455,098); Canned vegetables \$2,242,943 (\$1,597,538); Automobiles \$1,891,860 (\$2,146,542); Oats \$1,830,864 (\$2,508,878); Films \$1,758,832 (\$1,514,207); Cattle \$1,590,153 (\$2,767,267); Bars and rods, iron \$1,539,496 (\$1,246,176); Abrasives, artificial, crude \$1,448,649 (\$1,038,343); Farm implements and machinery \$1,412,429 (\$1,086,548).

Further details respecting principal exports to United Kingdom will be found in Table 11, on page 80 of this report.

## TRADE OF CANADA WITH THE UNITED STATES, 1937-38

The United States is Canada's most valuable external market and most important source of supply. In recent years it has absorbed more than forty per cent of the Dominion's export and has supplied nearly sixty per cent of all imports into Canada.

Imports into Canada from the United States in 1937-38 were valued at \$487,307,907, compared with \$393,720,662 in the preceding year and a depression low of \$232,548,055 in 1932-33. In 1937-38 40.7 per cent (roughly the same proportion as in other recent years) of Canada's imports from United States were free of duty. Duty collected on imports increased from \$56,323,541 in 1936-37 to \$66,267,819 in 1937-38. Notwithstanding this increase in revenue, the average rate of duty on dutiable imports (i.e., the amount of duty as percentage of the value of imports) declined from 23.8 per cent in 1936-37 to 22.9 per cent in 1937-38.

Domestic exports from Canada to the United States were valued at \$423,131,091 in 1937-38 compared with \$435,014,544 in the preceding year and with a depression low of \$197,424,723 in 1932-33.

In 1937-38 the balance of trade with the United States was unfavourable to the extent of \$52,222,260, compared with a favourable balance in 1936-37 of \$52,368,655.

**Discrepancy Between Canada—United States Trade Statistics:**—In considering the discrepancy between Canada's statistics of trade with the United States and the United States statistics of trade with Canada, many factors must be noted. In the United States, Alaska, Hawaii and Puerto Rico are considered as United States territory for trade and other purposes, while in Canada they are considered as separate entities. In the United States, raw gold, gold

bullion, non-monetary, silver ore and silver bullion are not included in the general trade figures, whereas in Canada these non-ferrous metals are included. When these adjustments are made in the exports from Canada to the United States there is still a discrepancy in the movement of products from Canada to the United States, as recorded in the trade figures of the two countries amounting to less than 2 per cent in 1928 and 1929; about 3·7 per cent in 1930; 6 per cent in 1931, 1932, 1933; 2 per cent in 1934; about 9·0 per cent in 1935; 10·2 per cent in 1936 and 7·1 per cent in 1937 as indicated in the following table:—

## MOVEMENT OF GOODS FROM CANADA TO THE UNITED STATES

(Calendar Years, 1928 to 1937)

Calendar Years	Imports into United States from Canada	Exports from Canada to United States (c)	Discrepancy: Excess Imports (b) Exports (a)
	\$	\$	\$
1928.....	489,300,000	498,500,000	(a) 9,200,000
1929.....	504,300,000	512,100,000	(a) 7,800,000
1930.....	402,300,000	386,600,000	(b) 15,700,000
1931.....	266,300,000	248,500,000	(b) 17,800,000
1932.....	174,100,000	164,000,000	(b) 10,100,000
1933.....	185,400,000	171,300,000	(b) 14,100,000
1934.....	227,300,000	222,100,000	(b) 5,200,000
1935.....	285,100,000	259,500,000	(b) 25,600,000
1936.....	377,600,000	339,000,000	(b) 38,600,000
1937.....	394,200,000	366,400,000	(b) 27,800,000

(c) Canadian figures adjusted by adding to the exports to United States, exports to Alaska, Hawaii and Puerto Rico, and deducting exports of raw gold, gold bullion, non-monetary, silver ore and silver bullion.

With reference to the above discrepancy, it is significant (1) that in the years 1928 to 1930 Canada exported large quantities of alcoholic beverages to the United States, while the United States in these years recorded no imports of alcoholic beverages from Canada; and (2) that from 1928 to 1935 the United States wheat imports from Canada were much in excess of Canada's wheat exports to the United States, due to the fact that large quantities of wheat shipped to overseas countries via the United States were diverted to the United States, this diverted wheat being credited to Canada in United States trade statistics, though Canada had no export record of such diversions. If these differences, 1930 to 1935, are taken into account, it will be found that the discrepancy in the foregoing table in favour of the United States in 1930 would be reduced by about \$4,000,000; in 1931 by \$7,000,000; in 1932 by about \$5,000,000; in 1933 by about \$5,700,000; in 1934 by about \$3,800,000; and in 1935 by about \$13,800,000.

There is a considerable discrepancy between the Canadian imports from the United States and United States exports to Canada, even when adjustments are made in Canada's imports. This is largely due to United States recording in their exports to Canada, especially grains, mainly wheat, which are only intransit via Canada to overseas countries. The United States Department of Commerce is aware that a large percentage of the exports shown as shipped to Canada are really only intransit to overseas countries via Canada. On pages 31 and 32 of Trade Information Bulletin No. 602 re "Foreign Trade of the United States, 1928", the Bulletin states that "The figures of trade by continents, as originally published, are somewhat misleading in the case of exports to North America and to Europe. This is due to the fact that especially during recent years large quantities of grain have been shipped through Canada to foreign countries, almost exclusively to Europe, which, because the exporter at the time of shipment does not know the final destination, are credited to Canada". Such shipments do not appear in the import or export trade of Canada, being considered as intransit trade. The amount of these grain shipments to Canada has varied in recent years, in 1928 amounting to \$82,800,000 and in 1937 to \$14,434,000. It will appear from the statistics in the following table that when these grain shipments are eliminated from the United States exports to Canada, the revised United States exports to Canada and Canada's adjusted imports from the United States agree fairly well, except for the years 1932 and 1935. In fact, the discrepancy between the two sets of figures is less than 4 per cent, except for the years 1932 and 1935.

## MOVEMENT OF GOODS FROM THE UNITED STATES TO CANADA

(Calendar Years, 1928 to 1937)

(c) Canadian figures adjusted by adding to the imports from United States, imports from Alaska, Hawaii and Puerto Rico and deducting imports of gold, unmanufactured, for commercial purposes, and silver bullion.

**Principal Imports into Canada from the United States, 1937-38:**—Two of the main groups showed declines in imports in 1937-38 as compared with 1936-37. Animals and Animal Products declined 8.2 per cent from \$12,659,575 in 1936-37 to \$11,621,353 in 1937-38 while Fibres, Textiles and Textile Products decreased from \$37,176,542 to \$36,151,574 or 2.8 per cent. Of the main groups showing increases in imports, Iron and Its Products was the largest, increasing from \$121,742,147 in 1936-37 to \$170,603,311 in 1937-38 or 40.1 per cent. Non-Metallic Minerals and Their Products was in second place, increasing 21.5 per cent from \$86,809,009 in 1936-37 to \$105,491,493 in 1937-38. Agricultural and Vegetable Products was third in value of imports among the increasing groups showing a gain of 20.5 per cent to \$46,115,565 in 1937-38 from \$38,267,822 in 1936-37. Miscellaneous Commodities increased from \$29,216,009 in 1936-37 to \$35,824,640 in 1937-38 or 22.6 per cent; Non-Ferrous Metals and Their Products increased from \$25,400,426 to \$30,954,351 or 21.9 per cent; Wood, Wood Products and Paper increased from \$23,060,903 to \$27,830,148 or 20.7 per cent; and Chemicals and Allied Products increased 17.1 per cent from \$19,388,229 in 1936-37 to \$22,712,830 in 1937-38.

Some of the principal items imported into Canada from the United States in 1937-38 were as follows. Comparative figures for 1936-37 are given in parentheses: Machinery (except farm) \$42,667,842 (\$27,403,682); Crude petroleum \$36,680,968 (\$30,755,321); Coal \$31,358,750 (\$26,355,329); Automobile parts \$29,532,173 (\$27,180,371); Rolling mill products \$24,123,771 (\$17,597,625); Farm implements and machinery \$18,181,100 (\$10,141,308); Cotton, raw \$16,957,618 (\$19,257,365); Fruits \$15,589,812 (\$15,539,422); Automobiles \$14,786,340 (\$9,636,151); Electric apparatus \$12,447,979 (\$10,361,262); Books and printed matter \$12,134,229 (\$9,604,884); Engines and boilers \$9,093,457 (\$7,502,600); refined petroleum \$9,020,689 (\$6,794,691); Stone and products \$7,618,673 (\$4,977,627); Paper and products \$5,706,905 (\$4,955,607); Silk and products \$5,546,439 (\$5,395,986); Rubber and products \$5,060,912 (\$4,181,685); Vegetables, fresh \$4,579,084 (\$4,186,605); Lumber and timber \$4,396,835 (\$3,964,469); Clay and products \$4,162,966 (\$3,400,560); Glass and glassware \$3,959,066 (\$3,747,325); Aluminium and products \$3,825,005 (\$2,944,919); Furs, chiefly raw \$3,638,502 (\$4,706,597); Sulphur \$3,617,447 (\$2,835,461); Iron ore \$3,398,761 (\$1,584,701); Vegetable oils \$3,077,364 (\$3,208,603); Scientific and educational equipment \$3,063,423 (\$2,464,478); Settlers' effects \$2,730,831 (\$2,255,406); Brass products \$2,670,764 (\$2,391,690); Castings and forgings \$2,617,257 (\$1,557,108); Metallic articles for agricultural implements \$2,450,545 (\$1,382,075); Paints and varnishes \$2,349,365 (\$2,522,492); Dyeing and tanning materials \$2,222,133 (\$2,254,144); Compounds of tetraethyl lead \$2,112,067 (\$1,464,848); Precious metals and products \$2,073,468 (\$2,240,625); Drugs and medicines \$2,028,504 (\$1,731,719).

Further details respecting principal imports from the United States will be found in Table 12 on page 83 of this report.

**Principal Exports from Canada to the United States, 1937-38:**—The decrease in exports to the United States was confined to three of the nine main groups. Agricultural and Vegetable Products suffered the largest decline from \$73,603,221 in 1936-37 to \$33,180,317 in 1937-38 or 54.9 per cent. Fibres, Textiles and Textile Products declined 28.0 per cent from \$3,003,772 in 1936-37 to \$2,161,630 in 1937-38 and Animals and Animal Products showed a decrease of 8.3 per cent from \$46,431,986 to \$42,572,671. Wood and Wood Products and Paper was the largest of the six groups to show increase, registering a gain of 9.9 per cent to \$168,990,162 in 1937-38 from \$153,717,675 in 1936-37. Non-Ferrous Metals and Their Products was second, increasing from \$117,328,297 in 1936-37 to \$132,783,014 in 1937-38 or 13.2 per cent. Non-Metallic Minerals and Their Products increased from \$17,080,392 to \$17,373,163, Miscellaneous Commodities from \$9,077,366 to \$10,015,602, Chemicals and Allied Products from \$8,699,580 to \$9,109,196 and Iron and Its Products from \$6,072,255 to \$6,945,336, being increases of 1.7 per cent, 10.3 per cent, 4.7 per cent and 14.4 per cent respectively, 1937-38 over 1936-37.

Some of the leading exports from Canada to the United States in 1937-38 were as follows. Comparative figures for 1936-37 are given in parentheses: Newspaper paper \$99,588,555 (\$89,166,874); Non-monetary gold bullion \$83,692,300 (\$74,790,768); Wood pulp \$29,471,434 (\$28,602,029); Nickel and products \$19,057,109 (\$23,651,627); Whiskey \$18,500,716 (\$21,450,569); Planks and boards \$14,178,502 (\$14,165,558); Fish, all kinds \$12,650,401 (\$12,121,028); Cattle \$12,090,320 (\$11,010,036); Pulpwood \$11,817,955 (\$8,544,006); Copper and products \$7,587,725 (\$3,089,411); Asbestos, raw \$7,439,412 (\$7,100,941); Gold-bearing quartz, dust, etc. \$7,229,580 (\$6,326,990); Stone and products \$6,391,085 (\$5,634,679); Shingles \$6,247,531 (\$6,432,913); Silver bullion \$6,136,389 (\$4,538,264); Fertilizers \$5,291,303 (\$4,459,772); Furs, undressed \$4,428,199 (\$7,363,645); Electrical energy \$4,078,032 (\$3,760,966); Farm implements and machinery \$3,743,473 (\$1,926,351); Meats \$3,271,705 (\$3,033,299).

Further details respecting principal exports from Canada to the United States will be found in Table 13 on page 86 of this report.

**Exports to United States in Relation to United States Tariffs:**—Under the Underwood Tariff, which was in force in the United States from October 3, 1913 to May 27, 1921, Canada increased domestic exports to the United States from \$139,725,000 to \$542,323,000 from 1912-13 to 1920-21 while the exports of farm products in 1920-21 totalled \$190,790,000. Under this Tariff 88.4 per cent of Canada's exports to the United States in 1920 was admitted duty free. Under the Emergency Tariff, which was in force from May 27, 1921 to September 21, 1922, and the Fordney-McCumber Tariff, from September 21, 1922 to June 18, 1930, Canada's exports of farm products (chiefly raw materials) from 1920-21 to 1929-30, decreased from \$190,790,000 to \$92,134,000, while under the Hawley-Smoot Tariff, which came into force on June 18, 1930, Canada's exports of farm products to the United States show a further decline, the exports amounting to \$6,048,000 in 1932-33. In 1933-34 they had increased to \$28,655,000, in 1934-35 to \$49,294,000, and in 1935-36 to \$61,897,000 being \$30,237,000 less than in 1929-30. A heavy duty was imposed on fish under the Fordney-McCumber and Hawley-Smoot Tariffs, which seriously affected the market in the United States for Canadian fish, while in June, 1932, the United States placed a heavy duty on softwood lumber and copper, which also seriously affected Canada's exports of lumber and copper to the United States.

The statistics in the following table showing Canada's exports of certain farm, fish, copper and lumber products to the United States, years 1920-21 to 1937-38, reflect the extent to which the exports of these products were affected by changes in the United States Tariff Acts of 1921, 1922, 1930 and 1932. The Canada-United States Trade Agreement became effective on January 1, 1936.

CANADA'S EXPORTS OF CERTAIN FARM, FISH, LUMBER AND COPPER PRODUCTS TO

The Canada-United States Trade Agreement, which became effective on January 1, 1936, opened to the Dominion wider markets in all main divisions in Canada's production. Concessions were secured in respect to 88 items. Of these, 63 represented reductions in previously existing duties, 4, a guarantee of existing rates against increase and 21, assurance of continued free entry.

In agricultural products concessions were obtained on cattle, cream, seed potatoes, clover and grass seeds, hay, turnips and maple sugar. Substantial reductions were secured on fresh or frozen halibut, salmon and certain fresh lake fish, pickled or salted salmon and smoked herring. On lumber and timber a cut of 50 per cent was provided in Customs duties and excise taxes. In the mineral field, feldspar, talc, lime and various ferro-alloys were given reductions. Among manufactured products concessions were obtained for acetic acid, pulpboard in rolls for wall-board, whiskey, patent leather and harness and saddlery leather. The existing free entry was assured during the operation of the Agreement for a score of items of which newsprint, wood pulp, pulpwood, shingles and lobsters are specially notable.

The following table shows Canada's exports to United States according to the various types of concession gained. The figures are for the calendar years 1936 and 1937, the first two full years operation of the Agreement, with comparative figures for 1935.

## DOMESTIC EXPORTS FROM CANADA TO THE UNITED STATES

## TRADE OF CANADA VIA UNITED STATES

The three following tables show in summary the value of Canada's imports and exports via the United States, and principal commodities exported from Canada to overseas countries via the United States and via Canadian sea or river ports. Included with exports shown as being shipped via the United States are substantial amounts of grain, and possibly other commodities, exported from Canada (e.g., from Fort William and Port Arthur) via the United States, which are subsequently re-routed from United States for shipment via Canadian sea or river ports, chiefly Montreal, and to this extent the figures respecting exports via the United States are overstated.

## PROPORTIONS OF TRADE IN RAW AND MANUFACTURED PRODUCTS

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed; a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century, Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported, rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the rapid decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages of both imports and exports of manufactures on a value basis.

# CONDENSED PRELIMINARY TRADE REPORT

35

STATEMENT SHOWING VALUE AND PROPORTION OF RAW MATERIALS AND PARTLY AND FULLY MANUFACTURED GOODS IMPORTED INTO AND EXPORTED FROM CANADA 1899-1900 TO 1937-38 AND THE UNITED STATES, 1899-1900 TO 1937

In Canada, grains (chiefly wheat) and in the United States, raw cotton, grains (principally wheat) and raw tobacco are the leading commodities which comprise the bulk of the exports of raw materials. It is of interest to note the results in Canada and the United States when certain staple raw materials of farm origin, which are reproducible annually, are eliminated, such as grains, fresh fruits and vegetables, seeds and raw tobacco, for both countries, and raw cotton for the United States. The results, for the years 1900 to 1937, are set forth in the following table:—

RAW MATERIALS EXPORTED FROM CANADA 1899-1900 TO 1937-38 AND THE UNITED STATES, 1899-1900 TO 1937

(Values in Millions of Dollars)

Fiscal Years	Canada's Exports of Raw Materials (Years ended June 30, 1900 and 1905, and March 31, 1910 to 1938)				United States Exports of Raw Materials (Years ended June 30, 1900 to 1933 and calendar years, 1933, 1934, 1935, 1936 and 1937)

It will be observed from the statistics in the following table, showing "Canada's Imports and Exports by Leading Countries, according to Degree of Manufacture", fiscal year 1937-38, that Canada's imports from those countries with highly developed manufacturing industries consist of manufactured products and her exports to those countries are made up largely of raw and semi-manufactured products; while on the other hand Canada's trade with countries whose industries are not so highly developed consist chiefly, in the case of imports, of raw and semi-manufactured products and in the case of exports, of manufactured products.

### EXPORTS OF GOLD IN CANADIAN STATISTICS

In Canadian trade statistics gold exported as merchandise is included as such as a part of the total commodity exports. Gold exported is considered merchandise when the export does not reduce domestic monetary reserves. The present procedure was determined by the Bureau of Statistics in conference with the Bank of Canada and the Department of National Revenue and dates from April 1, 1936. Statistics for earlier years have been revised back to 1926. In former times there was a movement of gold from Canada in the form of "Gold bearing quartz, dust, nuggets and gold bullion obtained direct from mining operations". When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as "Gold bearing quartz, dust, etc." began to be exported in the form of bullion and was recorded under Coin and Bullion as distinct from Merchandise. In order to maintain comparability with the statistics of previous years, and also since Canada is a large gold-producing country and exports of gold are as much a part of national production as any other item, it was considered expedient to make the change indicated.

Since February, 1936, the Bank of Canada has been holding gold under earmark for clients abroad. This fact directly influences exports. Holdings of gold under earmark from February, 1936 to March, 1938, are shown below:—

### CHANGES IN HOLDINGS OF EARMARKED GOLD BY THE BANK OF CANADA

## TRADE OF CANADA COMPARED WITH WORLD TRADE

The moderately upward progress of world trade which was noted in 1936 continued in 1937, although a definite slowing up was apparent in the last half of the year. According to calculations of the League of Nations, the value of world trade, taking 1929 as 100, reached 46.2 in 1937 compared with 37.4 in 1936. On a volume basis the index for the full year 1937 stood at 97.5 compared with 85.9 in 1936. The falling off in the latter part of 1937 is indicated by the fact that the index volume for the second quarter attained the 1929 level, or 100. Preliminary statistics indicate that the bulk of the growth of world trade is accounted for by raw materials largely of mineral origin. The general picture of world trade is one in which the dominant characteristics remain hazy and indistinct. European trade policies, in particular, continue to be subordinated to political and non-commercial factors. Although several advances were made in the actual removal or reduction of restrictions on world commerce, in general, trade barriers remain high.

The factor of monetary instability has greatly diminished in importance although uncertainty regarding the price of gold and the difficulty in stabilizing the French franc were disturbing elements. Ocean freight rates rose appreciably during the year and undoubtedly exercised considerable influence on the composition and amount of world trade.

## NET IMPORTS AND DOMESTIC EXPORTS OF TWENTY-SEVEN COUNTRIES, WITH PERCENTAGE INCREASE OR DECREASE, 1937 COMPARED WITH 1936

Total.....	17,810	22,111	16,029	19,496	+ 24.1	+ 21.6

(a) Computed from League of Nations "Monthly Bulletin of Statistics".

The statistics in the table above indicate the generality of the upward movement of trade in 1937 as compared with 1936. All twenty-seven countries recorded increases in exports and China alone failed to show an increase in imports. Exports from Canada increased 9.4 per cent and imports 27.7 per cent, compared with increases of 21.8 per cent and 24.1 per cent respectively for the total of the twenty-seven countries in the table.

**Canada's Position in World Trade:**—It will be seen from statistics in the following table that Canada maintained its rank among the leading trading nations as the world's fourth exporting country and eighth in respect to imports. In total trade Canada moved from fifth to sixth position, being supplanted by Japan whose trade, particularly imports, reflected the stimulus to import requirements arising out of military activities in China.

TRADE OF LEADING COMMERCIAL COUNTRIES OF THE WORLD IN CANADIAN CURRENCY

**Production and Export, by Countries, of Canada's Principal Export Commodities:—**

The trade of Canada is, of course, partly the result of the necessity to procure abroad those commodities which are lacking in Canada or which domestic industry does not supply in sufficient quantity; but perhaps in even greater measure it derives from the Dominion's great wealth of natural resources and productive capacity, which can only be most profitably exploited through wide participation in external markets.

In the production of many important commodities Canada ranks high among the countries of the world. The Dominion is first in the production of asbestos, nickel and newsprint, supplying normally over half the world's asbestos, over eighty per cent of the world's nickel, and more newsprint than the rest of the world combined. In the production of zinc Canada was second in 1937, in copper and gold, third, and lead and automobiles, fourth. In wheat production Canada stood in ninth position.

In export trade the Dominion led the world during 1937 in exports of newsprint paper, nickel and asbestos, was second in exports of wheat, and third in exports of wheat flour and rubber tires. Canada ranked fourth with respect to exports of automobiles and wood pulp. Canada also ranks high among the world's exporters of many other products, such as lumber and timber, fish, copper, barley, cheese, raw furs, whiskey, meats, farm implements, cattle, gold, silver, rye, oats, rubber footwear, leather and hides.

## HISTORICAL SUMMARY OF CANADA'S TRADE BY DECADES

(Fiscal Years 1889-90 to 1929-30 and 1937-38)

The statements which follow show the long term trend of Canada's imports and exports by commodities and countries in the fiscal years 1890, 1900, 1910, 1920, 1930 and 1938. In the interpretation of trends it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889; 52.1 in 1899; 59.5 in 1909; 134.0 in 1919; 95.6 in 1929; and 84.6 in 1937. These calendar years approximate the fiscal years shown in the tables following. The fiscal year 1910 was influenced by the general development boom in Western Canada; 1920 was affected by the feverish activity which immediately followed the War; 1930 represented the end of the security inflation period and the beginning of the downturn; while in 1936-37 recovery from the depth of the depression was well established, although world trade in general remained sluggish compared with internal recovery in many countries.

During the period of 48 years covered by the statement below, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus, in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus and aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000, but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products and meats, have become relatively less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century many of the leading imports are now raw materials required by Canadian industries.

## CANADA'S LEADING IMPORTS

(Fiscal Years 1889-90, 1899-1900, 1909-10, 1919-20, 1929-30 and 1937-38)

Over the period of 48 years covered by this statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas and fisheries. Of the six leading exports in 1938, five were unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, lead, aluminium and platinum. Furthermore, expansion in the gold-mining industry has kept pace with that of the aforementioned metals and exports of Non-Ferrous Metals now constitute the largest group in Canada's export trade.

## SUMMARY OF CANADA'S IMPORTS BY PRINCIPAL COUNTRIES

(Fiscal Years 1889-90, 1899-1900, 1909-10, 1919-20, 1929-30, 1937-38)

## PREFACE

All features of previous issues of the Condensed Preliminary Trade Report are continued in the present number. It consists of two main sections—a Review of Canada's Foreign Trade during the fiscal year just closed (1938-39) and a series of statistical tables ("Condensed Statistical Record of Canadian Trade") partly summary and historical, but mainly a presentation of the main items of the trade of Canada with the more important countries of the world.

In the first section the external trade of Canada is examined from several angles and the outstanding features of the year are set out in both text and tabular form. This section also contains an historical summary of Canada's import and export trade by decades for 1889-90 to 1929-30 and for the fiscal year 1938-39, distinguishing imports and exports for principal countries and commodities.

All tables have been revised and expanded to meet altered conditions of trade. Canada's trade with ninety-eight different countries is dealt with.

Throughout the report figures for the fiscal year ended March 31, 1938-39, are unrevised; those for earlier years are final.

The report was prepared in the External Trade Branch of the Dominion Bureau of Statistics under the direction of Mr. A. L. Neal, B.A., B.Sc. (econ.), Chief.

R. H. COATS,

Dominion Statistician

DOMINION BUREAU OF STATISTICS,  
OTTAWA, July 3, 1939.

## REVIEW OF CANADA'S FOREIGN TRADE, 1938-39

The expansion in Canada's external trade during the fiscal years 1933-34 to 1937-38 was halted in 1938-39. Total trade, imports and exports combined, in 1938-39 amounted to \$1,627,998,000 compared with \$1,883,891,000 in 1937-38. Imports declined by 17.6 per cent to \$658,228,000. Total exports dropped 10.6 per cent to \$969,770,000, increases in September and in the last three months of the year not being great enough to counterbalance earlier declines. Domestic exports excluding gold amounted to \$831,260,000 in 1938-39 compared with \$976,563,000 in the previous year.

The declines in imports and exports were the result of lower prices and smaller volume. Exports were affected more seriously than imports by the decline in prices, while the contraction in volume was almost negligible, being less than one per cent. The volume of imports dropped 13 per cent.

Due to the greater fall in the value of imports than exports, the large favourable balance of trade on merchandise account of 1937-38 increased in the fiscal year 1938-39 by \$26,000,000 to \$311,542,000. Outside the extraordinary war years this large favourable balance of trade was only twice exceeded in Canada's history, in 1925-26 and in 1936-37.

1938-39.....	658,228,034	926,962,245	42,807,906	969,770,151	1,627,998,185	(-) 163,756,774

NOTE.—It is pointed out with reference to the statistics in the above table, and particularly regarding Canada's imports in 1935-36, 1936-37, 1937-38 and 1938-39 throughout this report, that the excise duty which has been included in the value of distilled spirits, chiefly whiskey imported into Canada, from countries entitled to the British Preferential Tariff since the fiscal year 1920-21, is excluded as from April 1, 1935. Imports in 1935-36 to 1938-39, particularly from United Kingdom, are consequently lower than would otherwise be the case.

Gross revenue collected on imports declined from \$103,120,000 in 1937-38, the highest amount in any year since 1931-32, to \$89,273,000 in 1938-39. The average ad valorem rate of duty (i.e. the amount collected expressed as a percentage of the value of imports) at 13.6 per cent was up slightly in 1938-39 as compared with 13.0 per cent in 1937-38. On dutiable imports alone the rate was 23.9 per cent in 1937-38 and 24.2 per cent in 1938-39. The proportion of imports which were free of duty was somewhat lower in 1938-39 than in the previous year.

## COMPARISON OF VALUE AND VOLUME OF CANADA'S TRADE 1937-38 AND 1938-39

It is important to bear in mind when comparing trade over different periods that changes in value are not necessarily a measure of changes in the quantity or volume of merchandise involved. Changes in the values of imports and exports over a period may be caused either by variations in quantity, by fluctuations in prices or by a combination of those factors. A preliminary compilation has been made comparing the value and volume of Canada's trade for the fiscal year 1938-39 with that of 1937-38. The results are set forth in the table below. The declared values by main groups are shown for both years, together with the values obtained by re-valuing the quantities of 1938-39 at the average unit prices prevailing in 1937-38. By this means the element of price fluctuation is eliminated and a comparison of the volume of trade in the two years is obtained. The percentage increase or decrease in the declared value and volume is shown in the last two columns of the table. The change in unit values or prices over the period as distinct from the total declared values may be ascertained by expressing the amounts obtained by the revaluation as percentages of the values as declared in 1938-39.

The declared value of imports amounted to \$658,228,000 in 1938-39, as compared with \$799,070,000 in the previous fiscal period. If there had been no fall in prices, imports in 1938-39 would have amounted to \$693,906,000. The decline of \$140,842,000 or 17.6 per cent was the

result of both lower prices and smaller physical volume. The latter declined by 13.2 per cent, while the former fell about 5 per cent.

It will be noted that all main groups of imports declined in 1938-39 as compared with 1937-38 both in declared value and on the basis of the revaluation. A study of the table below indicates that "Agricultural and Vegetable Products", "Animal Products", "Textiles" and "Non-Ferrous Metals" were more influenced by lower prices than the other groups of imports. The 26.5 decline in the "Iron" group was almost wholly accounted for by smaller volume.

Exports also declined in value and volume, although the decline in volume was less than one per cent as compared with the previous year. Total domestic exports in 1938-39 were declared at \$926,962,000 as compared with \$1,070,229,000 in the previous fiscal period. If there had been no fall in prices the value of exports would have amounted to \$1,063,492,000.

It may also be noted that the "Barter Terms of Trade" were less favourable to Canada in 1938-39 than in 1937-38. This resulted from the fact that the average unit values or prices of exports declined more than the unit values of imports. Export unit values declined from 100 in 1937-38 to 81.2 in 1938-39, while import prices fell from 100 to 94.9. Expressed differently this means that assuming it took 100 units of exports to pay for 100 units of imports in 1937-38 the same 100 units of exports could command only 85.6 units of imports in 1938-39.

## PRINCIPAL IMPORTS INTO CANADA, 1938-39

Imports of Agricultural and Vegetable Products, Mainly Food, in 1938-39 were down 17.1 per cent from the previous fiscal year, a fall very close to that of all imports. Among the foods, each of the sub-groups of fresh, dried and preserved fruits, grains and products, shows a slightly greater decline, while nuts, vegetables, sugar, tea and coffee tended to maintain their 1938 levels. Thus, of the largest items, we find sugar down only 2 per cent, at \$20,281,515; tea down 3 per cent, at \$9,598,848; coffee down 4 per cent, at \$3,996,208.

Agricultural and Vegetable Products, Other Than Food show a fall of 29 per cent below the previous year. Of the constituents, alcoholic beverages were down only 8 per cent, while non-food vegetable oils had fallen from \$15,167,090 to \$9,914,625 or 35 per cent, and rubber and its products were down by the same percentage, at \$12,105,836. Among the imports showing a marked rise between the fiscal years 1937-38 and 1938-39 was tobacco, imports of which in the latter year amounted to \$2,281,783, a gain of 55 per cent.

Animals and Animal Products fell, though fish, both fresh and preserved, showed increases, as did total meats. Milk, oils, sausage casings, furs, hides and leather, all declined from the previous year.

Fibres, Textiles and Textile Products fell from \$108,932,000 to \$84,984,000 a drop of 22 per cent. The drop was comparatively uniform among the various textile materials imported—cotton, flax, silk, wool, and mixed textile products, though artificial silk was a notable exception.

Though Wood, Wood Products and Paper fell 6.7 per cent, to \$31,942,000, its chief section "Books and Printed Matter" rose 2.5 per cent, to constitute this year very nearly half of the group in value. Paper board increased in value and volume, while wrapping paper and writing paper increased in volume and decreased in value.

Iron and Its Products, constituting by value the leading import group, shows the heaviest fall from the fiscal year 1937-38 to 1938-39. Rolling mill products, at \$23,482,000, including plates and sheets, at \$16,649,000 was but little more than half their previous year's values and were responsible for \$19,000,000 of the \$55,000,000 decline in the group total. Engines and boilers fell 34.4 per cent, to \$7,133,000; machinery (total) 27.0 per cent, to \$35,287,000; and automobiles and parts 19.2 per cent, to \$36,587,000; but farm implements held close to their 1938 level (down only 6 per cent, to \$18,080,000). 2,581 harvesters were imported, against 1,244 the previous year, more than doubling this item.

Imports of the most of Non-Ferrous Metals were down, their total being 23.0 per cent under the previous year, at \$36,254,000. Alumina, bauxite and cryolite apparently fell sharply in price, for, taken as a whole, the volume of these items was up 20.6 per cent, while their value declined 38.0 per cent. Brass, lead, copper, silver, tin and zinc were down, as was electric apparatus (off 20.0 per cent), which latter constitutes one-third by value of the group.

The total of Non-Metallic Mineral Products was 11.2 per cent below 1938, and its two main sections "Petroleum and Asphalt" and "Coal and Products", valued at \$55,903,000 and \$39,241,000, respectively, were 11.0 per cent and 5.6 per cent below. Diamond dust at \$3,873,000; sand and gravel at \$331,696; salt at \$438,000; sulphur at \$1,376,000; fire bricks at \$1,749,000, were all under the previous year's mark.

Chemicals as a group was down only 5.4 per cent. The largest single item of the group was compounds of tetraethyl lead, which rose 15.4 per cent. Fertilizers also were up 8.9 per cent, at \$3,863,293, but the other sections—acids, paints and varnishes, soap and sodium compounds were down, mostly by small amounts.

Most of the items of the Miscellaneous group held close to their 1937-38 level, the total being down only 0.4 per cent, at \$49,128,000. Works of art, scientific and educational equipment and musical instruments all showed increases, while amusement and sporting goods, household and personal equipment and containers, declined.

**Imports of One Hundred Leading Commodities.**—The statement below shows imports into Canada of one hundred leading commodities, or groups of commodities. Further details of imports by commodities will be found in Table 8 on page 74 of this report. The items shown in the following statement constitute 78.2 per cent of total imports in the year 1938-39. Examination of the table reveals that thirteen of the hundred items increased in value of imports, while of the fifty-one items for which quantity statistics are shown, sixteen increased in volume. In spite of the general trend gasoline and artificial silk yarns scored notable increases in imports, both by quantity and value.

**Imports for Canadian Industry.**—Canada, like other manufacturing countries, is dependent on imports in large measure for its supply of numerous raw materials, such as petroleum, oils, coal, raw cotton, rubber, raw silk, sisal fibre, iron ore, bauxite, sulphur, manganese oxide, etc. Also, Canadian industry in its present state of development needs to import many processed articles for further finishing in Canada. The table below shows the imports into Canada of seventy commodities for Canadian industry. The list is not exhaustive but it represents, nonetheless, 33.3 per cent of total imports in 1938-39, or \$219,260,034.

## CANADA'S IMPORTS OF SEVENTY LEADING COMMODITIES FOR CANADIAN INDUSTRIES

## PRINCIPAL EXPORTS FROM CANADA, 1938-39

Though the total value of section A Mainly Food of Agricultural and Vegetable Products fell by 21 per cent, to \$147,351,121 in the fiscal year 1938-39 as compared with 1937-38, most of its components showed an increase. Wheat and wheat flour were responsible for \$38 millions out of the \$40 millions decline in the group. In these items the drop was due entirely to lower prices. The quantity of wheat exports rose by 31 million bushels to 121,000,000, but the average price recorded for exports in 1938-39 was but \$.70 as against \$1.30 in 1937-38. The year under review saw a steady fall in wheat prices, Manitoba red declining from 7/2 per 100 lbs. at Liverpool in April, 1938, to 4/8 in March, 1939, a not surprising accompaniment of the very large world wheat crop. Canned fruits and vegetables showed improvement over the previous year in both volume and value. The index of volume of exports in the group as a whole was up 18.3 per cent for the year.

In section B of Agricultural and Vegetable Products, of the decline of \$13,000,000 in the total, alcoholic beverages accounted for almost \$10,000,000. Rubber and its products—this year the largest division of Section B in value—was down one and one-half million dollars, at \$15,555,000.

In the Animal and Animal Products group, fish, furs and milk and its products maintained exports at the level of the previous year, but the total was brought down from \$136,113,000 to \$121,242,000, or 11 per cent, by the declines in exports of live animals and meats.

Fibres, Textiles and Textile Products was down only 7 per cent, at \$13,251,000, its two largest sections, "Cotton and Products" and "Socks and Stockings", being down 11 per cent, and up 3 per cent, respectively.

Wood, Wood Products and Paper, second largest of the main groups of exports, stood at 214 million dollars for the fiscal year 1938-39—15 per cent below 1937-38. Of its main sub-groups, planks and boards (\$37,101,000) was down 15 per cent; wood pulp (\$26,814,000) was down 33 per cent; paper (\$115,025,000) was down 11 per cent. Of all Canadian exports none is more sensitive to United States market conditions than paper, for Canada supplies 90 per cent of the United States imports.

Among Iron and Its Products (1939 total \$58,682,000), there was a very decided drop in pigs, ingots, blooms and billets, the value of these exports being cut in half. This was balanced by an increase from \$2,926,000 to \$4,619,000 in rolling mill products, and increases also in wire, engines and boilers, hardware and cutlery. Showing declines of 10 to 20 per cent were tubes and pipes, machinery, tools, and vehicles. Passenger automobiles at \$16,093,000 were only \$800,000 below their previous year level, but farm machinery dropped 40 per cent to \$6,453,000.

The largest main group was again Non-Ferrous Metal Products, which, at \$272,633,000, was 7 per cent below the previous year. Aluminium, gold, and cobalt showed gains (the latter doubling in value), while brass, copper, lead, nickel and zinc all declined by amounts varying from 6 to 45 per cent.

The Non-Metallic Minerals group fell off from \$29,342,000 to \$24,579,000, a drop of 16 per cent. Asbestos, which regularly constitutes about half of the exports under this heading, was down less than 3 per cent in value; its holding up was due to an increase in price, for the quantity exported fell by 18 per cent. Coal showed a slight rise. Other items—glass, coke, mica, graphite, petroleum, stone and its products, fell off.

In the Chemical group, cobalt oxides, medicinal drugs, fertilizers, and soap showed increases, while acids declined; in chemicals as a whole the falling off was only 2 per cent, to \$20,583,000.

The Miscellaneous group, down only \$37,000 from its 1937-38 figure of \$18,665,000, came nearest to showing an increase of the nine classes of exports. Aeroplanes, containers, electrical energy, jewellery and refrigerators rose, while settlers' effects and cameras fell off.

The following table shows exports of eighty-six leading commodities from Canada in 1938-39 with increase or decrease, compared with 1937-38. The items shown account for over 93 per cent of total exports. Sixty-one of the eighty-six items increased in value of exports and twenty-nine of the items for which quantities are recorded increased in volume.

## DISTRIBUTION OF CANADA'S TRADE BY CONTINENTS AND COUNTRIES

The decline in imports into Canada in 1938-39 as compared with 1937-38 affected purchases from all continental groups except "Other North America". As a source of supply to Canada, North America was in first position by a wide margin. Imports from North America were predominantly from the United States which supplied over sixty-two per cent of the Dominion's total imports and more than two and one-half times those obtained from Europe. The proportion of imports obtained from North America increased from 63.1 per cent of the total in 1937-38 to 65.3 per cent in 1938-39.

Canada sold more goods to Europe in 1938-39 than to any other continent except North America. Total exports to Europe amounted to \$401,600,000, of which the United Kingdom absorbed \$325,500,000. North America took first place in 1938-39 with exports of \$402,700,000, and the United States, to which exports amounted to \$375,900,000, again purchased more than any other individual country. The continents of Europe and North America, including the great consuming markets of the United Kingdom and the United States, accounted together for 86.8 per cent of Canada's exports in 1938-39 compared with 87.3 per cent in the previous year. The remaining 13 per cent was distributed principally between Asia and Oceania, the former taking as much and the latter more than South America and Africa combined.

The following statement on "Imports from Forty Leading Countries" shows how predominant the two great English-speaking countries are as a source of Canadian imports. The United States supplied 62.7 per cent of the Dominion's imports in 1938-39, while the United Kingdom, although having about one-third of the United States' share in Canada's imports, had, nevertheless, almost ten times as large a share as British Straits Settlements, which ranks third. The countries shown in the table account for about 99 per cent of total imports in each year.

The following table shows "Canada's Domestic Exports to Forty Leading Countries". The countries shown account for over 98 per cent of total domestic exports in each year. The United States and United Kingdom rank first and second respectively as export markets, the United States being first in the last five fiscal years, while the United Kingdom was first in 1933-34. Statistics of Canadian exports, by countries, should be read with the qualification that all the goods shown as exported to some countries may not finally be consumed in those countries, while on the other hand other countries may ultimately buy and use more Canadian goods than the Canadian export statistics indicate. For example, exports to the United Kingdom are known to include large amounts of wheat and other grains shipped "on order". The final destination is not known at the time of exportation from Canada. Similarly, considerable quantities of Canadian exports are consigned to one or other of the great European free ports and thence transhipped to the country of consumption. Since the country of final destination in these cases is not known at the time when the goods leave Canada, even to the owners, exports to such countries as the United Kingdom, Belgium, Netherlands, etc., which carry on a large entrepot trade, are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries such as Norway, Switzerland, Czechoslovakia, etc., which obtain Canadian goods indirectly, would be correspondingly higher than the Canadian export statistics indicate.

The share of the United Kingdom and the United States in Canada's export trade declined to 75.7 per cent in 1938-39 from 80.6 per cent in the previous fiscal year. Australia, which purchased Canadian goods valued at \$33,000,000, came third in importance among the countries to which Canada exported. Exports to Australia increased over the previous fiscal year, and exports to New Zealand, valued at \$17,000,000, also advanced over 1937-38.

## CANADA'S MERCHANDISE TRADE BALANCE, 1938-39

Canada's visible balance of trade was more favourable in the fiscal year 1938-39 than in 1937-38, amounting to \$311,542,000, as compared with \$285,751,000. The figures include shipments out of Canada of non-monetary gold. Although there was an increase in the amount of gold sold abroad and held under earmark in Canada this does not appear in the balance of trade since the gold is still retained within Canadian territory. A further explanation of this point will be found on page 44 of this report.

It should also be noted that the decline in exports was almost entirely due to lower prices in 1938-39 than in the previous year. The decline in prices of export commodities was substantially greater than obtained for import commodities. Had there been no change in prices the balance of trade would have been even more favourable than was actually the case.

The following table shows Canada's visible trade balances by continents and leading countries. It will be noted that there was an unfavourable balance with North and South America and a favourable balance with all other continents.

## TRADE OF CANADA WITH THE UNITED KINGDOM, 1938-39

Trade of Canada with the United Kingdom declined relatively less during the depression, and recovery began somewhat sooner than was the case with trade with most other areas. However, the upward trend of Canada's trade with the United Kingdom which was apparent since 1934-35 was not continued in the fiscal year 1938-39. Evidencing the effects of world recession, lower prices, and in particular a small grain harvest, both import and export trade with the United Kingdom registered lower values in 1938-39 than in the previous year.

Table 2 on page 60 of this report gives a summary of Canada's trade with the United Kingdom over a long series of years. It will be noted from the table below that while the declines in both imports and exports were common to each month, the declines in the last month were less drastic than in the others.

Imports of goods free of duty constituted the same proportion of the total in the last two fiscal years, namely, 53.6 per cent. During recent years there has been a constant increase in the ratio of free imports to total imports. In 1936-37, 53.4 per cent of imports were free; in 1935-36, 52.5 per cent; in 1934-35, 47.3 per cent; and in 1933-34, only 45.7 per cent.

Duty collected on imports from the United Kingdom amounted to \$13,568,000 in 1938-39, as compared with \$16,081,000 in 1937-38. The average ad valorem rate of duty (i.e. the amount of duty expressed as a percentage of the value of imports) amounted to 11.7 per cent. With the exception of the previous year, when the rate was 11.1 per cent, this was lower than in any year in the present century and compares with a high of 21.9 per cent in the fiscal year 1931-32.

Canadian statistics of exports to United Kingdom, however, give an exaggerated picture of that part of the Empire as a consumer of Canadian goods. This matter is discussed in the following section on the discrepancies between Canadian and United Kingdom statistics.

**Discrepancy between Canada and United Kingdom Trade Statistics.**—The United Kingdom values its exports “at the cost to the purchaser abroad, including packing and all other relative charges, up to the time of their delivery on board the exporting vessel”. Canada values its imports at “The fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada. . . .” Obviously these two different methods of valuing the same merchandise should lead to a higher total value for United Kingdom exports than for Canadian imports. The difference theoretically should reflect the costs of packing, transportation to seaport, and loading on the exporting vessel. The trade reports, however, do not show this relationship, as may be seen from the following table:—

UNITED KINGDOM'S TOTAL EXPORTS TO CANADA CONTRASTED WITH CANADA'S IMPORTS FROM THE UNITED KINGDOM, 1929-1938

(Calendar Years)

Calendar Years	Total Exports United Kingdom to Canada	Imports into Canada from United Kingdom	Discrepancy (Canadian Values Higher)
	\$	\$	\$
1929.....	182,551,454	194,777,650	12,226,196
1930.....	152,063,866	162,632,466	10,568,600
1931.....	107,801,746	108,468,081	666,335
1932.....	84,610,265	93,508,143	8,897,878
1933.....	90,301,363	97,878,232	7,576,839
1934.....	102,755,874	113,415,984	10,660,110
1935.....	111,136,303	115,447,794	4,311,491
1936.....	121,029,113	122,444,369	1,415,256
1937.....	142,319,834	147,052,164	4,732,330
1938.....	110,782,365	119,165,181	8,382,816

Note.—1929-1934 value of exports from the United Kingdom converted into Canadian currency at par exchange of, \$4.8666; thereafter at average annual rates, as follows: 1935, \$4.9264; 1936, \$4.975; 1937, \$4.94; 1938, \$4.9166. Canadian figures are total imports from the United Kingdom less gold and silver bullion, etc.

It is clear that influences other than methods of valuation are operative. An examination of the item Tea suggests that shipment through the United States distorts the trade figures. The following tables are illustrative:—

—	1937		1938	
	Lbs.	\$	Lbs.	\$
Imports into Canada from United Kingdom.....	11,410,421	3,312,396	9,790,537	2,864,671
Exports from United Kingdom to Canada.....	4,385,810	1,379,663	3,950,704	1,222,232
Imports into United States from United Kingdom...	9,412,546	3,088,212	2,688,575	.....
Exports from United Kingdom to United States.....	15,531,450	5,087,908	13,083,247	4,146,183

It appears that considerable quantities of tea consigned to the United States from the United Kingdom eventually reach Canada where it is credited to the United Kingdom because it was not technically entered for use in the United States but passed through that country in bond. On a smaller scale the same situation seems to exist in the case of coffee and other items for which Canada reports larger quantities imported than the United Kingdom shows as exported to Canada.

Differences arise also from the fact that some items appearing in the Canadian trade statistics are not recorded at all by the United Kingdom. For example:—

—	1937	1938
	\$	\$
Incidental purchases in the United Kingdom by Canadian visitors.....	684,346	583,121
Post Office parcels and packages.....	219,609	182,149

In earlier years an important source of discrepancy was the fact that the Canadian valuation of spirits included the British excise tax. Since April, 1935, however, this has not been effective.

It should be noted that any product entering a bonded warehouse and remaining there over the end of a statistical period will cause a discrepancy unless the amount entered and withdrawn in that statistical period happen to be equal. This is due to the fact that merchandise is not recorded as an import into Canada until it is released for use. Products such as tea, coffee, tobacco, wool, cotton, coal, and liquors, are important in this category. Inasmuch as tea has already been referred to, it is interesting to note that the values of tea remaining in bonded warehouses at the end of the fiscal years 1935, 1936 and 1937 were, respectively, \$2,989,306; \$4,196,959; \$7,021,183. In other words, more tea actually entered the country during the latter two years than was entered for consumption.

The United Kingdom values its imports on the basis of the cost landed at a seaport. Canada values its exports at the actual cost or value at the time of exportation at the points whence consigned for export. The United Kingdom values, therefore, should be higher by the amount of all costs incurred from the point of consignment in Canada to the dock in the United Kingdom port. Again, however, the trade statistics do not always show the expected relationship.

UNITED KINGDOM'S IMPORTS FROM CANADA CONTRASTED WITH CANADA'S  
EXPORTS TO THE UNITED KINGDOM, 1935 TO 1938  
(Calendar Years)

Calendar Years	Imports into United Kingdom from Canada	Exports from Canada to United Kingdom	Discrepancy
	\$	\$	\$
1935.....	275,929,635	302,066,638	(a) 26,137,003
1936.....	373,762,546	394,385,218	(a) 20,622,672
1937.....	438,917,311	400,336,935	(b) 38,580,376
1938.....	386,269,919	338,858,733	(b) 47,411,186

(a) Canadian Value Higher.

(b) United Kingdom Value Higher.

NOTE.—Value of Imports into United Kingdom converted into Canadian Currency at average annual rates, as follows: 1935, \$4-9264; 1936, \$4-975; 1937, \$4-94; 1938, \$4-9166.

The discrepancy appearing in the years 1935 and 1936, Canadian value the higher, was common in earlier years as well. This was due largely to the fact that considerable quantities of wheat consigned from Canada to the United Kingdom never actually reached that destination. They appeared in the trade reports, however, as exports to the United Kingdom. Wheat, so consigned may have been diverted while passing through the United States for use in that country; or may have been diverted to some other country while in transit. In 1937 the "true" type of discrepancy appears because Canada's exports of wheat to the United Kingdom were unusually small, and in contrast to other years the value of wheat diverted from the declared destination (United Kingdom) was not sufficient to offset the difference between the United Kingdom c.i.f. import valuation and the Canadian f.o.b. export valuations.

For the calendar year 1937 Canada showed exports of wheat to the United Kingdom as 73,927,157 bushels, valued at \$95,794,483. The United Kingdom reported imports from Canada as 63,946,747 bushels, valued at \$94,640,520. In view of the fact that the Canadian statistics are based on the country to which the wheat was originally consigned at the time of export from Canada, they do not show in all cases the country of ultimate destination. Similarly, the United Kingdom figures indicate the countries from which the wheat was consigned to the United Kingdom. It sometimes happens that they include American wheat shipped through Canadian ports which, of course, was not recorded in the Canadian statistics as an export. In 1937 this amounted to approximately 4,000,000 bushels. Other grains are also similarly treated.

A correct statement of the wheat movement in 1937 would be:—

Exports from Canada to the United Kingdom . . .	59,840,534 bushels; \$77,541,095
Imports into United Kingdom from Canada . . . . .	59,840,534 " \$88,563,990

The figure of 59,840,534 bushels is secured from reports of the Board of Grain Commissioners and is based upon accurate information as to the ultimate destination of Canadian wheat shipments. The values above are based on the differing average unit prices.

After correction for this factor the total trade in 1937 would appear as follows:—

Exports from Canada to the United Kingdom . . . . .	\$382,083,547
Imports into the United Kingdom from Canada . . . . .	\$432,840,781
Excess of United Kingdom Imports . . . . .	\$50,757,234

Unfortunately it is impossible at this time to present an estimate of the transportation and other costs involved in the United Kingdom c.i.f. valuation. However, the scanty evidence that is available suggests that a very large portion of the corrected discrepancy may thus be explained.

The same method may be followed to explain the discrepancy in 1938, particularly since exports of Canadian wheat remained relatively small. An additional factor enters, however, due to the fact that in April of that year wheat being shipped through United States ports was considered as consigned to the United States rather than, as formerly was the custom, to the United Kingdom. Consequently the correction for wheat diverted from the United Kingdom will hereafter be smaller. In any case it is advisable to accept the reports of the Board of Grain Commissioners on ultimate destination of Canadian wheat shipments.

Time lag, which is present when the period between export and import includes the end of the calendar year, may also give rise to discrepancies. It is particularly important, of course, if there is a heavy seasonal movement of a commodity near the year-end and if the volume of that movement varies considerably from year to year.

There is a normal delay in the report of exports due to the fact that the Department of National Revenue closes its books on the last day of every month except March (the fiscal year end). Thus, merchandise exported in the last few days of the calendar year 1937 may be credited to the calendar year 1938. Obviously this type of delay serves to lessen international discrepancies. Abnormal delays to which the reports to the Department of National Revenue are infrequently subject may cause serious differences, the reason for which is impossible of detection from a study of the statistics alone.

All these factors, then, and others, including the arbitrary valuation of imports for duty purposes, the valuation of goods imported or exported on a consignment basis (apples, for example), and arbitrary exchange conversion rates, give rise to apparent discrepancies between the trade statistics of any two countries.

**Principal Imports into Canada from the United Kingdom, 1938-39.**—The decrease in imports from the United Kingdom in 1938-39 as compared with 1937-38 was common to all the main groups, with the single exception of Miscellaneous. Fibres, Textiles and Textile Products was still the largest single main group, though at \$39,469,000 it was down 22.1% from the preceding year. The largest absolute and percentage drop was in Iron and Its Products, which was 36.4 per cent under its previous year's level at \$19,777,000. Agricultural and Vegetable Products at \$15,475,000 declined \$3,000,000 or about one-sixth from the preceding year. Non-Metallic Minerals and their Products stood at \$12,910,000, less than 1.5 per cent under their level of the previous year. These four groups, which constituted 75.8 per cent of total imports from the United Kingdom, are briefly examined below.

In Fibres, Textiles and Textile Products the United Kingdom was Canada's main supplier, exceeding the United States by \$10 million dollars. Canada buys considerably more cotton from the United States than from Great Britain, but the latter furnishes almost the entire supply of imported woollen products as well as much of the Dominion's flax, hemp and jute. Among the principal items of wool and its products, which regularly constitutes half of our imports in this main group from the United Kingdom, are worsteds and serges (\$5,410,000); worsted tops (\$4,170,000), and woollen yarns (\$2,222,000). Imports of cotton and its products were valued at \$9,259,000, the main item being cotton yarn at \$2,101,000.

Almost \$15 million dollars worth, more than three quarters by value of the imports of iron and its products, were in the semi-finished forms of rolling mill products. Imports of tin plate alone amounted to \$6,092,000. Finished products—machinery, hardware, engines and boilers and farm implements—were imported, this year as hitherto, in smaller amounts.

Under the food section of Agricultural and Vegetable Products imports amounted to \$5,544,000, down 13.1 per cent from 1937-38. Tea constituted more than half of this total at \$2,838,000. Of the Other-than-Food section alcoholic beverages amounted to \$5 million out of a total of \$10 millions, declining 7.3 per cent. Peanut oil, crude, constituted half of the remainder by value of the Other-than-Food division.

The largest items of imports from the United Kingdom under Non-Metallic Mineral Products is coal, which in the year under review amounted to \$6,656,000 out of a total of \$12,910,000. 95 per cent of the coal was anthracite. Tableware of china was imported to the value of \$3,056,000, down 9.7 per cent. Other items of the group, unset diamonds, glass, china clay, plate glass declined from 1937-38, while window glass increased.

In the remaining groups Wood, Wood Products and Paper stood at \$3,570,000, its largest item being Text Books, at \$427,000. Non-Ferrous Metals fell 22.2 per cent to \$5,656,000. Chemicals stood at \$6,963,000. Acids, nitrate of ammonia, dyeing and tanning materials, fertilizers, paints and varnishes, sodium compounds and soap declining, while explosives and cream of tartar increased considerably. The rise of 9.4 per cent to \$7,616,000 in the Miscellaneous group was largely accounted for by vehicles, n.o.p., and articles for exhibition.

Further details respecting principal imports from the United Kingdom will be found in Table 11 on page 81 of this Report.

**Principal Domestic Exports from Canada to United Kingdom, 1938-39.**—The decrease in Canada's domestic exports to the United Kingdom in 1938-39 as compared with 1937-38 was common to all main groups except "Chemicals" and "Miscellaneous Products". Agricultural and Vegetable Products, Mainly Food, exports of which amounted to \$99,365,000, remained the largest group, although it declined by 36.6 per cent as compared with the previous year. The decline was principally accounted for by smaller exports of wheat, which fell in value from \$89,793,000 to \$46,671,000. The decline in wheat was due mainly to lower prices, but some part of the decline is due also to a change in the statistical practice respecting the destination of exports of wheat. Exports shipped through the United States which in the previous year were shown as going to the United Kingdom when the final destination was unknown,

were recorded in 1938-39 as being shipped to the United States "for furtherance". Also due in large part to lower prices, exports of wheat flour declined from \$13,517,000 to \$8,363,000. Many items in this group showed increases, including apples, other fresh fruits, canned beans, canned tomatoes, pickles and sauces, bran, oats and oatmeal. Nearly one-half the exports of Agricultural and Vegetable Products, Other Than Food, consisted of rubber products, of which the principal single item was rubber boots and shoes. Exports of tobacco declined from \$4,933,000 in 1937-38 to \$4,517,000 in 1938-39, while exports of seeds nearly doubled, increasing from \$271,000 to \$507,000.

Animals and Animal Products were down from \$77,997,000 to \$73,168,000. In this group the largest item is bacon and hams, which accounted for \$29,441,000 of the group total. Cheese at \$11,161,000 held close to the previous year's level, and evaporated milk was up by 13.1 per cent at \$1,687,000.

Exports of Fibres, Textiles and Textile Products stood at \$3,421,000, down 10.0 per cent, with its two main items—silk socks and stockings and artificial silk manufactures—at \$429,000 and \$515,000, respectively.

Among Wood, Wood Products and Paper, the total of which stood at \$37,021,000, planks and boards of Douglas fir stand out as showing an increase to \$9,722,000, though planks and boards of spruce declined to \$5,182,000. Wood pulp at \$2,602,000 was but little more than half of its previous year's value, but newsprint paper rose by more than a million dollars to \$5,783,000.

Exports to the United Kingdom under Iron and Its Products dropped by one-quarter to \$12,617,000. All of its chief sub-divisions—pigs, ingots and billets; scrap iron and steel; farm implements and hardware, showed declines, with the exception of machinery, which rose by 5.4 per cent to \$4,737,000, and wire.

Exports of Non-Ferrous Metal Products were down by \$20,000,000, at \$87,222,000. Aluminium was up by 13.6 per cent, standing at \$12,917,000, but the other important metals were down by the following percentages of decline—brass, 16.8 per cent; copper, 24.5 per cent; lead, 27.9 per cent; nickel, 22.6 per cent; precious metals, 13.8 per cent; and zinc, 28.1 per cent.

Among the small groups of Non-Metallic Minerals, Chemicals, and Miscellaneous Products, the two latter were up by 8.2 per cent and 7.2 per cent, respectively, while the first is down by 16.4 per cent. Asbestos rose 33.8 per cent to \$1,505,000; soap, 22.2 per cent to \$1,216,000; aeroplanes, \$800 to \$247,000.

Further details respecting principal exports to United Kingdom will be found in Table II on page 84 of this report.

### TRADE OF CANADA WITH THE UNITED STATES, 1938-39

The United States is Canada's most valuable external market and most important source of supply. In recent years it has absorbed more than forty per cent of the Dominion's export and has supplied over sixty per cent of all imports into Canada.

Imports into Canada from the United States in 1938-39 were valued at \$412,477,000, as compared with \$487,280,000 in the preceding year, and a depression low of \$232,548,000 in 1932-33. In 1938-39, 39.8 per cent of Canada's imports from the United States were free of duty. This compares with 40.7 per cent in the preceding year. Duty collected on imports from the United States in 1938-39 amounted to \$56,986,000, compared with \$66,276,000 in the fiscal year 1937-38. The average ad valorem rate of duty on dutiable imports (i.e. the amount of duty expressed as a percentage of the value of imports) was about the same as the previous year, being 22.9 per cent as compared with 23.0 per cent.

Domestic exports from Canada were valued at \$375,939,000 in 1938-39, as compared with \$423,131,000 in 1937-38, and with a depression low of \$197,425,000 in 1932-33.

Canada's unfavourable balance of trade with the United States was nearly halved in 1938-39 compared with the preceding fiscal year, amounting to \$25,880,000 as compared with \$52,194,000.

CANADA'S TRADE WITH THE UNITED STATES, BY MONTHS, APRIL-MARCH, 1935-35, 1936-37, 1937-38

**Discrepancies in Trade Statistics—Canada and the United States.**—The United States normally values its exports at “the actual selling price or the value of the merchandise in the port of export at the time of exportation . . . . If the merchandise is produced at an interior place, the freight charges from the interior point of shipment to the seaport or border point of exportation are included in the value”. With respect to exports to Canada, however, only a few items, including coal, are so valued. The remainder are valued as at point of shipment.

Canada values its imports at “the fair market value. . . . in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada”. This statement of methods of valuation suggests that if the freight costs, within the United States, on coal are deducted from the total of American exports the resulting figure should agree with the Canadian statement of imports.

Other adjustments are necessary, however, before any comparisons can be made. To the total imports from the United States, as reported by Canada, should be added those from Alaska, Hawaii and Puerto Rico, inasmuch as the trade of these American possessions are not given separately in the United States Trade Reports. Also, since the United States does not include the exports of raw gold and non-monetary gold and silver bullion in the merchandise total (as Canada does) these should be deducted from Canada's total, or added to the United

# CONDENSED PRELIMINARY TRADE REPORT

27

States total. These adjustments for the calendar year 1936, 1937 and 1938 are shown below. The United States total includes exports of foreign merchandise.

	1936	1937	1938
	\$	\$	\$
Imports into Canada from United States.....	369,141,513	490,504,978	424,754,818
Imports into Canada from Alaska.....	86,784	55,139	101,570
"    "    Hawaii.....	170,726	218,831	145,191
"    "    Puerto Rico.....	36,837	7,578	5,621
Total Imports from United States.....	369,435,860	490,786,526	425,007,200
Less Imports of Non-Monetary Gold and Silver—			
Gold, unmanufactured.....	102,173	66,954	37,151
Silver, bars, blocks, etc.....	1,729,380	524,624	747,490
Exports from United States to Canada.....	367,604,307	490,194,948	424,222,559
United States Value higher by.....	384,150,694	509,315,503	467,661,884
	16,546,387	19,120,555	43,439,325

Adjusting the trade figures of earlier years similarly, a summary statement for the past ten years appears as follows:—

Calendar Years	Exports from United States to Canada	Imports into Canada from United States	Excess Canadian Imports (a) United States Exports (b)
	\$	\$	\$
1929.....	905,065,045	893,149,306	11,915,739 (b)
1930.....	659,094,187	653,509,974	5,584,213 (b)
1931.....	396,355,320	393,678,410	2,676,910 (b)
1932.....	241,351,492	263,146,052	21,794,560 (a)
1933.....	210,651,312	216,611,657	5,960,345 (a)
1934.....	302,433,260	291,823,897	10,609,363 (b)
1935.....	323,193,949	308,583,817	14,610,132 (b)
1936.....	384,150,694	367,604,307	16,546,387 (b)
1937.....	509,315,503	490,195,048	19,120,555 (b)
1938.....	467,661,884	424,222,559	43,439,325 (b)

The constant excesses of United States exports are due mainly to (1) the difference in the methods of valuing coal, and (2) the fact that the United States lists as exports to Canada grains which pass through Canada for export overseas. The following table illustrates these points:—

	1937		1938	
	Tons	\$	Tons	\$
United States Exports of Coal to Canada.....	13,941,123	58,702,177	11,227,685	47,717,662
Canadian Imports of Coal from United States.....	12,976,511	30,601,843	11,273,531	27,329,477
Excess United States Exports.....		28,100,334		20,388,185
	Bushels		Bushels	
United States Exports of Grains to Canada (a).....	19,407,374	18,312,901	85,513,780	51,402,341
Canadian Imports of Grains from United States.....	6,895,525	8,537,238	21,517,319	11,885,239
Excess United States Exports.....		9,775,663		39,517,102
Combined Excess United States Exports.....		37,875,997		59,905,287

(a) Includes Barley, Corn, Oats, Rye and Wheat. The value of United States exports in 1938 was computed from the unit value of exports of each grain to all countries. Direct data were not yet available. The 1938 value of United States exports of Coal, likewise, was computed from the unit value of exports of coal to all countries. These values, therefore, are subject to revision.

The very large discrepancy in the quantity of coal in 1937 is due to the fact that a considerable tonnage, though landed in Canada, was not released for consumption in that year. Correcting for this situation reduces the excess of United States Exports (coal) to approximately \$26,530,779, and the Combined Excess of United States Exports (coal and grains) to \$36,306,442.

In the period from 1930 to 1934 the relatively small excesses of United States exports and the excesses of Canadian imports are due largely to a temporary change in the method of valuation of coal by the United States authorities.

Further differences arise from the fact that some items listed as imports by Canada are not listed as exports by the United States. For example:—

	1937 \$	1938 \$
Incidental purchases in the United States by Canadian visitors.....	6,204,599	8,008,683
Express parcels of small value.....	1,875,899	1,779,550
Post Office parcels and packages.....	2,724,591	2,430,545

In addition, Canada shows a higher valuation of Books and Printed Matter than does the United States. This difference, \$1,681,406 in 1937 (1938 figures not available) probably arises from the shipment of newspapers, magazines, and advertising materials which are not subject to record by the United States authorities.

For the years 1937 and 1938, the discrepancy may, therefore, be corrected as follows:—

	1937 \$	1938 \$
Excess of United States Exports after original adjustments.....	19,120,555	43,439,325
Deduct—Excess Coal Valuation.....	26,530,779	20,388,185
Excess Grain Valuation.....	9,775,663	39,517,102
Excess of Canadian Imports.....	17,185,887	16,465,962
Deduct—Other Items Specified.....	12,486,495	12,218,778
Net excess of Canadian Imports.....	4,699,392	4,247,184

The net excess of Canadian imports may be said to be due to items similar to, but less important than, those already mentioned; to items credited to the United States by virtue of the fact that they pass through that country though not recorded as an export of the United States; to time lag between the recording of exports and the recording of imports; to the setting of arbitrary valuations for duty purposes; to the temporary storage of commodities in bonded warehouses; et cetera.

It is to be understood that some discrepancy may be found in the great majority of items and that the net excess shown above is the resultant of a great number of individual differences, some being excesses of United States exports and some being excesses of Canadian imports.

The United States values its imports at the "market value or the price, at the time of exportation . . . in the principal markets of the country from which exported . . . packed ready for shipment to the United States". Canada values its exports at the "cost or value at the time of exportation at the points in Canada whence consigned for export". In the absence, then, of complications arising from intransit trade, arbitrary customs valuations in the importing country and other factors previously mentioned, the values reported by the two countries should be in substantial agreement.

To compare the trade figures it is necessary, as before, to adjust the Canadian statistics by adding to the exports to the United States those to Alaska, Hawaii and Puerto Rico, and deducting the exports of raw gold, non-monetary gold bullion, jewellers' sweepings and scrap gold, silver ore and silver bullion.

Calendar Years	Imports into United States from Canada	Exports from Canada to United States	Excess Canadian Exports (a) United States Imports (b)
	\$	\$	\$
1929.....	503,496,245	511,754,286	8,258,041 (a)
1930.....	402,350,280	386,307,872	16,042,408 (b)
1931.....	266,268,360	243,244,623	18,023,737 (b)
1932.....	174,100,507	163,804,261	10,296,246 (b)
1933.....	185,408,850	171,068,720	14,340,130 (b)
1934.....	227,253,645	221,852,082	5,401,563 (b)
1935.....	286,444,365	259,079,080	27,365,285 (b)
1936.....	375,831,804	338,507,986	37,323,818 (b)
1937.....	398,309,323	365,558,627	32,750,696 (b)
1938.....	260,273,830	267,556,370	7,282,540 (a)

In earlier years an excess of Canadian exports was due in large part to the fact that Canada exported large quantities of alcoholic beverages to the United States, while the United States recorded no imports of alcoholic beverages from Canada. The excesses of United States imports were due mainly to—

(1) The diversion of Canadian wheat, originally consigned overseas, to use in the United States. This diverted wheat was credited to Canada in the United States trade statistics, but Canada, having no record of the diversions, recorded them as exports to the original destinations.

(2) At times there has been a considerable movement of grains other than wheat through Canadian ports to the United States. These have been credited to Canada in the United States trade statistics but have not, for the most part, entered into the Canadian export statistics.

(3) Bran, shorts and middlings, produced from wheat ground in bond in the United States, are treated as imports into the United States. The wheat imported for grinding in bond appears in the import statistics at market value; the by-products of the grinding also appear in the import statistics when they are withdrawn from the bonded mill. There is, therefore, a duplication in value.

In 1937 these items affected the discrepancy as follows:—

(1) Diverted wheat.....	\$18,279,836
(2) Intransit grains (barley).....	6,618,282
(3) Bran, shorts and middlings.....	3,641,385

A correction must also be made for the item electrical energy which is included in Canadian merchandise exports but not in United States imports. In 1937 this item was valued at \$3,976,052.

The discrepancy remaining after the corrections noted, \$8,187,245, is distributed among a great number of items whose individual differences have not as yet been, or cannot readily be, classified as to types.

Attention is drawn to the fact that the total discrepancy in 1938 (\$7,282,540) is an excess of Canadian exports. In 1938 the Canadian method of reporting exports of wheat was changed, so that Canadian wheat exported through the United States was recorded as exports to the United States for furtherance. At the same time the United States consumed less Canadian wheat than in previous years. The latter condition also reduced the over-valuation of United States imports in respect to the item "Bran, shorts and middlings". Furthermore, United States imports of foreign grains declined almost to the vanishing point.

The change in the statistical treatment of Canadian wheat exports resulted in an apparent excess of exports of wheat in 1938 to the United States, of \$9,500,260. The duplication in value in United States statistics with reference to bran, shorts and middlings was \$526,421. Correcting for these items and for electrical energy (\$4,180,757) results in a discrepancy indicating an excess of United States imports of \$5,872,056.

**Exports to United States in Relation to United States Tariffs:**—Under the Underwood Tariff, which was in force in the United States from October 3, 1913, to May 27, 1921, Canada increased domestic exports to the United States from \$139,725,000 to \$542,323,000 from 1912-13 to 1920-21 while the exports of farm products in 1920-21 totalled \$190,790,000. Under this Tariff 88.4 per cent of Canada's exports to the United States in 1920 was admitted duty free. Under the Emergency Tariff, which was in force from May 27, 1921, to September 21, 1922, and the Fordney-McCumber Tariff, from September 21, 1922, to June 18, 1930, Canada's exports of farm products (chiefly raw materials) from 1920-21 to 1929-30, decreased from \$190,790,000 to \$92,134,000, while under the Hawley-Smoot Tariff which came into force on June 18, 1930, Canada's exports of farm products to the United States show a further decline, the exports amounting to \$6,048,000 in 1932-33. In 1933-34 they had increased to \$28,655,000, in 1934-35 to \$49,294,000 and in 1935-36 to \$61,897,000, being \$30,237,000 less than in 1929-30. A heavy duty was imposed on fish under the Fordney-McCumber and Hawley-Smoot Tariffs, which seriously affected the market in the United States for Canadian fish, while in June, 1932, the United States placed a heavy duty on softwood lumber and copper, which also seriously affected Canada's exports of lumber and copper to the United States.

A Trade Agreement between Canada and the United States, signed on Nov. 15, 1935, became operative as regards tariff reductions on Jan. 1, 1936, and upon exchange of ratifications went into force in its entirety on May 14, 1936. United States negotiations were under a tariff amendment act of June 12, 1934 (Reciprocal Trade Agreements Act) first enacted for three years duration, but extended for another three years by a law of Mar. 1, 1937. The enactment sets 50 p.c. as the maximum reduction that can be made in any rate of duty. Concessions to Canada in the 1935 Agreement were 50 p.c. on 27 items; 25 to 49 p.c. on 32 items; under 25 p.c. or existing rate confirmed on 8 items; continuance of free entry assured on 21 items. There were Canadian tariff reductions on 88 items, modification of some customs valuations and exemption from duty of purchases up to \$100 made by returning Canadian residents, corresponding to a similar provision in the United States tariff. The Agreement exchanged unconditional most-favoured-nation treatment with reservation of Canada's Empire preferences and United States preference granted to Cuba, Philippine Islands and the Panama Canal Zone.

A more comprehensive Trade Agreement, signed Nov. 17, 1938, grants Canada concessions on 202 items or sub-items of the United States tariff, covering 83 p.c. of Canadian sales (dutiable and free) to the United States for the year 1937. On 107 of these items, representing \$76,577,000 (about half the dutiable imports in 1937) the maximum 50 p.c. reduction in duty was obtained. Of the remaining items 58 are accorded reductions in duty ranging from 10 to 50 p.c., 5 are assured continuance of the existing rate and 32 continuance of free entry. All concessions of the 1935 Agreement are retained and where quotas existed they are either increased or the quota limitation entirely removed. Principal Canadian products benefiting are lumber, shingles, horses, cattle, dairy products, hog products, potatoes, fish, certain grains, hay, poultry, pulp and paper, metals, non-metallic minerals, ferro-alloys, and many lines of manufactured goods. Among the benefits accruing to Canada under the reciprocal most-favoured-nation clause are many reductions in United States duty arising out of a United States-United Kingdom Trade Agreement signed on the same day as the Canadian Agreement. Canada's concessions to the United States affect 447 tariff items or sub-items, under which imports for the fiscal year 1937 amounted to about 58 p.c. of the total imports from the United States. Reductions in Canadian duty are made on 283 items or sub-items, and duty is fixed at rates hitherto effective on 146. Canada undertakes to remove a special excise tax of 3 p.c. now levied on these items. The Agreement contains safe-guarding clauses as to quantitative restrictions, customs valuation, variations in rate of exchange, preventing the principal benefit of a concession going to a third country.

The President of the United States formally proclaimed the new Trade Agreement on Nov. 25, 1938. On the day following the President's Proclamation, i.e., Nov. 26, 1938, Article IX of the Agreement became provisionally effective, the result being to exempt Canadian lumber, shingles and telegraph poles shipped to the United States from the necessity of a mark of origin. Duty concessions, except where otherwise stated, became provisionally effective in both countries on Jan. 1, 1939. The Canadian ratifying Act was assented to in Ottawa by His Majesty the King on May 19, 1939. The Agreement is to go fully into force on exchange of ratification by the King and a copy of the President's Proclamation. It is to be effective for three years from the effective date of Article IX and thereafter subject to termination on six months' notice by either party.

## TRADE OF CANADA VIA UNITED STATES

The three following tables show in summary the value of Canada's imports and exports via the United States and principal commodities exported from Canada to overseas countries via the United States and via Canadian sea or river ports. Included with exports shown as being shipped via the United States are substantial amounts of grain, and possibly other commodities, exported from Canada (e.g., from Fort William and Port Arthur) via the United States, which are subsequently re-routed from United States for shipment via Canadian sea or river ports, chiefly Montreal, and to this extent the figures respecting exports via the United States are overstated.

### PROPORTIONS OF TRADE IN RAW AND MANUFACTURED PRODUCTS

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed; a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages of both imports and exports of manufactures on a value basis.

In Canada, grains (chiefly wheat) and in the United States, raw cotton, grains (principally wheat) and raw tobacco are the leading commodities which comprise the bulk of the exports of raw materials. It is of interest to note the results in Canada and the United States when certain staple raw materials of farm origin, which are reproducible annually, are eliminated, such as grains, fresh fruits and vegetables, seeds and raw tobacco, for both countries, and raw cotton for the United States. The results, for the years 1900 to 1938, are set forth in the following table:—

RAW MATERIALS EXPORTED FROM CANADA 1899-1900 TO 1938-39 AND THE UNITED STATES, 1899-1900 TO 1938

(Values in Millions of Dollars)

It will be observed from the statistics in the following table showing "Canada's Imports and Exports by Leading Countries, according to Degree of Manufacture", fiscal year 1938-39, that Canada's imports from those countries with highly developed manufacturing industries consist of manufactured products and her exports to those countries are made up largely of raw and semi-manufactured products; while on the other hand Canada's trade with countries whose industries are not so highly developed consist chiefly, in the case of imports, of raw and semi-manufactured products and in the case of exports, of manufactured products.

## CANADA'S IMPORTS AND EXPORTS BY LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE

### EXPORTS OF GOLD IN CANADIAN STATISTICS

Exports of gold in Canadian trade statistics are distinguished as between monetary and non-monetary. Monetary gold exports are those which entail a reduction in the Dominion's monetary gold stocks. All other gold exports (classed as non-monetary) are shown as merchandise and included with total merchandise exports.

In former times there was a movement of gold from Canada in the form of "Gold-bearing quartz, dust, nuggets, and gold bullion obtained direct from mining operations", and such gold has always been considered as "merchandise". When the Royal Mint in Ottawa began to refine gold, exports formerly shipped as "Gold-bearing quartz, dust, etc.", began to be exported in the form of bullion and were recorded under Coin and Bullion as distinct from Merchandise creating an incomparability with previous figures. Thus, in order to restore comparability with the statistics of previous years, it was considered expedient to adopt the present procedure. It was also felt that gold, like other great export staples, is a product of Canadian resources and industry which in large part is exported independently of domestic monetary considerations and ought not to be excluded from the statistics of exports of Canadian produce. Nor was it felt that gold which bears no relation to the Canadian monetary system should be classed as "money". The change was, accordingly, inaugurated on the 1st of April, 1936, and appropriate revisions made in the trade statistics for previous years back to 1926. Prior to this time no revision was necessary.

At the time it was believed that there would be no re-exports of non-monetary gold, i.e., exports of previously imported gold of a non-monetary character. No provision was made, therefore, for this distinction with respect to exports of foreign products. However, it was found, as will be indicated below, that in order to faithfully represent the facts and logically to adhere to the policy laid down, the distinction was necessary for foreign exports as well as domestic exports, and, accordingly, that has been done since the 1st of April, 1938.

The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined almost exclusively by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. For these reasons it is frequently desired to view movements of trade in commercial commodities—strictly speaking—alone. Accordingly, provision is now made in the trade reports for a supplementary table showing exports from Canada excluding all gold. Such tables are given below.

Another complicating factor is that the nationality of gold does not affect its value as an export asset, and, therefore, domestic and foreign gold are mutually substitutable. It is doubtless correct to treat new gold based on current production as a commodity of mineral origin and so classify it in export statistics, but it may happen that foreign (i.e. previously imported) gold may also be exported without reducing monetary stocks. These facts are now recorded in the trade statistics but will only show up in their entirety by reference to both domestic exports and exports of foreign produce. The statistics in this connection are somewhat complicated, since they represent complicated facts.

Finally, gold does not move in international trade in any direct or normal relation to sales and purchases. It may be bought or sold abroad without moving in or out across the frontier. Trade statistics deal only with physical movements, sales or purchases of gold which do not involve an actual movement being more properly regarded as an "invisible item" and taken care of in the "International Balance of Payments" statements. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics. Additions to the stock from imports are taken account of when the gold in question enters Canada, not when it is added to earmark. Similarly, domestic gold added to earmark stock, although sold abroad, does not appear in export statistics because it remains in Canada. In view, however, of the relation to external trade, statistics respecting holdings of earmark gold are given on the following page.

## TRADE OF CANADA COMPARED WITH WORLD TRADE

The continued rise which world trade had shown throughout the years 1935 to 1937 was replaced in 1938 by a definite decline. While the total for the year remained above 1936 it was considerably below 1937. The figures of practically every country reflect the fall. According to a calculation of the League of Nations the gold value of the international trade of 76 countries which had risen to 46.3 per cent of its 1929 level by 1937, fell back to 40.2 per cent in 1938. To this decline both volume and price contributed. The index of volume in terms of 1929 fell to 88.6 per cent in 1938, after reaching 96.2 per cent in the previous year, while a similar index of price fell to 45.4 per cent from 48.1 per cent.

The general picture of world trade is one in which the dominant characteristics remain hazy and indistinct. European trade policies, in particular, continue to be subordinated to political and non-commercial factors. Although several advances were made in the actual removal or reduction of restrictions on world commerce, in general, trade barriers remain high.

The statistics in the table below indicate how widespread was the downward movement of trade in 1938 compared with 1937. No country of the twenty-six listed showed an increase in both imports and exports; only two increased their imports and four increased their exports. In both imports and exports Canada shows a slightly greater decrease than the total for the twenty-six countries in the table.

NET IMPORTS AND DOMESTIC EXPORTS OF TWENTY-SEVEN COUNTRIES, WITH PERCENTAGE INCREASE OR DECREASE, 1938 COMPARED WITH 1937

Countries	Net Imports		Domestic Exports		Percentage of Increase (+) or Decrease (-) 1938 compared with 1937	
	1937	1938	1937	1938	Imports	Exports
	(In Millions of Canadian Dollars)				%	%

**Canada's Position in World Trade:**—It will be seen from statistics in the following table that Canada maintained its rank among the leading trading nations as the world's fourth exporting country and eighth in respect to imports. In total trade Canada moved from sixth to fifth position, supplanting Japan.

### Production and Export, by Countries, of Canada's Principal Export Commodities:—

The trade of Canada is, of course, partly the result of the necessity to procure abroad those commodities which are lacking in Canada or which domestic industry does not supply in sufficient quantity; but perhaps in even greater measure it derives from the Dominion's great wealth of natural resources and productive capacity, which can only be most profitably exploited through wide participation in external markets.

In the production of many important commodities Canada ranks high among the countries of the world. The Dominion is first in the production of asbestos, nickel and newsprint, supplying normally over half the world's asbestos, over eighty per cent of the world's nickel, almost as much newsprint as the next four countries combined. In the production of zinc metal Canada was fourth in 1938, though in zinc ore she was probably not far below Australia, which was second only to the United States. In lead and automobiles Canada was fourth and sixth respectively, in copper and gold she was third, in wheat fifth.

Canada was first among the countries of the world during 1938 in exports of newsprint paper, wheat, nickel and asbestos; third in wheat flour and rubber tires; fourth in automobiles and wood pulp. The Dominion also ranks high among the world's exporters of many other products, including lumber and timber, fish, copper, barley, cheese, raw furs, whiskey, meats, farm implements, cattle, gold, silver, rye, oats, rubber footwear, leather and hides.

## HISTORICAL SUMMARY OF CANADA'S TRADE BY DECADES

(Fiscal Years 1889-90 to 1929-30 and 1938-39)

The statements which follow show the long term trend of Canada's imports and exports by commodities and countries in the fiscal years 1890, 1900, 1910, 1920, 1930 and 1939. In the interpretation of trends it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889; 52.1 in 1899; 59.5 in 1909; 134.0 in 1919; 95.6 in 1929; and 78.6 in 1938. These calendar years approximate the fiscal years shown in the tables following. The fiscal year 1910 was influenced by the general development boom in Western Canada; 1920 was affected by the feverish activity which immediately followed the war; 1930 represented the end of the security inflation period and the beginning of the downturn; while in 1936-37 recovery from the depth of the depression was well established, although world trade in general remained sluggish compared with internal recovery in many countries.

During the period of 49 years covered by the statement below, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus, in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus and aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000, but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products and meats, have become relatively less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century many of the leading imports are now raw materials required by Canadian industries.

Over the period of 49 years covered by this statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas and fisheries. Of the six leading exports in 1939, five were unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, lead, aluminium and platinum. Furthermore, expansion in the gold-mining industry has kept pace with that of the aforementioned metals and exports of Non-Ferrous Metals now constitute the largest group in Canada's export trade.

## SUMMARY OF CANADA'S IMPORTS BY PRINCIPAL COUNTRIES

(Fiscal Years 1889-90, 1899-1900, 1909-10, 1919-20, 1929-30, 1938-39)

## PREFACE

Most of the features of previous issues of the Condensed Preliminary Trade Report are continued in the present number, although considerable difficulty was experienced in obtaining trustworthy figures respecting world trade owing to the unsettled political conditions and the outbreak of war. In the present Report the statistics refer in the main to the calendar year instead of the fiscal year, as in previous issues.

In the first section the external trade of Canada is examined from several angles and the outstanding features are set out in both text and tabular form.

All tables have been revised and expanded to meet altered conditions of trade. Throughout the Report the figures for the calendar year 1939 are unrevised; those for earlier years are final.

The Statistical Record section of the Report was prepared in the External Trade Branch of the Dominion Bureau of Statistics, while the Review section was prepared under the direction of Mr. A. L. Neal, B.A., B.Sc. (econ.), Director of Economic Research, who undertook also the general editorial supervision.

R. H. COATS,

*Dominion Statistician.*

DOMINION BUREAU OF STATISTICS,  
OTTAWA, July 30, 1940.

## REVIEW OF CANADA'S FOREIGN TRADE, 1939

The upward movement in Canada's trade, interrupted in 1938, was re-established in 1939. Imports increased by 10.9 per cent to \$751,056,000. Domestic exports gained 10.4 per cent, being valued at \$924,926,000, as compared with \$837,584,000 in the previous year. In the case of both imports and exports declines were recorded in the first four months of 1939 as compared with the corresponding months in 1938, but the vigorous upward surge in the trade of the later months was sufficient to raise the year's total as indicated above.

Although the declared values of both imports and exports remained somewhat below the high level attained in 1937, this was due entirely to lower prices rather than to smaller volume. In volume or quantity, imports and exports in 1939 reached new high post-depression levels.

Due to the greater expansion in imports the large favourable balance of trade on merchandise account, which in 1938 amounted to \$171,233,000, advanced to \$184,866,000 in 1939. Gross revenue collected on imports increased from \$92,297,000 to \$103,283,000. This rise of 11.9 per cent was somewhat greater than the rise in the value of imports, and the average ad valorem rate of duty (i.e., the amount collected expressed as a percentage of the value of imports), was accordingly higher than in the preceding year. The percentage of imports which were free of duty stood at 43.1 per cent in 1939 and 44.1 per cent in 1938.

# COMPARISON OF VALUE AND VOLUME OF CANADA'S TRADE, 1936 TO 1939

It is important to bear in mind when comparing trade over different periods that changes in value are not necessarily a measure of changes in the quantity or volume of merchandise involved. Changes in the values of imports and exports over a period may be caused either by variations in quantity, by fluctuations in price, or by a combination of those factors.

The table which follows sets forth the results of a compilation in which the factor of price change has been eliminated, and the variations in both the volume and the declared value of trade over the period, 1936-1939, inclusive, is compared. In order to eliminate the influence of price changes, the values of trade in each of the last three years were re-computed by applying to the quantities of each important item of import and export unit values ascertained for the base year 1936.

The declared value of imports in 1939 amounted to \$751,056,000, as compared with \$677,451,000 in 1938. The increase of 10.9 per cent was more than accounted for by the larger quantity of goods imported since the average of prices declined slightly. If the price level of 1936 had prevailed in both 1938 and 1939 imports in those years would have amounted to \$692,871,000 and \$769,114,000, respectively, representing a gain for 1939 of 11.0 per cent, which is not substantially different from the gain actually shown.

It will be noted that all the main groups of imports showed increases in declared value and in quantity in 1939 over 1938. Five of the nine main groups registered declines in unit values or prices. The price gains in "Fibres and Textiles" and "Iron and Products" were insignificant, while the somewhat greater gains in "Non-Ferrous Metals" and "Chemicals" were offset by the declines, leaving the total virtually unchanged.

Exports also increased in 1939 over 1938 in both value and volume. The declared value of exports in 1939 amounted to \$924,926,000, as compared with \$837,584,000 in 1938. Had there been no fall in prices over the period the increase would have been substantially greater on the basis of the price level prevailing in 1936. Exports would have been valued at \$941,384,000 in 1939, as compared with \$810,954,000 in 1938, computed on the same basis. As was the case in imports, all main groups contributed to the increase in both quantity and declared value. On the other hand, all main groups but one showed declines in average export valuations or prices while the increase in the remaining group—Non-Metallic Minerals and Products—was less than 2 per cent.

It may also be noted that the "Barter Terms of Trade" were less favourable to Canada in 1939 than in 1938. This resulted from the fact that the average unit values or prices of exports declined more than the unit values of imports. The index of the unit value of exports on the base year 1936 stood at 98.2 in 1939, as compared with 103.2 in the preceding year, while imports on the same basis remained practically unchanged, falling by only two-tenths of a point. Expressed differently it may be said that assuming it took 100 units of exports to pay for 100 units of imports in 1938, the same 100 units of exports could command only 95.4 units of imports in 1939.

## PRINCIPAL IMPORTS INTO CANADA, 1939

Imports into Canada during the calendar year 1939 showed considerable increase over the preceding year. This increase applies to all of the nine main groups, though Agricultural and Vegetable Products and Wood Products, rose by small amounts. The largest group, Iron and Its Products, showed the greatest rise in value, from \$162,554,000 in 1938 to \$183,160,000. The largest percentage increase was in Animals and Animal Products, which gained 30 per cent, at \$32,758,000.

The various sub-groups of Iron and Its Products did not behave uniformly. Iron ore was very considerably up (1,765,000 tons in 1939 against 1,302,000 tons in 1938) as might be expected from the greater industrial activity in Canada during the past year; imports of iron ore have followed closely the curve of general business in Canada during recent years. This applies also

to scrap iron and steel, which almost doubled in quantity and more than doubled in value in 1939 over 1938. On the other hand, many of the products of more advanced manufacture did not increase at all, or increased by negligible amounts: among these were farm implements, engines and boilers, hardware and cutlery, electric stoves and furnaces. Significance attaches to imports of machinery as an indication of business activity. Such types as logging equipment, metal-working machinery, mining machinery and paper machinery showed amounts considerably greater than 1938, while imports of machinery for the textile industry maintained the high level (over \$4,000,000) of the previous year.

In Animals and Animal Products there were increases in raw furs, hides and skins (at \$6,173,000, double their 1938 value) unmanufactured leather, and canned meats. Fresh pork imports rose from \$48,000 to \$2,464,000.

Fibres, Textiles and Textile Products were up \$13,000,000 to slightly over \$100,000,000. Unprocessed items in this group contributed a larger proportionate share to the increase than other items. Raw cotton was up \$3½ million, raw silk, \$2 million. The main finished textile goods showed lesser increases. Mixed textile products, which includes fishing lines, gloves, hats and caps, oilcloth, etc., only rose from \$10,115,000 to \$10,676,000, and most of this was due to rags and waste. The increase of raw products as compared with finished goods, which seems to run through many branches of Canadian imports for the calendar year just past, is probably due to two causes,—the increase in demand on the part of producers due to increased domestic business activity and the increased prices of many raw materials as compared with finished goods.

Non-Metallic Minerals and Their Products was the second largest group of imports. Coal ordinarily comprises almost one-third of this group, with anthracite somewhat in excess of bituminous, and in 1939 was \$6,000,000 in excess of 1938. Contrary to the general tendency for values of raw materials to show an increase over 1938, crude petroleum at less than \$40,000,000 was a million and a half dollars less than in the previous year, though in quantity it showed a slight increase.

Increases of considerable amount were shown in compounds of tetraethyl lead, medicinal preparations, aniline and coal tar dyes, sodium compounds, explosives, and paints and varnishes in the Chemical group. In the Miscellaneous group imports under the \$100 tourist exemption privilege were somewhat higher, at \$9,487,000. Imports of phonographs and photographic films decreased. In Wood, Wood Products and Paper a very slight decrease was shown in books and printed matter, which at \$15,152,000 constituted nearly one-half of the group. Tin and aluminium, the principal non-ferrous metals (ores of which are not found in Canada), both increased over the previous year, the former by more than half a million dollars and the latter by more than a million.

Percentage represented by above Commodities.....				79.0%				

**Imports for Canadian Industry.**—Canada, like other manufacturing countries, is dependent on imports in large measure for its supply of numerous raw materials, such as petroleum, oils, coal, raw cotton, rubber, raw silk, sisal fibre, iron ore, bauxite, sulphur, manganese oxide, etc. Also, Canadian industry in its present state of development needs to import many processed articles for further finishing in Canada. The table below shows the imports into Canada of seventy commodities for Canadian industry. The list is not exhaustive but it represents, nonetheless, 33.7 per cent of total imports in 1939, or \$253,404,386.

## CANADA'S IMPORTS OF SEVENTY LEADING COMMODITIES FOR CANADIAN INDUSTRIES

(Calendar Year 1939 compared with 1938)

## PRINCIPAL EXPORTS FROM CANADA, 1939

Total exports of Canadian produce showed an increase in value of 10.4 per cent in the calendar year 1939 over the previous year, standing at the figure of \$925 million. All the main groups reflected the increase except Miscellaneous Commodities. Agricultural and Vegetable Products, and Wood, Wood Products and Paper each rose by some \$30 million. These are ordinarily the two largest groups, and in 1939 they together comprised one-half of the total exports by value.

In the Wood group more than one-half of the increase over the previous year was in un-manufactured wood, which accounts for only one-third of the total value of the group. Hemlock logs, and planks and boards of hemlock, spruce, and pine showed particularly large increases both in value and quantity. Red cedar shingles, at nearly \$8 million, were up by more than \$3 million. In accordance with the tendency of the past few years pulpwood fell some 12.8 per cent to less than \$12 million, and manufactured wood, of which the main item is chemical pulp, rose very little. Newsprint paper rose \$11 million to \$115,686,000. In the past few years exports of wood pulp have declined greatly, which is in contrast to newsprint paper.

Of the increase of \$25,000,000 in the "Mainly Food" section of Agricultural and Vegetable Products, some \$20 million is due to expansion in the exports of wheat. This is entirely due to increase in quantity since the average price was below the 1938 level. Exports of fruits declined, largely because of smaller shipments of fresh apples which fell nearly \$4 million. Exports of vegetables rose, the principal item involved being canned tomatoes which at \$5,755,000 was two and a half times its 1938 value. Wheat flour and barley, respectively the second and third most important items in grains and products, fell somewhat in value as compared with the previous year, though wheat flour rose more than one third in quantity.

In the "Other than Food" section of Agricultural and Vegetable Products, whiskey exports fell by almost \$3 million from the figure of well over \$10 million attained in 1938, but this was more than counterbalanced by a doubling of exports of leaf tobacco both in quantity and value. Rubber boots and shoes at \$4,016,000 were up 14 per cent, mostly due to a rise in price, and tire casings at \$7,374,000 showed a slight increase over the previous year.

Next in value of exports to the two groups discussed above, is Non-Ferrous Metal Products. The seven important metals—nickel (\$58,000,000); copper (53,000,000); aluminium (\$26,000,000); lead (\$10,000,000); zinc (\$10,000,000); silver (\$9,000,000); and platinum (\$6,000,000), showed little change in the aggregate as compared with the previous year, the increase of \$5½ million in nickel, and \$1 million in lead being somewhat more than counterbalanced by declines in silver bullion (down \$4 million), and platinum concentrates (down \$3 million).

Non-Metallic Mineral exports were up over the calendar year 1938, reflecting a rise in the value of exports of the chief item, asbestos, from \$13,317,000 to \$15,845,000. Crude artificial abrasives rose some 16.1 per cent to \$4,380,000.

Animals and Animal Products were up 11.6 per cent, at \$131,804,000. The principal item of increase was beef cattle, which rose by \$6 million to \$13,808,000. All of the increase was accounted for by greater sales to the United States, which took 95 per cent of the exports. Fish, meats, milk and products, and furs, all rose slightly.

The Iron group was higher by 5.0 per cent than in the previous year. A very considerable part of the increase was contributed by ferro-manganese and ferro-silicon. Machinery (\$10,-873,000), and vehicles (\$25,950,000), both showed slight rises, while farm implements (\$6,975,000) declined somewhat.

Among the remaining smaller groups, Textiles (\$14,428,000) rose slightly; Chemicals (\$24,263,000) rose considerably due to rises in fertilizers (up \$2,100,000), paints (up \$600,000); and sodium compounds (up \$800,000); and Miscellaneous Commodities fell 16 per cent, to \$16,448,000.

The following table shows exports of eighty-five leading commodities from Canada in 1939, with increase or decrease compared with 1938. The items shown account for over 92 per cent of the total exports. Of the fifty-eight items for which statistics of both quantity and value are available, thirty-nine showed increases in both respects; four showed an increase in quantity and a decline in value; three showed an increase in value and a decline in quantity; while twelve declined in both quantity and value. For twenty-seven items no quantity statistics were available, and of these, fourteen increased in value while thirteen declined.

## DISTRIBUTION OF CANADA'S TRADE BY CONTINENTS AND COUNTRIES

The increase in Canada's imports in 1939 over 1938 did not apply to all continents in equal measure. Europe and South America lost ground, while North America gained substantially. The net result of the changes was to increase even more the predominance of North America as a source of supply to Canada. The United States was responsible for the whole of the increase in imports from North America and supplied 66 per cent of Canada's external purchases in the calendar year 1939. The shares of Asia, Africa, and Oceania all increased by slight margins, and purchases from these continents, combined, equalled but 9 per cent of the total imports.

North America came first also in purchases from Canada. Europe (including the United Kingdom), which has generally led in respect of purchases of Canadian products, this year was exceeded by some \$20,000,000. The United States absorbed 37.9 per cent of the total exports from Canada in 1938, exceeding the United Kingdom which bought 37.2 per cent; but in 1939 the margin of the United States was increased when its share rose to 41.1 per cent, and that of the United Kingdom fell to 35.5. The continents of Europe and North America, dominated by the great markets of the United Kingdom and United States, respectively, together accounted for 86 per cent of Canada's total exports. This was little different from the proportion of the preceding year. The remaining 14 per cent was distributed principally between Asia and Oceania, the former taking as much, and the latter more than South America and Africa combined.

The following statement on "Imports from Forty Leading Countries" shows how predominant the two great English-speaking countries are as a source of Canadian imports. The United States supplied 66.1 per cent of the Dominion's imports in 1939, while the United Kingdom, although having about one quarter of the United States' share in Canada's imports, had, nevertheless, almost ten times as large a share as British Straits Settlements, which since 1937 has ranked third. The countries shown in the table account for about 99 per cent of total imports in each year.

The table below shows "Canada's Domestic Exports to Forty Leading Countries". The countries shown account for over 98 per cent of total domestic exports in each year. The United Kingdom was first in each of the years 1936 to 1938, while the United States was first in 1939.

The share of the United Kingdom and the United States in Canada's export trade rose somewhat in 1939 to 76.6 per cent. Exports to Australia declined slightly to \$32,000,000 but that country maintained its place as third among Canada's customers.

Statistics of Canadian exports, by countries, should be read with the qualification that all the goods shown as exported to some countries may not finally be consumed in those countries, while on the other hand other countries may ultimately buy and use more Canadian goods than the Canadian export statistics indicate. For example, exports to the United Kingdom are known to include large amounts of wheat and other grains shipped "on order". The final destination is not known at the time of exportation from Canada. Similarly, considerable quantities of Canadian exports are consigned to one or other of the great European free ports and thence transhipped to

the country of consumption. Since the country of final destination in these cases is not known at the time when the goods leave Canada, even to the owners, exports to such countries as the United Kingdom, Belgium, Netherlands, etc., which carry on a large entrepot trade, are higher than would be the case if the exports in question were credited to the countries of final consumption. Exports to other countries such as Norway, Switzerland, Czechoslovakia, etc., which obtain Canadian goods indirectly, would be correspondingly higher than the Canadian export statistics indicate.

## CANADA'S MERCHANDISE TRADE BALANCE, 1939

The excess in Canada's exports over imports was greater in 1939 than in the previous year, amounting to \$184,866,000, as compared with \$171,233,000. The figures do not include shipments of gold. A statement on the treatment of gold in Canadian trade statistics will be found on page 43 of this report, and the figures respecting net exports of gold from Canada amounting to \$184,400,000 in 1939, and \$160,500,000 in 1938, are additional to the balance of trade as shown in the ordinary trade statistics.

# CONDENSED PRELIMINARY TRADE REPORT

19

It should be noted that the increase in exports in 1939 over 1938 would have been substantially greater had it not been for a decline in export prices. The price level of imports showed no appreciable decline. Accordingly, had there been no change in prices at all the increase in favourable balance of trade would have been greater than was actually the case.

The following table shows Canada's visible trade balances by continents and leading countries. It will be noted that there was an unfavourable balance with North and South America, and favourable balance with all other countries.

## TRADE OF CANADA WITH THE UNITED KINGDOM, 1939

Trade between Canada and the United Kingdom in both directions declined in 1939 as compared with the previous year. Imports amounted to \$114,000,000, as compared with \$119,000,000 in 1938, while exports were \$329,000,000, as compared with \$341,000,000 in the previous year. These declines were not due to any single outstanding influence but were rather the general net result of a number of factors operating on a comparatively large number of commodities. The outbreak of war naturally caused a sudden dislocation of trade routes, and the immediate effects of this and other extraordinary war influences were manifested in sharp declines of the trade in September, and more particularly October. The first effects, however, were not of long duration, and toward the end of the year longer term influences began to establish themselves.

**Imports into Canada from the United Kingdom.**—Comparing imports into Canada from the United Kingdom for each of the twelve months of 1939 with the corresponding months of 1938, increases and decreases are found to be evenly divided, there being six months above the previous year and six below. The decreases occurred in the first four months of the year and in September and October, the increases in the second four months and the last two. The outstanding decrease was that of 50 per cent in October, the first complete month after the outbreak of hostilities.

With respect to October, outside of Miscellaneous Commodities, which stood at less than one-third of its September value, the greatest relative decrease occurred in Agricultural and Vegetable Products, which fell from \$1,694,000 to \$714,000. Tea was responsible for two-thirds of this drop, being \$663,000 in September, and \$38,000 in October. September imports of tea had been larger than most months, however, and not all of the decline is to be attributed to the war. Imports of tea from the United Kingdom in November were \$165,000, but the imports from all countries rose to over a million dollars, giving the United Kingdom but one-sixth of the Canadian market, instead of its more usual third. This situation may be expected to continue until more normal marketing is established. In the "Other than Food" section of Agricultural and Vegetable Products, whiskey was more than \$150,000 below the preceding month in October, but it subsequently recovered, reaching \$647,000 in December.

Fibres, Textiles, and Textile Products, which is ordinarily the largest group of Canadian imports from the United Kingdom, recorded in September a value of slightly under \$3 million, and in October little more than \$2 million. Cotton at \$705,000 shows a loss of only \$79,000. The bulk of the decrease was accounted for by wool, which dropped to \$834,000 in October—off more than \$700,000 from September. Flax, hemp and jute, and artificial silk decreased by relatively small amounts. Imports of wool made a very rapid recovery and in December amounted to \$1,797,000. For the year as a whole both wool and the entire textile group showed an increase over 1938.

Iron and Its Products accounted for more than \$500,000 of the decline of October below September. Rolling mill products, which is a large part of the group, maintained its position, and the drop was concentrated in engines and boilers (\$251,000 in September, \$17,000 in October), and to a lesser extent in hardware and cutlery, and machinery.

In Miscellaneous Commodities the main item in the large drop was vehicles, n.o.p. Non-Metallic Minerals, and Non-Ferrous Metals both increased in October as compared with September, but for the year as a whole were lower than 1938.

**Exports from Canada to the United Kingdom.**—Exports from Canada to the United Kingdom, like imports, in 1939 were somewhat below 1938, and six of the months showed increases over the corresponding months of the previous year and six decreases. Exports were not as greatly affected at the outbreak of war as were imports, the month of greatest decrease, October, being 30 per cent below the previous October. The regular seasonal rise in the months of October and November in exports to the United Kingdom did not appear in 1939; instead of a rise there was a fall from \$29 million in September to \$25 million in October.

Seven of the nine main groups showed increased exports to the United Kingdom during 1939. In descending order of magnitude of increase they are the Wood, Iron, Chemical, Non-Metallic Mineral, Animal, Miscellaneous, and Textile groups. Remaining are Agricultural and Vegetable Products, and Non-Ferrous Metals and Their Products, which fell by \$13 millions, and \$8 millions, respectively, from 1938. These are the two largest groups, and their fall more than counterbalanced the \$10 millions increase which the seven smaller groups showed.

The decline in Agricultural and Vegetable Products is largely explained by the fall in the price of wheat. Though the amount shipped was actually 700,000 bushels greater than in the previous year, the value was less by \$11.6 millions. Reflecting import restriction in the United Kingdom, fresh apples fell by almost four million dollars, due to decline in volume. On the other hand, canned fruits, vegetables, both fresh and canned, and tobacco leaf all rose considerably. More recently exports of tobacco to the United Kingdom have suffered a decline, and exports of unmanufactured tobacco during the first two months of 1940 were 1,933,000 pounds as compared with 5,949,000 pounds for the corresponding period of the preceding year. In Non-Ferrous Metals over \$3 millions of the decline was due to smaller shipments of platinum concentrates.

In the Wood group the net increase of \$5½ millions was more than accounted for by an increase of \$7 millions in the sub-group of unmanufactured wood. Of this, \$3 millions occurred in planks and boards of Douglas fir, and \$1½ millions in planks and boards of spruce. The main item of decline was chemical wood pulp, which at \$1.8 millions was less than 1938 by nearly \$1½ millions. In Iron and Its Products, farm implements gained over half a million dollars, and machinery \$900,000. Outstanding among increases in the machinery items was typewriters and parts which rose by \$472,000 to \$1,125,000. In the chemical group increases in acids, cobalt oxides, and explosives were partly offset by a decline of \$750,000 in soap, which represented a halving of the volume of this commodity. In Non-Metallic Minerals the increase of \$400,000 was entirely due to asbestos. In Animals and Animal Products, fish, meats and leather were up, while cattle, and furs were considerably down.

To summarize the effects of the war as they have evidenced themselves in Canadian exports to the United Kingdom in recent months, a group of consumer goods,—apples, furs, tobacco, are conspicuous,—declined, and are likely to remain at lower than pre-war levels. Other commodities dropped somewhat in the early months of the war, but have since more than recovered,—thus bacon stood in December, 1939, at \$4,684,000 against \$2,120,000 in December, 1938. Below is a comparison of the first two months of 1940 with the same period in 1939 in some typical Canadian exports to the United Kingdom:—

	January and February	
	1939	1940
	\$	\$
<i>Typical items showing decrease:—</i>		
Fresh apples .....	1,584,229	781,197
Black and silver fox skins .....	2,930,431	425,147
Unmanufactured tobacco .....	1,948,213	597,372
Butter .....	773,309	248
Toilet soap .....	173,896	Nil
<i>Typical items showing increase:—</i>		
Cheese .....	166,513	995,325
Bacon and ham .....	4,611,055	9,537,167
Wheat flour .....	1,204,348	3,548,309
Wheat .....	5,435,965	12,679,110
Veneers and plywoods .....	178,950	455,963
Ferro-silicon .....	11,200	223,884
Cotton duck .....	3,330	205,240

The contrast between large increases in some items and large decreases in others runs through all current trade statistics,—a reflection of abnormal economic circumstances.

## TRADE OF CANADA WITH THE UNITED STATES, 1939

The United States is Canada's most valuable external market and most important source of supply. In recent years it has absorbed more than forty per cent of the Dominion's exports and has supplied over sixty per cent of all imports into Canada.

Imports into Canada from the United States in 1939 were valued at \$496,898,000, as compared with \$424,731,000 in the previous year. In 1939, 39.1 per cent of Canada's imports from the United States were free of duty. This compared with 40.3 per cent in the preceding year.

Domestic exports from Canada were valued at \$380,392,000 in 1939, as compared with \$270,461,000 in the preceding year, an increase of 40.6 per cent.

The balance of trade was reduced from an import balance of \$145,973,000 to \$107,145,000 when account is taken of the exports and re-exports of foreign produce in both years. Throughout 1939 increases in imports were recorded in all but the first four months as compared with the corresponding months of the previous year, while in exports all the months of 1939 increased over those of 1938. Statistics covering Canada's trade with the United States, by months, over the last four years are given in the following table:—

CANADA'S TRADE WITH THE UNITED STATES, BY MONTHS, CALENDAR YEARS

Increases in imports from the United States were common to all the nine main groups with the exception of Agricultural and Vegetable Products, which declined from \$46,963,000 in 1938 to \$45,361,000 in 1939. Domestic exports increased in each main group except Miscellaneous Commodities, which declined slightly less than \$1,000,000 to \$8,339,000. Statistics showing the import and export trade with the United States, by main groups and principal commodities, will be found in Tables 6 and 7 on pages 63 and 75, respectively, of this report.

**Exports to the United States in Relation to United States Tariffs:**—Under the Underwood Tariff, which was in force in the United States from October 3, 1913, to May 27, 1921, Canada increased domestic exports to the United States from \$139,725,000 to \$542,323,000 from 1912-13 to 1920-21 while the exports of farm products in 1920-21 totalled \$190,790,000. Under this Tariff 88.4 per cent of Canada's exports to the United States in 1920 was admitted duty free. Under the Emergency Tariff, which was in force from May 27, 1921, to September 21, 1922, and the Fordney-McCumber Tariff, from September 21, 1922, to June 18, 1930, Canada's exports of farm products (chiefly raw materials) from 1920-21 to 1929-30, decreased from \$190,790,000 to \$92,134,000, while under the Hawley-Smoot Tariff which came into force on June 18, 1930, Canada's exports of farm products to the United States show a further decline, the exports amounting to \$6,048,000 in 1932-33. In 1933-34 they had increased to \$28,655,000, in 1934-35 to \$49,294,000 and in 1935-36 to \$61,897,000, being \$30,237,000 less than in 1929-30. A heavy duty was imposed on fish under the Fordney-McCumber and Hawley-Smoot Tariffs, which seriously affected the market in the United States for Canadian fish, while in June, 1932, the United States placed a heavy duty on softwood lumber and copper, which also seriously affected Canada's exports of lumber and copper to the United States.

A Trade Agreement between Canada and the United States, signed on Nov. 15, 1935, became operative as regards tariff reductions on Jan. 1, 1936, and upon exchange of ratifications went into force in its entirety on May 14, 1936. United States negotiations were under a tariff amendment act of June 12, 1934, (Reciprocal Trade Agreements Act) first enacted for three years duration, but extended for another three years by a law of Mar. 1, 1937. The enactment sets 50 p.c. as the maximum reduction that can be made in any rate of duty. Concessions to Canada in the 1935 Agreement were 50 p.c. on 27 items; 25 to 49 p.c. on 32 items; under 25 p.c. or existing rate confirmed on 8 items; continuance of free entry assured on 21 items. There were Canadian tariff reductions on 88 items, modification of some customs valuations and exemption from duty of purchases up to \$100 made by returning Canadian residents, corresponding to a similar provision in the United States tariff. The Agreement exchanged unconditional most-favoured-nation treatment with reservation of Canada's Empire preferences and United States preference granted to Cuba, Philippine Islands and the Panama Canal Zone.

A more comprehensive Trade Agreement, signed Nov. 17, 1938, grants Canada concessions on 202 items or sub-items of the United States tariff, covering 83 p.c. of Canadian sales (dutiable and free) to the United States for the year 1937. On 107 of these items, representing \$76,577,000 (about half the dutiable imports in 1937) the maximum 50 p.c. reduction in duty was obtained. Of the remaining items 58 are accorded reductions in duty ranging from 10 to 50 p.c., 5 are assured continuance of the existing rate and 32 continuance of free entry. All concessions of the 1935 Agreement are retained and where quotas existed they are either increased or the quota limitation entirely removed. Principal Canadian products benefiting are lumber, shingles, horses, cattle, dairy products, hog products, potatoes, fish, certain grains, hay, poultry, pulp and paper, metals, non-metallic minerals, ferro-alloys, and many lines of manufactured goods. Among the benefits accruing to Canada under the reciprocal most-favoured-nation clause are many reductions in United States duty arising out of a United States-United Kingdom Trade Agreement signed on the same day as the Canadian Agreement. Canada's concessions to the United States affect 447 tariff items or sub-items, under which imports for the fiscal year 1937 amounted to about 58 p.c. of the total imports from the United States. Reductions in Canadian duty are made on 283 items or sub-items, and duty is fixed at rates hitherto effective on 146. Canada undertakes to remove a special excise tax of 3 p.c. now levied on these items. The Agreement contains safe-guarding clauses as to quantitative restrictions, customs valuation, variations in rate of exchange, preventing the principal benefit of a concession going to a third country.

The President of the United States formally proclaimed the new Trade Agreement on Nov. 25, 1938. On the day following the President's Proclamation, i.e., Nov. 26, 1938, Article IX of the Agreement became provisionally effective, the result being to exempt Canadian lumber, shingles and telegraph poles shipped to the United States from the necessity of a mark of origin. Duty concessions, except where otherwise stated, became provisionally effective in both countries on Jan. 1, 1939. The Canadian ratifying Act was assented to in Ottawa by His Majesty the King on May 19, 1939. The Agreement is to go fully into force on exchange of ratification by the King and a copy of the President's Proclamation. It is to be effective for three years from the effective date of Article IX and thereafter subject to termination on six months' notice by either party.

## TRADE OF CANADA VIA UNITED STATES

The three following tables show in summary the value of Canada's imports and exports via the United States and principal commodities exported from Canada to overseas countries via the United States and via Canadian sea or river ports. Included with exports shown as being shipped via the United States are substantial amounts of grain, and possibly other commodities, exported from Canada (e.g., from Fort William and Port Arthur) via the United States, which are subsequently re-routed from United States for shipment via Canadian sea or river ports, chiefly Montreal, and to this extent the figures respecting exports via the United States are overstated.

## DISCREPANCIES IN TRADE STATISTICS

In the following pages will be found a brief investigation of the discrepancies between the trade statistics of Canada and those of other countries covering presumably the same transactions. Most of these discrepancies may be attributed to one or other of the following general causes:—

1. *Differences of Valuation.*—Differences in value as distinct from quantities may arise from the use of different systems of valuations used for recording the trade in different countries.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada. In special cases, however, arbitrary valuations for duty purposes are sometimes employed.

In the export statistics of many countries the f.o.b. declared value of exports is employed. This should roughly correspond to the Canadian system of valuation in imports. Other countries, however, use what is called a commission system of valuation. Under this method, valuations arbitrarily fixed from time to time are applied to the quantity of goods exported and may correspond only in a rough way with the actual market value of the goods in question.

On the export side, Canadian statistics record the actual cost or value at the time of exportation at the points in Canada whence consigned for export. Most European countries, and other countries, use a c.i.f. system of valuation for imports, i.e., the value of the goods including the original cost plus the expense of packing, freight, insurance, commission, and other expenses incidental to importation up to the point of discharge.

2. *Fluctuation in Exchange Rates.*—In recent years the prevalence of exchange controls has added a new disturbing factor to the international comparability of trade statistics. In many countries the values of imports and exports are determined by the application of "official" rates of exchange which may differ substantially from the free or market rates. It is clear that if one country uses a fictitious rate for valuing imports the resulting statistics will differ from the statistics of the exporting country even if the valuation methods are in all other respects identical. Moreover, in comparing the statistics of any two countries it is necessary to express both sets of figures in a single currency. The existence of more than one exchange rate makes this a difficult task and one that is always of doubtful accuracy.

3. *Mis-statement of an Accidental Nature in Export or Import Entries.*—Investigation has shown that for Canada at least these are of negligible importance in the aggregate.

4. *Definitions of Territorial Areas.*—A country may include its colonies in its trade statistics without any separate distinction as the United States does, and other countries may list the various territories separately, Canada for example reporting trade with Alaska, Hawaii, Puerto Rico, separately from that with the United States.

5. *Lapse of Time Between Consignment and Receipt.*—Discrepancy arises between trade statistics of widely separated countries when a shipment from one country is recorded at the end of a given year and does not arrive in the country of import until the following year. The net error is equal to the difference between the overlapping sections of two successive years, and only in the case of an exceptionally large shipment which happened to come at the end of a year would the trade figures be materially affected.

6. *Determination of Source and Destination.*—The most important cause of discrepancy between the statistics of two countries covering the trade between them arises out of difficulties attendant upon the determination of the source of imports and the destination of exports.

Few countries attempt (and those with but qualified success) to credit all imports to their country of origin, i.e., the country in which the goods were actually produced or manufactured. Neither is it possible, in respect to large proportions of international trade, to ascertain or show, at the time of the exportation of goods from the country of production, to what country they will be finally conveyed for consumption. Could these particulars regarding imports and exports be accurately recorded in every case, discrepancies in trade statistics would largely disappear. But most countries, including Canada, record their imports as from the country of consignment, that is, the country with which the actual commercial exchange takes place. While this system fails in many cases to disclose the country of actual origin of the goods, it does more clearly demonstrate the "balance of trade" upon which international financial adjustments are based.

It is evident that systems such as are now followed, in conjunction with the great volume of indirect trade, must result in considerable divergencies in statistics. This is the dominant factor in producing differences between the trade records of Canada and those of European and other overseas countries, for a very large part of Canadian produce finds its way to the country of consumption via a third country.

Canada, like many other countries, attempts to ascertain the country of final destination when goods are exported, but in many cases this is not positively known, even to the owner of the goods. Fluctuations of demand and price may cause diversions of goods from one destination to another while in transit, e.g., Canadian wheat exported "to the United Kingdom" may be re-directed to continental European ports while on the Atlantic, or may be consigned to one of the European free ports and consigned from there to the country of consumption.

Another factor in this origins and destinations problem is that a proportion of exports from Canada to overseas countries is shipped via the United States, and similarly some exports of United States origin find their way to overseas markets in transit through Canada. European countries are inclined to credit the former in their import statistics to United States and the latter to Canada.

An exhaustive study comparing exports of certain commodities with imports of the same commodities into all countries for which statistics were available was carried out by the League of Nations some years ago. It showed, among other things, that Canada's exports of wood pulp and newsprint agreed within close limits with world imports of these commodities from Canada, but that wheat and wheat flour exports were considerably in excess of purchases recorded by other countries from Canada. In wheat there was a corresponding deficiency in United States figures of exports. Though not large enough to account for the entire discrepancy in the Canadian figures, it indicated that part of the Canadian crop proceeding abroad via United States ports is allocated to the United States by the figures of the importing country.

The general conclusions of the survey were that a study of discrepancies had to be carried out commodity by commodity, rather than by countries, since it is as between commodities in the first place rather than between countries that accuracy varies; that it is "doubtful if in many cases countries attempt to enforce the system they claim to apply except in the case of those countries that professedly adopt a mixed system, which in any case must give a confused result"; that "in spite of the great lack of conformity between the imports and exports by countries it is sometimes possible to discover groups of countries whose returns, if taken together as a whole, give results which conform fairly accurately with other groups."

In the following treatment the term "Canadian exports" will be used as meaning "Canadian exports according to Canadian statistics", and "French imports from Canada" will indicate "French imports from Canada according to French statistics".

UNITED KINGDOM figures of imports from Canada often include purchases of United States wheat shipped through Canadian ports, which, of course, are not included in Canadian exports. The United Kingdom figures are also higher by the excess of c.i.f. over f.o.b. valuation. Making for a discrepancy in the opposite direction is the wheat consigned from Canada to the United Kingdom (and so recorded in the Canadian trade statistics), which never actually reaches that destination, being diverted to the United States or to continental Europe while in passage. These factors are of varying relative importance in different years, and, accordingly, in some years United Kingdom imports are higher than Canadian exports, in others lower. Since United Kingdom exports are valued to include transportation to the seaport and loading on the exporting vessel, and Canadian imports from the United Kingdom are "the fair market value" in the markets of the country of exports, it might be expected that United Kingdom exports would be greater than Canadian imports. This is not the case. One reason is that shipments of tea, coffee, and other items to Canada through the United States are incorrectly recorded in the United Kingdom statistics as consigned to the United States and correctly recorded in the Canadian statistics as coming from the United Kingdom. Another is that Canadian trade statistics record incidental purchases by Canadians returning from the United Kingdom, and post office parcels and packages, of which the United Kingdom classification makes no mention.

The UNITED STATES values its imports at the "market value or the price at the time of exportation . . . . in the principal markets of the country from which exported . . . . packed ready for shipment to the United States". This is substantially the valuation used for Canadian exports. Adjustment must be made for the fact that Canada lists Alaska, Hawaii, and Puerto Rico separately from the United States, while the United States statistics treat these colonies as part of the United States. After such adjustment there is in most recent years an excess of United States imports. The largest single cause of this prior to 1938 has been the diversion of Canadian wheat, originally consigned overseas, to use in the United States. Since 1938, however, all wheat proceeding from Canada through the United States has been recorded as exported to the United States for furtherance. Among the many causes of discrepancy are the recording of exports of electrical energy by Canada while this commodity is not recorded as an import by the United States, and an element of duplication in the United States recording of bran, shorts and middlings, where these are the result of grinding in bond. Exports to Canada are valued by the United States as at the point of shipment to Canada. This is not very different from the definition of value used for Canadian import statistics, but the two sets of figures do not agree. Allowance must be made for Alaska, Hawaii and Puerto Rico, as stated above. The United States makes an exception to its general valuation principle for exports to Canada, by including freight to the border in the instance of coal. Further, the United States lists as exports to Canada grains which pass through Canada for export overseas. Grains and coal accounted in 1938 for almost \$60 million of excess of United States exports over Canadian imports. A further source of difference is in incidental purchases by Canadian visitors to the United States, express and post office parcels of small value, and newspapers and magazines, all of which are shown in Canadian imports but not in United States exports. There is a net excess of Canadian imports due to the balance of the above factors.

Canadian exports to IRELAND (EIRE) in 1937, according to Canadian statistics, amounted to \$4,425,000, while Irish imports from Canada for the same year were \$9,413,000, more than twice as much. The Irish excess in 1938, though rather smaller, was still very considerable. The difference runs through most of the items of trade, but wheat alone is responsible for \$3,900,000 in 1937. Part of the underlying cause is the difference between the c.i.f. valuation of the Irish and the Canadian f.o.b. values, but the statement of destinations is the major reason. Much Canadian wheat which ultimately goes to Ireland (Eire) is consigned in the first place to the United Kingdom. As a result the reports of the Board of Grain Commissioners for Canada show very much more Canadian wheat reaching Ireland (Eire) as a final destination than the Canadian export figures give. Irish exports to Canada in 1937 were \$247,000, as against Canadian imports from Ireland of \$47,000. The difference is largely due to wool and its products, which was over \$200,000 in the Irish exports and only \$9,000 in the Canadian imports. A similar situation has existed in most recent years.

FRANCE showed over twice as high a value for imports from Canada in 1937 and 1938 as Canada showed for exports to France. French statistics in 1937 reported 6,284,000 bushels of wheat imported from Canada against Canadian statistics of 853,000 bushels exported to France, and

this difference accounted for most of the discrepancy in total trade in that year. The figures of the table (page 38) constitute evidence that the difference arises not through shipments of United States wheat through Canada, but because wheat consigned elsewhere is diverted to France at some point of its travels after leaving Canada. Silver fox furs are another of the items which appear higher in the French imports than in the Canadian export statistics, probably for the same reason. Imports into Canada from France have been somewhat greater than French exports to Canada in the recent period, though in earlier years the reverse was the case.

Imports into BELGIUM are greater by costs of shipping from the place whence consigned for export in Canada to the point of clearing from customs in Belgium. In 1937 this error was increased by the Canadian statement of exports of wheat being less than the Belgian statement of imports. This was due only in small part to the Belgians crediting the United States with wheat that came ultimately from Canada, being mostly the result of wheat consigned for the United Kingdom being reconsigned to Belgium. In 1938 wheat receipts by Belgium from Canada were almost exactly equal to shipments from Canada to Belgium, and the difference between Canada's total exports to Belgium and Belgian imports from Canada—about 10 per cent of the trade—may be ascribed entirely to extra charges included in the c.i.f. valuation. On trade in the other direction there is agreement to within 4 per cent between the figures of the two countries.

NETHERLANDS figures of imports from Canada were below those of Canadian exports to the Netherlands in 1937 and above in 1938. Wheat, which is the largest single item, shows the opposite discrepancy to trade as a whole in each of the two years. A factor tending to make the Canadian exports of wheat larger than Netherlands imports were the transshipments up the Baltic by lighter and to the inland countries of Europe by barge and rail.

As an example of the above, SWITZERLAND showed imports in 1937 of 2,513,000 bushels of wheat from Canada, while Canadian recorded exports to Switzerland in that year were nil. In 1937 and 1938 exports from Canada to Switzerland were about one-eighth the value of Swiss imports from Canada. Swiss exports and Canadian imports are both based on the value of the goods in Switzerland, and they show a difference of less than 5 per cent in recent years.

In 1937 and 1938 GERMAN imports from Canada were respectively 8 and 11 million dollars greater than Canadian exports to Germany. A considerable part of the difference was the result of German c.i.f. valuation; part also was due to larger receipts of wheat than the Canadian statistics show as exported. The difference in wheat probably arose through diversions to Germany of shipments originally consigned to the United Kingdom. The varying real value of the mark has been a difficulty in comparing German and Canadian trade records.

Exports from Canada to CZECHOSLOVAKIA were more than half a million dollars less than Czechoslovakian imports from Canada in the year 1937, the last for which complete figures are available. The single item of asbestos (in which Czechoslovakian imports from Canada were nil) accounts for more than half the discrepancy. Czechoslovakian exports amounted to some \$3 million less than Canadian imports from Czechoslovakia. The excess of the Canadian figures of the trade in the one direction, and of Czechoslovakian figures in the other, persist without exception through the last ten years, although varying greatly in amount. A careful check carried out with the co-operation of the Czechoslovakian authorities shows that Canadian export statistics agree very closely with direct exports to Czechoslovakia, and that the main discrepancy arises through indirect exports; e.g., in the fiscal year ended March 31, 1938, Canadian recorded exports of copper to Czechoslovakia were 8,790,000 pounds; the investigation showed 9,131,000 pounds shipped direct, and 1,408,000 pounds indirect. In raw asbestos, 166 tons were shipped direct and the Canadian exports showed 167 tons, but did not take account of 3,972 tons shipped indirectly.

Imports into HUNGARY from Canada are considerably greater in all years than Canadian exports to Hungary. The situation is probably very similar to that between Canada and Czechoslovakia. Asbestos, for example, which probably went via the Netherlands, was imported, according to the Hungarian trade statistics, to the amount of \$16,000 in 1938, while the Canadian statistics show "nil" exports to Hungary. The same applies in raw metals.

Canadian exports to ITALY fell short of Italian imports by some 25 per cent during the years 1937 and 1938. In 1937 this was due to wheat (Canadian exports being 536,000 bushels, and Italian imports 1,275,000 bushels), but in 1938 Canada showed a larger figure than Italy

on this item. Part of the discrepancy in 1938 was due to nickel, of which Italian imports were valued at \$125,000 and Canadian exports at nil. Canadian imports from Italy during the years 1937 and 1938 were greater by a considerable margin than Italian exports to Canada. Items accounting for the excess were olive oil, nuts, lemons, and cherries in brine.

Canadian exports to DENMARK, at \$1,089,000 in 1937, were more than double Danish imports from Canada. Wheat, which made up some 60 per cent of the trade in this direction, was responsible for the largest part of the discrepancy. This was partly due to the crediting of Canadian wheat to the United States by Denmark and partly to the series of transshipments by which Canadian wheat is distributed among European countries. The figures of the Canadian Grain Commissioners for receipts of Canadian grain into Denmark show, in fact, that considerably more Canadian wheat is consumed in Denmark than appears in either Danish or Canadian trade figures. Danish exports to Canada in 1937 were more than double Canadian imports from Denmark.

NORWAY was unlike Denmark in that imports from Canada were greater in 1937 and 1938 than Canadian exports. In 1937 the largest factor in this was wheat; in 1938, nickel. The excess of Norwegian imports of wheat from Canada is due to transshipments through the United Kingdom, and to importations by lighter from Antwerp. In 1937 and 1938 Norwegian exports were slightly greater than Canadian imports from Norway, but on the other hand, in 1936 there was a much larger discrepancy in the opposite direction.

In all recent years imports into SWEDEN from Canada have been less than exports from Canada to Sweden. The difference is particularly great in copper and pneumatic tire casings. Wheat is an exception, the Swedish figures being greater than the Canadian. Canadian imports were slightly more than Swedish exports to Canada in 1937, but the direction and amount of discrepancy in the west-bound trade have varied greatly in recent years.

Canadian exports to FINLAND during each of the years 1937 and 1938 have been less than Finnish imports from Canada by more than a million dollars. The excess of over 200 per cent in the Finnish figures is principally due to wheat, the largest commodity of trade between the two countries. The reason for the discrepancy is the same as in the case of Switzerland.

Imports into JAMAICA from Canada were 7 and 12 per cent higher than Canadian exports to Jamaica during the calendar years 1937 and 1938. Where quantity statistics can be compared a high degree of similarity is shown in the two sets of returns—wheat flour and automobiles, for example, both important Canadian exports, differ by less than 2 per cent in quantity in 1938 but by over 20 per cent in value, with the Jamaican figures the higher. The differences are largely the excess of the Jamaican c.i.f. over the Canadian f.o.b. valuation. In 1937 imports into Canada differed from exports from Jamaica by one-fifth of one per cent, but in 1938 the Jamaican figures showed an excess of some \$250,000. Bananas more than accounted for this difference.

In statistics of trade with TRINIDAD the same factors operate as with Jamaica. Unit values in most commodities are higher in the Trinidad imports than in the Canadian exports. While in general quantities correspond closely, automobiles are an exception, the number exported from Canada being more than fifty per cent greater than imports into Trinidad during the years 1937 and 1938, though the Trinidad unit values were \$160 and \$180 higher, respectively, in the two years.

Exports from Canada to COLOMBIA were less than imports into Colombia from Canada by some \$750,000 in 1937, and by \$250,000 in 1938. Discrepancies in the value of wheat (to which both quantity and price contribute) are responsible, other items—tire casings, newsprint paper, and wrapping paper—showing close agreement. Imports into Canada from Colombia were about a million dollars less than Colombian exports to Canada during each of the years 1937 and 1938. A negligible part of the discrepancy is in the item of crude oil, which makes up three-quarters of the trade, and the greater part is in coffee.

Canadian exports were very close to BRAZILIAN imports during the years 1937 and 1938, while Brazilian exports to Canada were higher than Canadian imports to Brazil. Figures are not available for a comparison by commodities.

Exports from Canada to ARGENTINA have been less than imports into the Argentina from Canada during all recent years. In 1937 the difference was only slightly greater than 10 per cent and may safely be attributed to the excess of c.i.f. Argentine valuation over f.o.b. Canadian

valuation, but in most other recent years the difference has been too great to be accounted for in this way. Newsprint paper, for example, shows a volume of 614,000 cwt. in Canadian exports, and 797,000 cwt. in Argentine imports for 1938. On trade in the other direction, the Canadian figures have likewise been smaller than the Argentine. Usually the amount of discrepancy has been small, but in 1937 Canadian imports from the Argentine at \$6,242,000 stand against \$21,114,000 of Argentine exports to Canada. Investigation by commodities shows that most of the difference occurred in the item of corn, where Argentine exports were 28 million bushels against Canadian imports of 3 million bushels. The explanation of this enormous discrepancy is that in the year 1937 very large quantities of Argentine corn were shipped to the United States via Canada and recorded in the Argentine statistics as destined to Canada. The imports were apparently correctly recorded in the United States statistics, for they show 79,559,000 bushels imported from the Argentine, and only 1,729,000 bushels from Canada.

In spite of the difference between c.i.f. valuation and f.o.b. valuation, Canadian exports to CUBA exceeded Cuban imports by \$800,000 in 1937, and by \$400,000 in 1938. By far the largest item in accounting for the discrepancy was newsprint, in which there is a strong presumption that Cuba credits the United States with most of its imports from Canada. On trade in the other direction Canadian figures are likewise in excess of Cuban. Fibres, tomatoes and fruits are the main items accounting for this, and are probably shown as going to the United States. On the other hand Cuban exports of sugar and tobacco to Canada are somewhat greater than Canadian imports from Cuba. Different types of discrepancies arise in different commodities, depending largely on whether or not the marketing is done in the United States.

Canadian exports to EGYPT have been considerably greater than Egyptian imports from Canada in recent years. In 1937, when the difference was especially great, the main items contributing to the discrepancy were pneumatic tire casings, wheat flour, and inner tubes. Canadian figures are likewise greater in trade in the other direction, the excess of Canadian imports over Egyptian exports ranging around \$150,000 in the last few years, cotton, rice, and onions being largely responsible.

In 1937 Canadian exports to BRITISH INDIA exceeded Indian imports from Canada by \$739,000, and in 1938 by \$269,000. This is in spite of the fact that Indian imports are valued as "at the time and place of importation", while the Canadian exports are f.o.b. the Canadian Customs port. Imports of treasure, (mainly silver bullion) and government stores, neither of which are included in the Indian statistics, explain part of the discrepancy. Automobiles, which represent more than 40 per cent of the trade, show unit values in the Indian imports about 20 per cent higher than in the Canadian exports, which may reasonably be attributed to transportation cost. Canadian imports from India were greater by about ten per cent in the years 1937 and 1938 than Indian exports to Canada. Tea, the largest item, caused the greater part of the discrepancy.

Canadian exports to the STRAITS SETTLEMENTS were less by some \$380,000 than Straits imports from Canada in each of the years 1937 and 1938. This is under 15 per cent of the trade, and in general is due to the difference between f.o.b. and c.i.f. valuation. There is some variation in the discrepancy among the various commodities, commercial motor vehicles and passenger automobiles being higher in the Malayan statistics, while tires and parts for motor vehicles are higher in the Canadian. In the trade in the other direction the discrepancy was 6 per cent in 1937, and 2 per cent in 1938.

NEW ZEALAND imports from Canada, at over \$19,000,000 in each of the years 1937 and 1938 were considerably in excess of the \$14.7 and \$16.4 millions shown in the Canadian statistics as exports to New Zealand. Part of this was without doubt due to the increase in unit value of the goods by the amount of transportation costs. The difference ran through almost the entire list of commodities of trade, including automobiles, wrapping paper, newsprint paper and wheat flour. Trade in the other direction, where there is no reason for difference in valuation, since both Canada and New Zealand take price in New Zealand as the basis, is very close in the accounts of the two countries. In 1937 the difference was 8 per cent, and in 1938, 2 per cent.

Canadian exports to AUSTRALIA were higher in the fiscal years 1937 and 1938 than Australian imports from Canada. The major items of Canadian export, automobiles, newsprint, paper, and unmanufactured wood, which account for more than half of the trade, show close correspondence. On trade in the other direction, the Canadian figures were considerably higher in

1938. Dried fruits and sugar account for much of the Canadian excess, while wool is higher in the Australian exports. It should be noted that the Australian fiscal year ends on June 30, while the Canadian ends on March 31, so that the comparison is not as precise as for the other countries under discussion.

The discrepancies between CHINESE and Canadian statistics have not been consistent from year to year. Imports into China from Canada in 1937, at slightly over \$5 millions, were one-fifth greater than exports from Canada, but in the following year Canadian exports were about the same fraction greater than Chinese imports. Chinese exports to Canada have been consistently less than Canadian imports. Nuts and their products, including walnuts, groundnuts, and groundnut oil, were twice as large in the Canadian imports as in Chinese exports in 1937, and more than three times as large in 1938.

Canadian exports to JAPAN have been less than Japanese imports from Canada by \$4,000,000 in 1937, and by \$5,000,000 in 1938. According to the official trade report Japan values its imports "at the time of their arrival at the point of importation". In bulk commodities in particular the value of ocean freights is considerable, and is clearly revealed in the trade in wheat, paper, and metals. In Canadian imports from Japan the method of valuation representing the value in the principal Japanese markets corresponds fairly closely with the Japanese valuation of exports, and the figures show a discrepancy of only 2 per cent in 1937, and less than 10 per cent in 1938.

Imports into the UNION OF SOUTH AFRICA have, since 1933, been valued at their market price in the country of export, plus packing, etc., and all other expenses incidental to placing the goods on board ship ready for exportation to the Union of South Africa. This is not very different from the valuation given by the Canadian statistics for exports and we find discrepancies of only 2 per cent and 5 per cent in 1937 and 1938, respectively. On trade in the other direction Canadian and South African figures agreed closely for the year 1938, but in 1937 the Canadian imports were higher. Sugar and corn were responsible.

#### PROPORTIONS OF TRADE IN RAW AND MANUFACTURED PRODUCTS

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development imports were made up chiefly of manufactured products and exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed; a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many indus-

# CONDENSED PRELIMINARY TRADE REPORT

tries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported.

STATEMENT SHOWING VALUE AND PROPORTION OF RAW MATERIALS AND PARTLY AND FULLY MANUFACTURED GOODS IMPORTED INTO AND EXPORTED FROM CANADA 1899-1900 TO 1939 AND THE UNITED STATES, 1899-1900 TO 1939

In Canada, grains (chiefly wheat) and in the United States, raw cotton, grains (principally wheat) and raw tobacco are the leading commodities which comprise the bulk of the exports of raw materials. It is of interest to note the results in Canada and the United States when certain staple raw materials of farm origin, which are reproducible annually, are eliminated, such as grains, fresh fruits and vegetables, seeds and raw tobacco, for both countries, and raw cotton for the United States. The results, for the years 1900 to 1939, are set forth in the following table:—

RAW MATERIALS EXPORTED FROM CANADA 1899-1900 TO 1939 AND THE UNITED STATES,

It will be observed from the statistics in the following table showing "Canada's Imports and Exports by Leading Countries, according to Degree of Manufacture", 1939, that Canada's imports from those countries with highly developed manufacturing industries consist of manufactured products and her exports to those countries are made up largely of raw and semi-manufactured products; while on the other hand Canada's trade with countries whose industries are not so highly developed consist chiefly, in the case of imports, of raw and semi-manufactured products and in the case of exports, of manufactured products.

# CONDENSED PRELIMINARY TRADE REPORT

## GOLD IN CANADIAN EXPORT TRADE

Exports of gold in Canadian trade statistics were distinguished in previous reports as between monetary and non-monetary. Monetary gold exports were described as those which entailed a reduction in the Dominion's monetary gold stocks. All other gold exported (classed as non-monetary) was shown as merchandise, and included with the total merchandise exports.

The fact that gold is a money metal gives it peculiar attributes which distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined almost exclusively by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. For these reasons provision was made in previous trade reports for a supplementary table showing exports from Canada excluding all gold.

It is further to be noted, gold does not move in international trade in any direct or normal relation to sales and purchases. It may be bought or sold abroad without moving in or out across the frontier, the sales or purchases in such cases being recognized by simply setting aside or "earmarking" the gold in the vaults of the central bank. Trade statistics deal only with physical movements, sales or purchases of gold which do not involve an actual movement being more properly regarded as an "invisible item" and taken care of in the "International Balance of Payments" statements. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

The publication of statistics showing the *gross* imports and exports of gold has been temporarily suspended as from September, 1939. Statistics for periods prior to this time have been accordingly revised to exclude all gold formerly included in the total of merchandise exports.

Statistics showing the *net* exports of non-monetary gold, including changes in stocks held under earmark, are published as a supplement to the trade figures, and are given below.

## TRADE OF CANADA COMPARED WITH WORLD TRADE

The rising trend of world trade in the years 1933-37 was replaced in 1938 by a definite decline. In 1939 the rising tendency was resumed and the statistics of most countries, like those of Canada, indicate for the year a somewhat greater foreign trade activity than in 1938, though in few cases were the high levels of 1937 attained.

Adverse factors of previous years, which continued to operate during the first eight months of 1939, were the attempts of many countries to balance imports and exports with each country with which they deal, and the formation of trading blocs united by the acceptance of a common currency. These attempts result in a smaller volume of world trade and production and tend to make the smaller production more costly per unit.

An important factor in the world economic situation in 1938 was the heavy United States export balance of trade. While exports at over \$3 billion were not far below their 1937 level, imports fell to less than \$2 billion. The export excess of more than a billion dollars, the flight of nervous funds from European centres, the virtual cessation of United States lending to Europe, which in the previous decade had taken up such a slack, were reflected in an increase in the gold reserve by \$1.8 billions in 1938.

The excess of exports over imports into the United States continued through 1939, amounting to almost \$120 million in the month of October. This unbalancing of the United States trade is an adverse influence on world business. From the latest figures available, the surplus of United States exports continues—December exports being higher than those of any month since March, 1930, while the rise in imports is relatively moderate.

Imports into the United Kingdom in 1939 at £845 million were some 2 per cent less than imports of the preceding year. Exports at £440 million were down £30 million from the previous year's figures. The two months of September and October accounted for more than the decrease in both imports and in exports. The extent of the drop at the beginning of the war is shown in the following statement:—

## IMPORTS AND DOMESTIC EXPORTS OF THE UNITED KINGDOM DURING THE MONTHS FROM AUGUST TO DECEMBER, 1938 AND 1939

	Imports		Exports, United Kingdom Goods	
	1938	1939	1938	1939
	(In Thousands of £ Sterling)			
August.....	74,113	81,097	36,331	37,077
September.....	74,991	49,924	39,809	23,087
October.....	79,079	61,841	42,560	24,623
November.....	77,974	83,988	42,923	37,360
December.....	74,122	84,080	39,099	40,170

It is also apparent from the statement that the increase in the last months of the year more than recovered, both in imports and in exports, the losses sustained at the outbreak of war.

The trade of most of the countries of the world fell in the first two months of war. As ocean transport was adapted to war conditions, and as increased trade of the Allies made up for the lessened trade of Germany, the total of world trade has shown progressive increase to equal or surpass pre-war levels.

The following table shows the imports and exports of forty-six countries over the calendar years 1936-1939. It will be noted that of the 31 countries for which import statistics are available for 1939, 17 showed increases and 14 decreases. In export trade 20 countries registered increases. Canada's imports increased 10.9 per cent, and exports 10.4 per cent in 1939 over 1938. This compares with a decrease of 0.6 per cent and an increase of 0.6 per cent, respectively, for the total of 31 countries for which statistics covering 1939 are available.

## IMPORTS AND DOMESTIC EXPORTS OF 46 COUNTRIES, CALENDAR YEARS 1936-1939

(a) Statistics not available.

**Canada's Position in World Trade.**—Owing to the dislocation of international trade since the outbreak of hostilities and the impossibility of obtaining trade statistics of many countries for 1939, it is futile, if not impossible, to attempt to rate the leading trading countries in

order of importance of the value of their imports and exports. Accordingly, statistics covering these particulars are not published for 1939. The relative position of fourteen countries in 1937 and 1938 is given below:—

Countries	Total Trade		Imports		Domestic Exports	
	Rank		Rank		Rank	
	1937	1938	1937	1938	1937	1938
United Kingdom.....	1	1	1	1	2	2
United States.....	2	2	2	3	1	1
Germany (including Austria).....	3	3	3	2	3	3
France.....	4	4	4	4	5	5
Canada*.....	6	5	8	8	4	4
Japan.....	5	6	5	7	6	6
Belgium.....	7	7	6	6	7	7
Netherlands.....	8	8	7	5	10	9
British India.....	9	9	10	10	9	8
Italy.....	11	10	9	9	15	10
Australia.....	13	11	12	12	12	11
Sweden.....	14	12	11	11	14	12

\* Canada's exports include non-monetary gold for purposes of this table.

### Production and Export, by Countries, of Canada's Principal Export Commodities:—

The trade of Canada is, of course, partly the result of the necessity to procure abroad those commodities which are lacking in Canada or which domestic industry does not supply in sufficient quantity; but perhaps in even greater measure it derives from the Dominion's great wealth of natural resources and productive capacity, which can only be most profitably exploited through wide participation in external markets.

In the production of many important commodities Canada ranks high among the countries of the world. The Dominion is first in the production of asbestos, nickel and newsprint, supplying normally over half the world's asbestos, over eighty per cent of the world's nickel and almost as much newsprint as the next four countries combined. In the production of zinc metal Canada was fourth in 1938, though in zinc ore she was probably not far below Australia which was second only to the United States. In lead and automobiles Canada was fourth and sixth respectively, in copper and gold she was third, in wheat fifth.

Canada was first among the countries of the world during 1938 in exports of newsprint paper, wheat, nickel and asbestos; third in wheat flour and rubber tires; fourth in automobiles and wood pulp. The Dominion also ranks high among the world's exporters of many other products, including lumber and timber, fish, copper, barley, cheese, raw furs, whiskey, meats, farm implements, cattle, gold, silver, rye, oats, rubber footwear, leather and hides.

Statistics covering 1939 are not available in many cases. The following tables give what information it was possible to obtain in time for publication in this report.

### EXPORTS OF AUTOMOBILES FROM PRINCIPAL AUTOMOBILE-PRODUCING COUNTRIES OF THE WORLD

## HISTORICAL SUMMARY OF CANADA'S TRADE BY DECADES

The statements which follow show the long term trend of Canada's imports and exports by commodities and countries in the fiscal years 1890, 1900, 1910, 1920 and the calendar years 1930 and 1939. In the interpretation of trends it should be borne in mind that no individual year is entirely free of abnormalities in some particulars. In the matter of price fluctuations, which affect the significance of trade figures when expressed by value, the Bureau of Statistics index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889; 52.1 in 1899; 59.5 in 1909; 134.0 in 1919; 95.6 in 1929; and 78.6 in 1938. These calendar years approximate the fiscal years shown in the tables following. The fiscal year 1910 was influenced by the general development boom in Western Canada; 1920 was affected by the feverish activity which immediately followed the war; 1930 represented the end of the security inflation period and the beginning of the downturn; while in 1936-37 recovery from the depth of the depression was well established, although world trade in general remained sluggish compared with internal recovery in many countries.

During the period of 50 years covered by the statement following, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus, in 1890, many present-day leading imports, such as crude petroleum, automobiles and parts, artificial silk, electric apparatus and aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000, but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products and meats, have become relatively less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in Canada. Owing to the industrial development of Canada since the beginning of the century many of the leading imports are now raw materials required for Canadian industries.

Over the period of 50 years covered by this statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas and fisheries. Of the six leading exports in 1939, five were unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, lead, aluminium and platinum. Furthermore, expansion in the gold-mining industry has kept pace with that of the aforementioned metals. Most of Canada's gold is sold abroad but the statistics of gross exports have not been published since the outbreak of war (see page 43).
